Climate Change on U.S. Transportation Committee on Climate Change and U.S. Transportation,Division on Earth and Life Studies,2008-07-16 While every mode of transportation in the U S will be affected as the climate changes potentially the greatest impact on transportation systems will be flooding of roads railways transit systems and airport runways in coastal

areas because of rising sea levels and surges brought on by more intense storms says a new report from the National Research Council. Though the impacts of climate change will vary by region, it is certain they will be widespread and costly in human and economic terms and will require significant changes in the planning, design, construction, operation, and maintenance of transportation systems. The U.S. transportation system was designed and built for local weather and climate conditions predicated on historical temperature and precipitation data. The report finds that climate predictions used by transportation planners and engineers may no longer be reliable, however, in the face of new weather and climate extremes. Infrastructure pushed beyond the range for which it was designed can become stressed and fail, as seen with the loss of the U.S. 90 Bridge in New Orleans after Hurricane Katrina.
