Radiative Decay Engineering:

Radiative Decay Engineering Chris D. Geddes, Joseph R. Lakowicz, 2005-05-04 During recent years our enthusiasm for this field has continually increased This book presents expert contributions describing the fundamental principles for the widespread use of radiative decay engineering in the biological sciences and nanotechnology Topics in Fluorescence Spectroscopy: Radiative decay engineering Joseph R. Lakowicz, 1991 **Fluorescence of Supramolecules, Polymers, and Nanosystems** Mario N. Berberan-Santos, 2007-11-04 This the fourth volume in the Springer series on fluorescence focuses on the fluorescence of nanosystems polymers and supramolecules as well as the development and application of fluorescent probes Aimed at researchers in organic and physical chemistry and in material sciences emphasis is placed on the fluorescence of artificial and biological nanosystems single molecule fluorescence and the luminescence of polymers and micro and nanoparticles and nanotubes *Drug Discovery Handbook* Shayne Cox Gad, 2005-06-24 The Drug Discovery Handbook gives professionals a tool to facilitate drug discovery by bringing together for the first time in one resource a compendium of methods and techniques that need to be considered when developing new drugs This comprehensive practical guide presents an explanation of the latest techniques and methods in drug discovery including Genomics proteomics high throughput screening and systems biology Summaries of how these techniques and methods are used to discover new central nervous system agents antiviral agents respiratory drugs oncology drugs and more Specific approaches to drug discovery including problems that are encountered solutions to these problems and limitations of various methods and techniques The thorough coverage and practical scientifically valid problem solving approach of Drug Discovery Handbook will serve as an invaluable aid in the complex task of developing new drugs **Comprehensive Nanoscience and Technology** , 2010-10-29 From the Introduction Nanotechnology and its underpinning sciences are progressing with unprecedented rapidity With technical advances in a variety of nanoscale fabrication and manipulation technologies the whole topical area is maturing into a vibrant field that is generating new scientific research and a burgeoning range of commercial applications with an annual market already at the trillion dollar threshold The means of fabricating and controlling matter on the nanoscale afford striking and unprecedented opportunities to exploit a variety of exotic phenomena such as quantum nanophotonic and nanoelectromechanical effects Moreover researchers are elucidating new perspectives on the electronic and optical properties of matter because of the way that nanoscale materials bridge the disparate theories describing molecules and bulk matter Surface phenomena also gain a greatly increased significance even the well known link between chemical reactivity and surface to volume ratio becomes a major determinant of physical properties when it operates over nanoscale dimensions Against this background this comprehensive work is designed to address the need for a dynamic authoritative and readily accessible source of information capturing the full breadth of the subject Its six volumes covering a broad spectrum of disciplines including material sciences chemistry physics and life sciences have been written

and edited by an outstanding team of international experts Addressing an extensive cross disciplinary audience each chapter aims to cover key developments in a scholarly readable and critical style providing an indispensable first point of entry to the literature for scientists and technologists from interdisciplinary fields The work focuses on the major classes of nanomaterials in terms of their synthesis structure and applications reviewing nanomaterials and their respective technologies in well structured and comprehensive articles with extensive cross references It has been a constant surprise and delight to have found amongst the rapidly escalating number who work in nanoscience and technology so many highly esteemed authors willing to contribute Sharing our anticipation of a major addition to the literature they have also captured the excitement of the field itself in each carefully crafted chapter Along with our painstaking and meticulous volume editors full credit for the success of this enterprise must go to these individuals together with our thanks for largely adhering to the given deadlines Lastly we record our sincere thanks and appreciation for the skills and professionalism of the numerous Elsevier staff who have been involved in this project notably Fiona Geraghty Megan Palmer and Greg Harris and especially Donna De Weerd Wilson who has steered it through from its inception We have greatly enjoyed working with them all as we have with each other

Surface Plasmon Enhanced, Coupled and Controlled Fluorescence Chris D. hyperbolic metamaterials and photonic crystals Reviews in Fluorescence 2006 Chris D. Geddes, Joseph R. Lakowicz, 2007-02-05 This is the third volume in the Reviews in Fluorescence series To date two volumes have been both published and well received by the scientific community Several book reviews have also favorably described the series as an excellent compilation of material which is well balanced from authors in both the US and Europe Of particular mention we note the recent book review in JACS by Gary Baker Los Alamos In this 3rd volume we continue the tradition of publishing leading edge and timely articles from authors around the world We hope you find this volume as useful as past volumes which promises to be just as diverse with regard to content Finally in closing we would like to thank Dr Kadir Asian for the typesetting of the entire volume and our counterparts at Springer New York for its timely publication Professor Chris D Geddes Professor Joseph R Lakowicz August 20 2005 **Reviews in Fluorescence 2004** Chris D. Geddes, Joseph R. Lakowicz, 2012-11-08 Reviews in Fluorescence 2004 the first book of a new book series from Springer is a collection of current trends and emerging hot topics in the field of Fluorescence This annual review series differs from Springer's current Topics in Fluorescence series in that it is more specialized and includes reviews of an individual's own work or scientific perspective Reviews in Fluorescence will therefore complement the other fluorescence titles published by Springer whilst feeding the requirement from the fluorescence community for annual informative updates and developments Key features Reviews in Fluorescence will be citable indexed and available both in print and online Reviews in Fluorescence will be published annually Reviews in Fluorescence will comprise invited review articles that summarize the yearly progress in fluorescence Alternate years will publish the Invited Papers from the Methods and Applications in Fluorescence conference series MAFS Plasmonic Control of Light Emission Young Chul Jun, 2010 Enhanced light-matter interactions in light confining structures such as optical cavities have been extensively investigated for both fundamental studies and practical applications Plasmonic nanostructures which can confine and manipulate light down to 1 nm scale are becoming increasingly important Many areas of optical physics and devices can benefit from such extreme light concentration and manipulation For example fluorescent molecule or quantum dot (QD) emission can be strongly modified and controlled via surface plasmon polariton (SPP) coupling In this dissertation we present our theoretical and experimental studies on QD emission in metal nanogap structures that can provide extreme field concentration enhancing light-matter interactions significantly We start with a theoretical analysis of dipole emission in metal dielectric metal (MDM) waveguide structures We look at both infinite i.e. planar and finite thickness MDM structures We find that both structures exhibit strong spontaneous emission enhancements due to the tight confinement of modes between two metallic plates and that light emission is dominated by gap SPP coupling For planar structures we present analytical solutions for the enhanced dipole decay rate while for finite thickness MDM structures i.e. nanoslits we present results from numerical simulations Next we present our experiments on the SPP coupling of CdSe/ZnS QD emission in metal nanoslits First we observed clear lifetime and polarization state changes of QD emission

with slit width due to gap SPP excitation Second with optimized side grooves i e combined slit groove and hole groove structures we collimated QD emission vertically into a very narrow angle achieving an unprecedented level of directionality control and visualized it with confocal scanning microscopy Third by using two metal plates as electrodes we dynamically modulated the QD emission intensity and wavelength with external voltage Finally we extend our dipole emission calculation to several slot waveguide structures We consider light emission in metal slots metal oxide Si slots and Si slot waveguides We find that large spontaneous emission enhancements can be obtained over a broad range of wavelengths and that light emission is strongly funneled into slot waveguide modes These represent broadband waveguide QED quantum electro dynamics systems which have unique merits for on chip light sources and quantum information processing These theoretical and experimental studies show that the SPP coupling of light emission is a very promising way to control light emission properties and may find broad application in spectroscopy sensing optoelectronics and integrated optics
