Science Research Writing: For Native And Non-native Speakers Of English (Second Edition) Hilary Glasman-deal, 2020-11-27 This book enables STEM researchers to write effective papers for publication as well as other research related texts such as a doctoral thesis technical report or conference abstract Science Research Writing uses a reverse engineering approach to writing developed from extensive work with STEM researchers at Imperial College London This approach unpacks current

models of STEM research writing and helps writers to generate the writing tools needed to operate those models effectively in their own field. The reverse engineering approach also ensures that writers develop future proof strategies that will evolve alongside the coming changes in research communication platforms. The Second Edition has been extensively revised and updated to represent current practice and focuses on the writing needs of both early stage doctoral STEM researchers and experienced professional researchers at the highest level whether or not they are native speakers of English. The book retains the practical user friendly format of the First Edition and now contains seven units that deal separately with the components of written STEM research communication: Introduction, Methods, Results, Discussion, Conclusion, Abstract, and Title, as well as extensive FAQ responses and a new Checklist and Tips section. Each unit analyses extracts from recent published STEM journal papers to enable researchers to discover not only what to write but crucially how to write it. The global nature of science research requires fast accurate communication of highly complex information that can be understood by all participants. Like the First Edition, the Second Edition is intended as a fast do it yourself guide to make both the process and the product of STEM research writing more effective.
