**Connecting People with Technology** George Hayhoe, Helen M. Grady, 2020-11-25 This book explores five important areas where technology affects society and suggests ways in which human communication can facilitate the use of that technology Usability has become a foundational discipline in technical and professional communication that grows out of our rhetorical roots which emphasize purpose and audience As our appreciation of audience has grown beyond engineers and scientists to lay users of technology

our appreciation of the diversity of those audiences in terms of age geography and other factors has similarly expanded We are also coming to grips with what Thomas Friedman calls the flat world a paradigm that influences how we communicate with members of other cultures and speakers of other languages And because most of the flatteners are either technologies themselves or technology driven technical and professional communicators need to leverage these technologies to serve global audiences Similarly we are inundated with information about world crises involving health and safety issues These crises are driven by the effects of terrorism the aging population HIV AIDS and both human made and natural disasters These issues are becoming more visible because they are literally matters of life and death Furthermore they are of special concern to audiences that technical and professional communicators have little experience targeting the shapers of public policy seniors adolescents and those affected by disaster Biotechnology is another area that has provided new roles for technical and professional communicators We are only beginning to understand how to communicate the science accurately without either deceiving or panicking our audience We need to develop a more sophisticated understanding of how communication can shape reactions to biotechnology developments Confronting this complex network of issues we re challenged to fashion both our message and the audience s perceptions ethically Finally today s corporate environment is being shaped by technology and the global nature of business Technical and professional communicators can play a role in capturing and managing knowledge in using technology effectively in the virtual workplace and in understanding how language shapes organizational culture

**Making Knowledge Visible** Elizabeth Orna, 2017-03-02 This ground breaking book opens up new territory for knowledge and information management The only way we can make what we know visible to other people is by putting it into Information Products the products in any medium where users meet the information they need and gain access to the knowledge of others Without them little business would get done inside organizations or between them and the outside world They are essential for the flow exchange application and preservation of information and knowledge This is the first book to make the case for the proper recognition of information products by organizations It shows how they should support business objectives and processes and be incorporated into information strategy and information architecture illustrates the value they can both add and subtract identifies the full range of stakeholders in them and argues that a triple alliance of information management information systems IT and information design is critical for successful information products Stories from real life illustrate every step of the argument The final part of the book demonstrates how an actual organization used information auditing as a tool to develop a strategic information product for an important user community

People and Computers XX - Engage Nick Bryan-Kinns,Ann Blandford,Paul Curzon,Laurence Nigay,2007-08-10 Reading has arguably the longest and richest history of any domain for scientifically considering the impact of technology on the user From the 1920s to the 1950s Miles Tinker 1963 and other researchers ran hundreds of user tests that examined the effects of different fonts and text layout variables such as the amount of vertical space between each line of text called leading Their research focused on user performance and reading speed was the favoured measure They charted the effect of the manipulated variables on reading speed looking for the point at which their participants could read the fastest Their assumption was that faster reading speeds created a more optimal experience Printers and publishers eagerly consumed this research In recent years some of these variables have been reexamined as the technology and capabilities evolve with the advent of computers and computer screens Dillon 1992 examined how to design textual information for an electronic environment Boyarski et al 1998 examined the effect of fonts that were designed for computer screens Dyson Kipping 1998 examined the effect of line length on computer screens Larson et al 2000 examined the effect of 3 D rotation on reading Gugerty et al 2004 demonstrated a reading performance advantage with the Microsoft ClearType display technology
