**Understanding Cities** Alexander R. Cuthbert, 2011 *Understanding Cities* is richly textured complex and challenging. It creates the vital link between urban design theory and praxis and opens the required methodological gateway to a new and unified field of urban design. Using spatial political economy as his most important reference point, Alexander Cuthbert both interrogates and challenges mainstream urban design and provides an alternative and viable comprehensive framework for a new synthesis. He rejects the idea of yet another theory in urban design and chooses instead to construct the necessary intellectual and conceptual scaffolding for what he terms *The New Urban Design Building*, both on Michel de Certeau's concept of heterology (thinking about thinking) and on the framework of his previous books *Designing Cities* and *The Form of Cities*. Cuthbert uses his prior adopted framework (history, philosophy, politics, culture, gender, environment, aesthetics, typologies, and pragmatics) to create three integrated texts. Overall, the trilogy allows a new field of urban design to emerge. Pre-existing and new knowledge are integrated across all three volumes of which *Understanding Cities* is the culminating text.

**Eco-Towers** K. Al-Kodmany, 2015-05-05 *Eco Towers* introduces readers to groundbreaking designs, most progressive projects, and innovative ways of thinking about a new generation of green skyscrapers that could provide solutions to crises the world faces today, including climate change, depleting resources, deteriorating ecology, population increase, decreasing food supply, urban heat island effect, pollution, deforestation, and more. The book suggests that the eco tower culminates the cultural and technological evolutions of the 21st century by building and improving on the experiences of earlier designs of skyscrapers and philosophies, particularly green, sustainable, and ecological. It argues that the true green skyscraper is the one that engages successfully with its larger urban context by establishing symbiotic relationships with the social, economic, and environmental aspects. Since tall buildings are becoming larger and taller, serving greater numbers of people and exerting higher demand on the environment and existing infrastructure, any improvements in their design and construction will significantly enhance urban conditions. The book elucidates how green skyscrapers better serve tenants, mitigate environmental impacts, and improve integration with the city infrastructure. It explains how skyscrapers' long life cycle offers the greatest justifications for recycling precious resources and makes it worthwhile to employ green features in constructing new skyscrapers and retrofitting existing ones. Subsequently, the book explores new designs that are employing cutting-edge green technologies at a grand scale, including water-saving technologies, solar panels, helical wind turbines, sunlight sensing LED lights, rainwater catchment systems, graywater and blackwater recycling systems, seawater-powered air conditioning, and the like. In the future, new building materials and smart technologies will continue to offer innovative design approaches to sustainable tall buildings with new aesthetics, referred to as eco-iconic skyscrapers.

**Modern Thai House** Robert Powell, 2012-10-10 With rich photography and insightful commentary, this Thai architecture and interior design book showcases some of the finest modern masterpieces in

Southeast Asia A tremendous body of sophisticated and sensitively designed architectural work has been produced in Thailand in the first decade of the 21st century The 25 houses in The Modern Thai House illustrate the radical new ideas coming from a dynamic younger generation of architects who are producing work comparable with and sometimes even surpassing the very best architecture in the world Most of these architects were trained in the U S or U K and reflect not only American and European sensibilities but also affinities with their contemporaries in Asia including Japan China Singapore and Bali all hotbeds for innovation in modern design The houses in this book are readily accessible from Bangkok Phuket and Chiangmai They reflect a wide variety of concerns and solutions such as sustainability responses to climate strategies for cooling with minimal electricity openness versus security in a large metropolis such as Bangkok cultural sensitivity and responsiveness as evidenced in a three generation house built for a society in which the extended family is still prevalent and cultural memory as in the use of elements such as pilings verandahs and steeply pitched roofs with large overhangs that echo traditional Thai designs Nurtured by an increasingly knowledgeable and wealthy clientele modern architecture in Thailand is emerging with a variety of innovative architectural expressions **Future of Cities** Ashok Kumar,D.S. Meshram,2022-06-23

**Precedented Environmental Futures** Colin Porteous,2019-04-17 This book addresses the built environment through the lens of environmental architecture and in a holistic manner It moves gradually from psychophysiology and thinking doing feeling modalities

through environmental criteria to environmental modulation concluding with a debate around mitigation and adaptation. Much use is made of re interpreting past quotations seen as relevant for environmental architecture. No definitive conclusions are reached but rather broad discursive messages are offered. The text will have lasting luminance for new generations involved with the built environment. Ecopolis Paul F. Downton, 2008-11-19. From 2008 for the first time in human history half of the world's population now live in cities. Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable. Paul Downton's Ecopolis takes a major step along this path. It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines. Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development. SHED. Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences. **Architecture**, 1999.
