Pulse Methods in 1D & 2D Liquid-Phase NMR Wallace S. Brey, 2012-12-02 FROM THE PREFACE Pulse Methods in 1D and 2D Liquid Phase NMR is written to enable the practicing NMR spectroscopist to understand and apply the varied and powerful new techniques developed in the past few years for obtaining spectra with greatly increased information content and from smaller and smaller samples The intent is to describe both theory and practice in simple and detailed fashion so that the methods may be critically evaluated and effectively used in any potential application As methods become more complex they require more instrument time and it is important to be able to judge whether the investment of this time is justified It is also essential for the spectroscopist to be in a position to evaluate the capabilities of the instrumentation available as well as the additional requirements for utilization of particular new methods The material in this book assumes a knowledge of continuous wave NMR methods as well as an elementary understanding of the normal pulsed Fourier transform spectroscopic procedures together with a knowledge of such related phenomena as the nuclear Overhauser effect Although much of the treatment is necessarily mathematical this aspect of the presentation has been simplified as much as possible

Organic Structure Determination Using 2-D NMR Spectroscopy Jeffrey H. Simpson,2011-12-30 The second edition of this book comes with a number of new figures passages and problems Increasing the number of figures from 290 to 448 has necessarily added considerable length weight and expense It is my hope that the book has not lost any of its readability and accessibility I firmly believe that most of the concepts needed to learn organic structure determination using nuclear magnetic resonance spectroscopy do not require an extensive mathematical background It is my hope that the manner in which the material contained in this book is presented both reflects and validates this belief

Multinuclear Magnetic Resonance in Liquids and Solids — Chemical Applications P. Granger, Robin K. Harris, 2012-12-06 The idea of this NATO school was born during philosophical discussions with Dr Brevard on the present and future of NMR during a night walk under the palm trees in Biskra during a seminar held in this oasis It was clear for us that the recent progress in the field of NMR especially inverse spectroscopy and the development of MAS was opening new perspectives for chemists We realised also that organometallic and inorganic chemists were not clearly informed about the potentialities of all the new methods NATO with its summer schools was offering a good opportunity to propose to the chemical community a session where those problems would be largely developed This School is then the prolongation of the two previous ones

Palermo in 1976 on the less receptive nuclei and Stirling in 1982 on the multinuclear approach to NMR spectroscopy. It was divided into two sub sessions: NMR in the liquid state and NMR in the solid state. This is reflected in the book organization. As indicated by the title of this School, we were mainly concerned with the methodological aspects of multinuclear NMR. If many examples are given, they appear only as a support for the understanding of the theory or in explanation of some practical aspects of the different experiments. Each domain is introduced by a lecture which presents selected examples.

Solving Problems with NMR Spectroscopy Atta-ur Rahman, Muhammad Iqbal Choudhary, Atia-tul-Wahab, 2015-08-18. Solving Problems with NMR Spectroscopy, Second Edition is a fully updated and revised version of the best selling book. This new edition still clearly presents the basic principles and applications of NMR spectroscopy with only as much math as is necessary. It shows how to solve chemical structures with NMR by giving many new clear examples for readers to understand and try with new solutions provided in the text. It also explains new developments and concepts in NMR spectroscopy including sensitivity problems, hardware and software solutions, and an extension of the multidimensional coverage to 3D NMR. The book also includes a series of applications showing how NMR is used in real life to solve advanced problems beyond simple small molecule chemical analysis. This new text enables organic chemistry students to choose the most appropriate NMR techniques to solve specific structures. The problems provided by the authors help readers understand the discussion more clearly, and the solution and interpretation of spectra help readers become proficient in the application of important modern 1D, 2D, and 3D NMR techniques to structural studies. Explains and presents the most important NMR techniques used for structural determinations. Offers a unique problem solving approach for readers to understand how to solve structure problems. Uses questions and problems including discussions of their solutions and interpretations to help readers understand the fundamentals and applications of NMR. Avoids use of extensive mathematical formulas and clearly explains how to implement NMR structure analysis. Foreword by Nobel Prize winner Richard R Ernst. New to This Edition: Key developments in the field of NMR spectroscopy since the First Edition in 1996. New chapter on sensitivity enhancement, a key driver of development in NMR spectroscopy. New concepts such as Pulse Field Gradients, shaped pulses, and DOSY Diffusion Order Spectroscopy in relevant chapters. More emphasis on practical aspects of NMR spectroscopy such as the use of Shigemi tubes and various types of cryogenic probes. Over 100 new problems and questions addressing the key concepts in NMR spectroscopy. Improved figures and diagrams. More than 180 example problems to solve with detailed solutions provided at the end of each chapter.
