Bunting,2013-01-25 Aquaculture is the farming of aquatic organisms principally fish molluscs crustaceans and marine algae It has seen phenomenal worldwide growth in the past fifty years and many people view it as the best solution for the provision of high quality protein to feed the world's growing population particularly with the rapid decline in wild marine fish populations Aquaculture now contributes approximately one third of the world's fish production and has increased by about eight per cent annually over the last thirty years while wild capture fishery production has remained static Focused on developing more sustainable aquaculture practices this book provides an ideal advanced level textbook It is based on extensive evidence and knowledge of best practices with guidance on appropriate adaptation and uptake in a variety of environmental geographic socio economic and political settings The author concentrates on low impact aquaculture systems and approaches which have minimal adverse effects on the environment He also emphasizes socially responsible and equitable aquaculture development to enhance the natural resource base and livelihoods Drawing on a range of case studies from around the world the objective is to show where progress in terms of developing ecologically sound and socially responsible forms of aquaculture has been made A tool box of approaches to support widespread adoption and appropriate adaptation of regenerating aquaculture strategies is provided ensuring the book will have practical relevance for both students and professionals General Technical Report NE ,1980

Joshi, Sonali Paul, Rita Kundu, 2024-03-29 The eco friendly remediation technologies for the degraded environment are indeed the need of the hour Even though the regulatory mechanisms are in place to control the discharge of untreated contaminants into the natural environment still we could see a different picture hence remediation and restoration of the environment becomes an ardent requisite The present day fast pace of industrialization without proper disposal planning is impacting the water bodies adversely generating the need for green management technologies It is worth mentioning that these environment friendly technologies are most cost effective as well The advancements in biotechnology have paved the way to mitigate the problem The primary audience of this book are the students and researchers who are working in the field of toxicology and bioremediation of aquatic environments We have primarily focused in this book on bioremediation of aquatic system toxicity considering this as an environment friendly system and having the least adverse effects Hence this book aims to bring forward together on a single platform the latest research in aquatic resource management which includes the discussions and discourses on the degradation and the effect and the remediation This book includes a discussion on the different sources of contamination from industries or by the usage of commercial pesticides or even fertilizers These contaminants if discharged in their toxic form as effluent cause harm to the aquatic systems and the subsoil and create the possibility of groundwater contamination This book includes a discussion on the different routes of contamination and the food chain transport possibilities of pesticide pollutants which are very contemporary and required topics of research It also includes relevant discussions on how to get rid of the toxicity
