Developments in Laser Techniques and Applications to Fluid Mechanics R.J. Adrian, D.F.G. Durao, Franz Durst, M.V. Heitor, M. Maeda, J. Whitelaw, 2012-12-06. This volume comprises a selection of the best papers presented at the Seventh International Symposium on Applications of Laser Techniques to Fluid Mechanics held at The Calouste Gulbenkian Foundation in Lisbon during the period of July 11 to 14, 1994. The papers describe Applications to Fluid Mechanics, Applications to Combustion, Instrumentation for Velocity and Size Measurements, and Instrumentation for Whole Field Velocity, and demonstrate the continuing and healthy interest in the development of understanding of the methodology and implementation in terms of new instrumentation. The prime objective of this Seventh Symposium was to provide a forum for the presentation of the most advanced research on laser techniques for flow measurements and communicate significant results to fluid mechanics. The applications of laser techniques to scientific and engineering fluid flow research was emphasized, but contributions to the theory and practice of laser methods were also considered where they facilitate new improved fluid mechanic research. Attention was placed on laser Doppler anemometry, particle sizing, and other methods for the measurement of velocity and scalar such as particle image velocimetry and laser induced fluorescence. We would like to take this opportunity to thank those who participated. The assistance provided by the Advisory Committee by assessing abstracts was highly appreciated.

Laser Doppler and Phase Doppler Measurement Techniques H.-E. Albrecht, Nils Damaschke, Michael Borys, Cameron Tropea, 2013-04-17. Providing the first comprehensive treatment, this book covers all aspects of the laser Doppler and phase Doppler measurement techniques, including light scattering from small particles, fundamental optics, system design, signal and data processing, tracer particle generation, and applications in single and two phase flows. The book is intended as both a reference book for more experienced users as well as an instructional book for students. It provides ample material as a basis for a lecture course on the subject and represents one of the most comprehensive treatments of the phase Doppler technique to date. The book will serve as a valuable reference book in any fluid mechanics laboratory where the laser Doppler or phase Doppler techniques are used. This work reflects the authors' long

practical experience in the development of the techniques and equipment as the many examples confirm A Research Laser Weather Identification Instrument K. B.
