Neuroengineering Daniel J. DiLorenzo, Joseph D. Bronzino, 2007-12-07 Based on a foundation of science and empirical observation engineering research and design has brought science fiction into science fact The convergence of neuroscience and technology is facilitating the development of therapies that not long ago would have seemed unimaginable if not impossible With contributions from pioneers in industry acad *Art Therapy in Response to Natural Disasters, Mass Violence, and Crises* Joseph Scarce, 2021-12-21 With contributions from a range of expert voices within the field this book explores the use of art therapy as a response to traumatic events Offering rare insight into ways in which art therapists have responded to recent crises this is a unique resource for art therapists looking to coordinate interventions for large scale disaster and resulting trauma Chapters address a range of environmental and manmade disasters around the world including hurricanes typhoons wildfires mass shootings and forced migration highlighting the impact of an art therapy approach in dealing with widespread trauma Covering both community and individual cases it provides an in depth view into the

challenges of working in these settings including the effects on the therapist themselves and offers practical information on how to coordinate fund and maintain responses in these environments The first book to focus on disaster response in art therapy this will be an invaluable contribution to the field in an increasingly vital area Multifunctional Nanomaterials: Role and Perspectives in Combination Therapies Against Cancer Wang Zheng,Junjie Li,Jinbing Xie,2022-06-30 **Smart Stimuli-responsive Biomaterials for Programmed Drug Delivery, 2nd edition** Seyed Morteza Naghib,Ali Maleki,Yasser Zare , Kyong Rhee,2024-08-29 Most drugs are toxic to cells that often kill healthy cells and establish several side effects Conventional chemotherapy cargoes are not tumor specific and commonly their nature leads to significant toxic effects on healthy tissues Therefore several drug delivery systems DDSs were developed to amend the therapeutic properties of drugs and made them safer and more effective Local drug delivery which decreases systemic drug exposure is an important approach for maximal efficacy high levels of patient compliance and fewer side effects Smart drug delivery systems SDDSs have gained much attention and paved the way for more effective treatment of patients SDDSs with stimuli responsive characteristics are determined as the process that the payloads are not released before reaching the target site This triggered release occurs due to the variations in the nano microcarrier chemistry and structure in response to endogenous and or exogenous stimulus establishing the release of the cargoes to the exact place Responsive and smart materials biomaterials are responsive sensitive to signals originating from physiological systems or to abnormalities originating from pathological defects that can interact with or be triggered by the biological environments and are interesting in drug delivery platforms devices for developing next generation accurate medicines In exogenous triggered delivery drug gene release is controlled by external stimulus which can be controlled exactly Different exogenous triggers have been reported such as light magnetic field temperature electrical field and ultrasound The endogenous triggers such as pH redox enzyme concentration and bio molecules are related to the disease s pathological characteristics Disease pathological characteristics are key parameters as physiological triggers for designing programmed delivery devices that may be used for the non invasive and effective treatment of a wide range of pathological conditions such as cancer infections diabetes cardiovascular diseases autoimmune disorders stroke and chronic wounds and degenerative diseases Endogenously triggered drug release is the same as exogenously triggered drug release which can lead to enhanced release of therapeutic molecules at the target place in its therapeutic concentration reducing local toxicity and side effects reducing the need for repeat administrations and increasing patient compliance Here we focused on smart endogenous and exogenous stimuli responsive biomaterials for programmed drug delivery The conventional drug delivery systems are not without any limitations and challenges One of the most important challenges is related to their degradability or insufficient biocompatibility of most materials which are used in smart delivery system Another challenge is related to the using of 2D in vitro models or in vivo animal studies to evaluate the performance of these systems and there is a poor relation between such results and human clinical trials Thus these

incompatibilities can lead to the failing of the numerous smart systems in clinical studies In this special issue we focus on smart multi responsive drug delivery systems that can address some challenges and drawbacks Research paper commutation letter mini review and review are acceptable for publications in this special issue Main topics 1 Smart exogenous triggered delivery systems 2 Smart endogenous triggered delivery systems 3 Multi responsive targeted vehicles 4 Stimuli responsive niosomes and liposomes 5 Multifunctional biomaterials for cancer treatment 6 Smart 3D and 4D scaffolds for localized delivery systems
