**Radiation-associated Thyroid Carcinoma** Leslie J. DeGroot, 1977      *Radiation-associated Thyroid Carcinoma*, 1977\*

Controversies in Clinical Thyroidology J. I. Hamburger, J. M. Miller, 2012-12-06 Man's natural instinct in fact is never toward what is sound and true. It is toward what is specious and false. The ideas that conquer the race most rapidly and arouse the wildest enthusiasm and are held most tenaciously are precisely the ideas that are most insane. This has been true since the first advanced gorilla put on underwear, cultivated a frown and began his first lecture tour. H. L. Mencken from *Meditation On Meditation in the Smart Set* June 1920 pp 45-46. In our opinion, there is no field of clinical medicine in such a state of dynamic disequilibrium as clinical thyroidology. Thyroid diseases are very common. The moderately complex but easily understandable physiological interrelationships between the thyroid, pituitary and hypothalamus have provided stimuli for the application of modern technology in the development of an array of diagnostic procedures. Although therapeutic methods have been more stable and recent advances more limited, their application by physicians representing different disciplines has provided an ample basis for the expression of differing viewpoints. Unfortunately, there are few opportunities for in-depth exploration of different attitudes and experience relevant to issues of current interest. The review process employed by medical journals often seems to stifle the expression of controversial viewpoints.      **Radiation**

**And Thyroid Cancer** Anna Karaoglou, G. Thomas, E. D. Williams, 1999-03-12 The considerable increase in the incidence of thyroid cancer in children in areas exposed to the fallout from the Chernobyl nuclear reactor accident has drawn attention to the need for a better understanding of the relationship between radiation exposure, especially from the radionuclides of iodine, and the risk of thyroid cancer. An increase in thyroid cancer has been reported both in patients exposed to therapeutic and diagnostic external radiation and in the population exposed to radiation from the Hiroshima and Nagasaki atomic bombs. While there is no evidence of a significant increase of this cancer in patients treated with radioactive iodine, an increase in thyroid cancer incidence was found in the Marshall Islands population after exposure to the fallout from a thermonuclear explosion, and now an increase has been observed in children exposed to the fallout from Chernobyl. This volume constitutes the proceedings of the first international conference on the relationship between radiation and thyroid cancer, a very important area of research. Besides addressing the link between radiation and thyroid cancer, it examines the many factors influencing the interactions between radiation and the thyroid cell.      **Carcinogenesis Abstracts**, 1977      **Thyroid**

**Cancer and Nuclear Accidents** Shunichi Yamashita, Geraldine Thomas, 2017-03-29 *Thyroid Cancer and Nuclear Accidents: Long Term Aftereffects of Chernobyl and Fukushima* discusses the radiobiological effects of the release of radioiodine from two nuclear power plant accidents and appropriate interpretation of the results of thyroid ultrasound examination. The book pulls together expert opinion on radiation-related thyroid cancer in an understandable manner, even for non-thyroidologists. The book explains what has been learned from both accidents in relation to prevention of thyroid cancer following nuclear

power plant accidents The book encompasses topics such as risk estimations of thyroid cancer following nuclear accidents and clinical aspects after those specific situations Additionally it discusses in detail the reports from Fukushima related to thyroid cancer in the population This book is a valuable resource for oncologists and biomedical researchers with interest in nuclear accidents and cancer cases Offers an overview of the major cancer reports from the Chernobyl and Fukushima disasters Encompasses authoritative data and interpretation of the thyroid screening program in Japan Presents the content in a didactic way to help readers interpret and explain the topic to non experts Discusses risk estimations of thyroid cancer following nuclear accidents
