Contemporary Theory of Conservation Salvador Munoz-Vinas, 2012-05-23 Classical theories of conservation are well known in the heritage community but in the last two decades thinking has shifted and classical theory has faced increasing criticism Contemporary Theory of Conservation brings together current ideas in conservation theory presenting a structured coherent analysis of the subject for the first time This engaging and readable text is split into 3 parts The first Fundamentals of conservation addresses the identity of conservation itself and problems arising when classical conservation theories are applied The second part Questioning classical theories delves deeper into the criticism of classical ideas such as reversibility This leads on to the creation of new paradigms such as sustainability which are covered in the final part of the book Conservation ethics Interior, Environment, and Related Agencies Appropriations for 2014: Justification of the budget estimates: National Park Service; U.S. Geological Survey United States. Science-based conservation of tigers: Assessing the past to prepare for the future Carlos

Ruiz-Miranda,Fernanda Michalski,Vanessa Hull,Miha Krofel,Luke Hunter,Zuofu Xiang,2024-06-13 In this Research Topic we plan to assess the interface of conservation and science looking at the various aspects of tiger conservation by assessing what advances have been made in each relevant field where are the limitations and what does the data show us about successes and failures in conserving tigers their prey and their habitat Through a series of multiple authored papers we plan to explore the realms of tiger and prey monitoring law enforcement habitat restoration efforts human tiger conflicts landscape connectivity and ultimately how tiger conservation strategies have evolved and emerged leading up to the present Coming at this critical time with 2022 being the Year of the Tiger and the end of a 12 year pledge by Tiger Range Countries to double tiger numbers this Research Topic will provide a landmark publication reflecting back on the past 12 and more years of tiger conservation and research and laying the foundation for the coming twelve years While the focus is on tigers the studies will have wide application to efforts to conserve other large bodied carnivores In 2010 the lunar year of the tiger a Tiger Summit was held in the Russian city of St Petersburg where 13 Tiger Range Countries pledged to double tiger numbers by the next lunar year of the tiger in 2022 The science of tiger conservation has developed in multiple ways over the past twelve years As we approach this benchmark when tiger range countries will be reporting on their past efforts and planning for the next twelve years it is important to assess what has been accomplished and what yet needs to be done where there have been successes and what has not worked This is why it is particularly important to employ a science based approach to conservation something that is not universally adopted by tiger conservation advocates but which we as editors of this collection consider central to successful tiger conservation This Research Topic will lay the foundation for effective science based conservation of tigers for the next twelve years In 2021 a collection of representatives from the international tiger conservation community developed a joint NGO vision of priorities in tiger conservation for the coming twelve years In this Research Topic we plan to focus on the critical issues for global tiger conservation as identified by this international group This topic will discuss these issues and highlight how they have been addressed in diverse tiger landscapes including both successes and failures Our goal is to provide a foundation and structure for site based tiger conservation actions within and beyond the next 12 year lunar cycle This Research Topic was conceptualized and launched by Dale Miquelle Thomas Gray Luke Hunter Abishek Harihar John Goodrich and Matthew Linkie in collaboration with Frontiers to focus on The

Convergence of Site based tiger conservation strategies Opportunities for restoration of tigers across their historical range Recovery of tigers in Thailand s tiger conservation landscapes what works An integrated law enforcement approach for protecting tigers and their prey in Sumatra Cost of ranger protection for tiger protected area Evaluating a site based enforcement strategy Malaysia Beyond density better indicators for tiger monitoring Prey Recovery is the foundation of tiger restoration Resolving human tiger conflicts Community based tiger conservation Can it work Ensuring connectivity of tiger conservation landscapes Emerging infectious disease threats Tiger conservation and global regional initiatives

Science and Art Antonio Sgamellotti, Brunetto Giovanni Brunetti, Costanza Miliani, 2015-11-09 Science and art are increasingly interconnected in the activities of the study and conservation of works of art Science plays a key role in cultural heritage from developing new analytical techniques for studying the art to investigating new ways of preserving the materials for the future For example high resolution multispectral examination of paintings allows art historians to view underdrawings barely visible before while the use of non invasive and micro sampling analytical techniques allow scientists to identify pigments and binders that help art conservators in their work It also allows curators to understand more about how the artwork was originally painted Through a series of case studies written by scientists together with art historians archaeologists and conservators Science and Art The Painted Surface demonstrates how the cooperation between science and humanities can lead to an increased understanding of the history of art and to better techniques in conservation The examples used in the book cover paintings from ancient history Renaissance modern and contemporary art belonging to the artistic expressions of world regions from the Far East to America and Europe Topics covered include the study of polychrome surfaces from pre Columbian and medieval manuscripts the revelation of hidden images below the surface of Van Gogh paintings and conservation of acrylic paints in contemporary art Presented in an easily readable form for a large audience the book guides readers into new areas uncovered by the link between science and art The book features contributions from leading institutions across the globe including the Metropolitan Museum of Art New York Art Institute of Chicago Getty Conservation Institute Opificio delle Pietre Dure Firenze National Gallery of London Tate Britain Warsaw Academy of Fine Art and the National Gallery of Denmark as well as a chapter covering the Thangka paintings by Nobel Prize winner Richard Ernst
