Rethinking A Bayesian Course with Examples in R and Stan builds readers knowledge of and confidence in statistical
modeling Reflecting the need for even minor programming in today s model based statistics the book pushes readers to
perform step by step calculations that are usually automated This unique computational approach ensures that readers
understand enough of the details to make reasonable choices and interpretations in their own modeling work The text
presents generalized linear multilevel models from a Bayesian perspective relying on a simple logical interpretation of
Bayesian probability and maximum entropy It covers from the basics of regression to multilevel models The author also
discusses measurement error missing data and Gaussian process models for spatial and network autocorrelation By using
complete R code examples throughout this book provides a practical foundation for performing statistical inference Designed
for both PhD students and seasoned professionals in the natural and social sciences it prepares them for more advanced or
specialized statistical modeling Web Resource The book is accompanied by an R package rethinking that is available on the
author s website and GitHub The two core functions map and map2stan of this package allow a variety of statistical models
