*Retinoids* Heinz Nau, William S. Blaner, 2012-12-06 In the future the decade of the 1990s will likely be viewed as a Golden Age for retinoid research There have been unprecedented research gains in the understanding of retinoid actions and physiology since the retinoid nuclear receptors were first identified and the importance of retinoic acid in developmental processes was first broadly recognized in the late 1980s Between then and now our knowledge of retinoid action has evolved from one of a near complete lack of understanding of how retinoids act within cells to one of sophisticated understanding of the molecular processes through which retinoids modulate transcription In this volume we have tried to provide a comprehensive update of the present understanding of retinoid actions with an emphasis on recent advances The initial chapters of the volume or Section A focus on the physicochemical properties and metabolism of naturally occurring retinoids N OY provides an uncommonly encountered view of retinoid effects from the perspective of the physicochemical properties of retinoids V AKIANI and BUCK lend a perspective on the biological occurrence and actions of retro and anhydro retinoids Section B considers both the retinoid nuclear receptors and their mechanisms of action as well as synthetic retinoids that have been used experimentally to provide mechanistic insights into receptor actions and have potential therapeutic use for treating disease PIEDRAFITA and PFAHL provide a comprehensive review of retinoid nuclear receptor biochemistry and molecular biology Retinoids and Carotenoids in Dermatology Anders Vahlquist, Madeleine Duvic, 2007-06-20 This up to date reference describes how retinoids and carotenoids function in the skin and how they can be utilized to prevent and treat a wide variety of skin diseases as well as advance biomedical research in relation to cancer treatment and immunology Providing an in depth update on the pharmacology pharmacodynamics and new applications of **Vitamin A**, 2011-09-21 First published in 1943 *Vitamins and Hormones* is the longest running serial published by Academic Press In the early days of the serial the subjects of vitamins and hormones were quite distinct The Editorial Board now reflects expertise in the field of hormone action vitamin action X ray crystal structure physiology and enzyme mechanisms Under the capable and qualified editorial leadership of Dr Gerald Litwack *Vitamins and Hormones* continues to publish cutting edge reviews of interest to endocrinologists biochemists nutritionists pharmacologists cell biologists and molecular biologists Others interested in the structure and function of biologically active molecules like hormones and vitamins will as always turn to this series for comprehensive reviews by leading contributors to this and related disciplines Enzymology and Molecular Biology of Carbonyl Metabolism 13 Henry Weiner, Edmund Maser, Ronald Lindahl, 2007 The continuation of an annual series *Enzymology and Molecular Biology of Carbonyl Metabolism* is the largest collection of articles on the three major gene families The scope of the chapters contributed by leading international scientists is wide and covers gene regulation to enzyme mechanisms and protein structure This is the only publication dealing in such depth with just three gene families It is an important reference for researchers in toxicology and molecular biology *Clinical Studies in Medical Biochemistry*

**Glioblastoma:** Swapan K. Ray, 2009-10-31 Glioblastoma is the most malignant brain tumor that still remains incurable It is such a deadly disease that patients do not survive more than a few months after diagnosis Our understanding of the histopathology and molecular mechanisms of formation of glioblastoma is rapidly advancing so as to provide us clues for devising rational therapeutic strategies for treatment of this malignancy It is important that we continue to improve our knowledge about the pathogenesis of this devastating disease and explore new areas to find successful therapeutic strategies Various approaches such as sophisticated imaging techniques improved surgical procedures ground breaking strategies for radiotherapy chemotherapy immunotherapy chemoimmunotherapy and photodynamic therapy are being used for eradicating glioblastoma Hopefully this book will be an important source of information on glioblastoma and therefore be highly useful to the students postdoctoral fellows principal investigators and clinicians involved in this field

Death Receptors in Cancer Therapy Wafik S. El-Deiry, 2007-11-15 An in depth review of our latest understanding of the molecular events that regulate cell death and those molecules that provide targets for developing agonists or antagonists to modulate death signaling for therapeutic purposes The authors focus on the extrinsic system of death receptors their regulation and function and their abnormalities in cancer Topics of particular interest include resistance to apoptosis TRAIL signaling death receptors in embryonic development mechanisms of caspase activation and death receptor mutations in cancer Additional chapters address death signaling in melanoma synthetic retinoids and death receptors the role of p53 in death receptor regulation immune suppression of cancer and combination therapy with death ligands

**Photoaging** Darrell S. Rigel, Robert A. Weiss, Henry W. Lim, Jeffrey S. Dover, 2004-01-30 The effects of UV exposure and aging are becoming an increasingly critical issue in clinical practice Sun
