Radiation Spectra Of Radionuclides:

Radiation Spectra of Radionuclides Tom Brooks Metcalfe, 1976 Information includes Gamma energy Beta energy Alpha energy positron energy parent nuclide daughter and half life Published 1976 CRC Handbook of Radioanalytical Chemistry Volume 1 Juraj Tolgyessy, Erno Bujdosó, 2024-11-01 Radioanalytical methods have become among the most important means for elemental analysis and the determination of chemical species Their extreme sensitivity has made them indispensable in a wide range of applications including mineral analysis medical and biophysical work criminology history archaeology and space research This handbook combines theoretical and practical radioanalytical work covering the entire field of radioanalytical chemistry Topics discussed include analysis by activation and nuclear reactions isotope dilution analysis radioreagent methods analysis by absorption and the scattering of radiation The handbook is extremely useful to scientists conducting applied and basic research in subjects related to analytical measurements engineers designing control facilities and equipment and professors and students working with analytical chemistry radiochemistry radioanalytical chemistry environmental chemistry biology and physics **Energy Research Abstracts**, 1988 Radionuclides in the Environment David A. Atwood, 2013-02-19 Nuclear energy is the one energy source that could meet the world's growing energy needs and provide a smooth transition from fossil fuels to renewable energy in the coming decades and centuries It is becoming abundantly clear that an increase in nuclear energy capacity will and probably must take place However nuclear energy and the use of radionuclides for civilian and military purposes lead to extremely long lived waste that is costly and highly problematic to deal with Therefore it is critically important to understand the environmental implications of radionuclides for ecosystems and human health if nuclear energy is to be used to avoid the impending global energy crisis The present volume of the EIC Books series addresses this critical need by providing fundamental information on environmentally significant radionuclides The content of this book was developed in collaboration with many of the authors of the chapters Given the enormity of the subject the Editor and the Authors had to be judicious in selecting the chapters that would appropriately encompass and describe the primary topics particularly those that are of importance to the health of ecosystems and humans The resulting chapters were chosen to provide this information in a book of useful and appropriate length Each chapter provides fundamental information on the chemistry of the radionuclides their occurrence and movement in the environment separation and analyses and the technologies needed for their remediation and mitigation The chapters are structured with a common systematic format in order to facilitate comparisons between elements and groups of elements About EIC Books The Encyclopedia of Inorganic Chemistry EIC has proved to be one of the defining standards in inorganic chemistry and most chemistry libraries around the world have access either to the first or second print edition or to the online version Many readers however prefer to have more concise thematic volumes targeted to their specific area of interest This feedback from EIC readers has encouraged the Editors to plan a series of EIC Books focusing on topics of current interest

They will appear on a regular basis and will feature leading scholars in their fields Like the Encyclopedia EIC Books aims to provide both the starting research student and the confirmed research worker with a critical distillation of the leading concepts in inorganic and bioinorganic chemistry and provide a structured entry into the fields covered This volume is also available as part of Encyclopedia of Inorganic Chemistry 5 Volume Set This set combines all volumes published as EIC Books from 2007 to 2010 representing areas of key developments in the field of inorganic chemistry published in the Encyclopedia of Inorganic Chemistry Find out more

Systems, Decision and Control in Energy IV Artur Zaporozhets,2023-03-01 The concept of energy includes methods for obtaining and using various types of energy for the needs of human society Energy is one of the foundations for the

development of modern society The effectiveness of solving social economic and technical problems as well as the anthropogenic transformations of nature is largely determined by energy production and the scale of energy production Modern energy is not a separate industry but it penetrates widely into other areas in particular chemical transport aerospace construction metallurgy engineering agriculture etc The energy sector is based on complex technical systems that are multicomponent spatially distributed systems that during their operation are affected to a wide range of design and non design thermomechanical loading conditions the effects of aggressive fields and units unauthorized influences operator errors terrorism sabotage and can reach various limit states Complex technical systems are characterized by complex non linear interactions between their constituent elements complex chains scenarios of cause effect relationships between hazardous probabilistic events and processes that occur during their life These scenarios can be implemented over complex ramified scenario trees Ensuring the operational reliability durability and safety of power equipment is a difficult task which is associated with the organization of the reliability of control over the operation of power plants and ensuring optimal conditions for their operation In this regard we can distinguish a whole class of tasks related to the development of control systems diagnostics and monitoring in the energy industry which are presented in this book Of particular relevance now is the use of UAVs in the energy sector Particular attention must be paid to the environmental consequences of the operation of energy facilities the main of which is significant environmental pollution in large cities and industrial areas The development of environmental management information systems is the prerogative of the state corporations and one of the main directions of the national informatization policy A clearly debugged system of environmental monitoring gives a general idea of the features of the current ecological state the main directions of state policy in the field of environmental protection the use of natural resources and environmental safety The methodology and hardware software tools for monitoring the state of the environment presented in the monograph are effective tools for supporting decision making in managing the environmental safety of the atmosphere during its technogenic pollution
