Minimum technical standards and recommendations for spinal cord injury management in emergencies World Health Organization, 2025-02-18 Health emergencies that cause large numbers of traumatic injuries can result in surges of spinal cord injuries SCI in a short period of time that can easily overwhelm health system capacities Limited specialized services lack of awareness or knowledge of SCI management and weak coordination mechanisms may lead to significant delays in appropriate care for patients who have sustained a SCI resulting in preventable and potentially life threatening complications Correct initial management of patients with SCI is vital to long term survival and quality of life This document complements the guidance provided by the WHO EMT publication Classification and minimum standards for emergency medical teams and has been developed to inform about the often unmet need for SCI care in emergencies It provides practical guidance on additional components of SCI specific emergency care for Member States ministries of health national and international EMTs and other key stakeholders wishing to build and enhance specialist SCI management surge capacity and capability and defines minimum standards for the development and classification of respective specialized care teams SCTs within the EMT framework

Physical Management for Neurological Conditions E-Book Maria Stokes, Emma Stack, 2011-04-19 The third edition of this popular textbook formerly Physical

Management in Neurological Rehabilitation and now renamed Physical Management for Neurological Conditions maintains its scientific and research base with extensive use of references and case studies. It is the only book for physiotherapists that offers a comprehensive overview of the basic principles of neurological rehabilitation, specific neurological neuromuscular conditions, and the related physiotherapy treatment approaches used. Important areas which feature throughout are discussed in relation to the different neurological conditions and include a non-prescriptive multidisciplinary problem-solving approach to patient management, involvement of the patient and carer in goal setting and decision making, client-centred practice, use of outcome measures to evaluate the effects of treatment in everyday practice, use of case studies to illustrate clinical practice, scientific evidence of treatment effectiveness. Additional specialist editor Dr Emma Stack. Refined content but with the inclusion of 4 brand new chapters: an introductory chapter on rehabilitation in practice, one on respiratory management, and two covering self-management and falls under the section entitled Skill Acquisition and Learning. 11 new expert contributors join the reduced contributor team of 31.

Management of Spinal Cord Injuries Lisa Harvey, 2008-01-10. Combining 25 years of clinical research and teaching experience, Dr Lisa Harvey provides an innovative 5-step approach to the physiotherapy management of people with spinal cord injury. Based on the International Classification of Functioning, this approach emphasises the importance of setting goals which are purposeful and meaningful to the patient. These goals are related to performance of motor tasks analysed in terms of 6 key impairments. The assessment and treatment performance of each of these impairments for people with spinal cord injury is described in the following chapters: training motor tasks, strength training, contracture management, pain management, respiratory management, cardiovascular fitness training. Dr Harvey develops readers' problem-solving skills, equipping them to manage all types of spinal cord injuries. Central to these skills is an understanding of how people with different patterns of paralysis perform motor tasks and the importance of different muscles for motor tasks such as transfers and bed mobility of people, wheelchair mobility, hand function for people with tetraplegia, standing and walking with lower limb paralysis. This book is for students and junior physiotherapists with little or no experience in the area of spinal cord injury but with a general understanding of the principles of physiotherapy. It is also a useful tool for experienced clinicians including those keen to explore the evidence base that supports different
