The Reticuloendothelial System : a Comprehensive Treatise: Physiology ,1980 *The Reticuloendothelial System*
Sherwood M. Reichard,James P. Filkins,1985 *The Reticuloendothelial System* Herman Friedman,M.R. Escobar,Sherwood
M. Reichard,1980 This comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual
members of the Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate
system of cells and molecular moieties derived from those cells which constitute the RES It may now be more fashionable in
some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular sys
tem Nevertheless because of historical developments and current interest in the subject by investigators from many diverse
areas it seems advantageous to present in one comprehensive treatise current information and knowledge con cerning basic
aspects of the RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as
clinical areas including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by
presenting information concerning these apparently het erogeneous topics under the unifying umbrella of the RES attention
will be focused on the similarities as well as interactions among the cell types constitut ing the RES from the viewpoint of
various disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual vol and

Physiology ,1980 Phagocytosis—past and future Liana Bolis,2012-12-02 Phagocytosis Past and Future is a collection of contributions by investigators who met in the Province of Messina Sicily in October 1980 to discuss the functions of

phagocytic leukocytes in the host parasite relationship The topics discussed are largely in the areas of cell biology cellular immunology and biochemistry They ranged from aspects of cellular movement and the ingestion process per se to definition of substances that affect the function of phagocytic leukocytes and the nature of cidal mechanisms at the molecular level This volume is organized into six sections encompassing 33 chapters and begins with an overview of Ilya Ilich Metchnikoff's life as well as his scientific contributions particularly in the area of bacteriology and his research on mesodermal amoeboid cells The next chapters focus on the mechanism of phagocytosis with reference to aspects of cell membrane cell movement and ingestion The reader is methodically introduced to the biochemical aspects of phagocytosis from molecular modulations to energetics oxygen radicals and enzymes The discussion then shifts to macrophages their function in antigen recognition receptor mediated endocytosis in macrophage cell hybrids and the role of phagocytosis in macrophage activation The remaining chapters examine the cidal mechanisms of phagocytic leukocytes and aspects of inflammation This book will be of interest to scientists and researchers in fields such as biology biochemistry immunology pathology pharmacology and physiology
