Radio Circuits and Signals I... S. Gonorovskij, 1974 Radio Circuits and Signals I. S. Gonorovsky, 1981 **Radio Circuits and Signals** Иосиф Семенович Гоноровский, 1981 Performance Optimization Techniques in Analog, Mixed-Signal, and Radio-Frequency Circuit Design Fakhfakh, Mourad, Tlelo-Cuautle, Esteban, Fino, Maria Helena, 2014-10-31

Improving the performance of existing technologies has always been a focal practice in the development of computational systems. However, as circuitry is becoming more complex, conventional techniques are becoming outdated, and new research methodologies are being implemented by designers. *Performance Optimization Techniques in Analog Mixed Signal and Radio Frequency Circuit Design* features recent advances in the engineering of integrated systems with prominence placed on methods for maximizing the functionality of these systems. This book emphasizes prospective trends in the field and is an essential reference source for researchers, practitioners, engineers, and technology designers interested in emerging research and techniques in the performance optimization of different circuit designs.

Circuits, Signals, and Systems William McC. Siebert, 1986. These twenty lectures have been developed and refined by Professor Siebert during the more than two decades he has been teaching introductory Signals and Systems courses at MIT. The lectures are designed to pursue a variety of goals in parallel to familiarize students with the properties of a fundamental set of analytical tools to show how these tools can be applied to help understand many important concepts and devices in modern communication and control engineering practice; to explore some of the mathematical issues behind the powers and limitations of these tools; and to begin the development of the vocabulary and grammar, common images and metaphors of a general language of signal and system theory. Although broadly organized as a series of lectures, many more topics and examples as well as a large set of unusual problems and laboratory exercises are included in the book than would be presented orally. Extensive use is made throughout of knowledge acquired in early courses in elementary electrical and electronic circuits and differential equations.

Contents: Review of the classical formulation and solution of dynamic equations for simple electrical circuits. The unilateral Laplace transform and its applications. System functions. Poles and zeros. Interconnected systems and feedback. The dynamics of feedback systems. Discrete time signals and linear difference equations. The unilateral Z transform and its applications. The unit sample response and discrete time convolution. Convolutional representations of continuous time systems. Impulses and the superposition integral.
