Freshwater and Marine Aquarium, 2008 Selection and Breeding Programs in Aquaculture Trygve Gjerdem, 2005-04-13 Although aquaculture as a biological production system has a long history systematic and efficient breeding programs to improve economically important traits in the farmed species have rarely been utilized until recently except for salmonid species This means that the majority of aquaculture production more than 90 % is based on genetically unimproved stocks In farm animals the situation is vastly different practically no terrestrial farm production is based on genetically unimproved and undomesticated populations This difference between aquaculture and livestock production is in spite of the fact that the basic elements of breeding theory are the same for fish and shellfish as for farm animals One possible reason for the difference is the complexity of reproductive biology in aquatic species and special consideration needs to be taken in the design of breeding plans for these species Since 1971 AKVAFORSK has continuously carried out large scale breeding research projects with salmonid species and during the latest 15 years also with a number of fresh water and marine species Results from this work and the results from other institutions around the world have brought forward considerable knowledge which make the development of efficient breeding programs feasible The genetic improvement obtained in selection programs for fish and shellfish is remarkable and much higher than what has been achieved in terrestrial farm animals *Molecular Research in Aquaculture* Ken Overturf, 2009-07-23 *Molecular Research in Aquaculture* Molecular research and biotechnology have long been fields of study with applications useful to aquaculture and other animal sciences *Molecular Research in Aquaculture* looks to provide an understanding of molecular research and its

applications to the aquaculture industry in a format that allows individuals without prior experience in this area to learn about and understand this important field Molecular Research in Aquaculture opens with an introductory chapter giving background information on the aquaculture industry and the development of the science and research methods to what is currently being used From there it discusses how new innovative techniques are now being converted and used for research in this field Introductory chapters on basic molecular biological techniques such as PCR cloning and hybridization and their rationale provide the foundation for an in depth look at molecular research and its specific applications The remaining chapters review key areas of molecular research such as microarray analysis quantitative PCR and transgenics Molecular Research in Aquaculture will be a valuable reference for professionals and researchers with an interest in the development of molecular technologies and their applications to the field of aquaculture Coverage of basic molecular biological techniques and their rationale In depth look at molecular research and their applications to aquaculture Valuable reference on the developments of this key area in aquaculture research **Water Life and Aquaria World** ,1952
