Magnetogasdynamics And Plasma Dynamics:

Magnetogasdynamics and Plasma Dynamics Shih-I. Pai, 2012-12-06 This book is based on the lecture notes which the author gave in a seminar of the same title in the Institut für theoretische Gasdynamik D V L e V Aachen Germany during the academic year of 1957-1958. The subject matter has been rewritten and expanded after the author's return to the University of Maryland. The purpose of this book is to give a theoretical introduction to plasma dynamics and magnetogasdynamics from the gasdynamic point of view. Attention is given to the basic assumptions and the formulation of the theory of the flow problems of a plasma, an ionized gas, as well as to the various methods of solving these problems. Since plasma dynamics is still in a developing stage, the author hopes that this book may furnish the readers some basic elements in the theory of plasma dynamics so that they may find it useful for further study and research in this new field. After the introduction in which the scope of plasma dynamics is briefly discussed, the fundamental equations of plasma dynamics from the macroscopic point of view, i.e., the theory of continuum, has been analyzed in detail in chapters I to IV, including many simplified cases such as magnetogasdynamics, magnetohydrodynamics, electromagnetodynamics, radiation magnetogasdynamics, etc. In chapter V, the important parameters and their range of applications have been treated. The parameters are useful in the correlation of experimental results.

High Temperature Gas Dynamics Tarit K. Bose,2013-03-09 High Temperature Gas Dynamics is a class tested primer for students scientists and engineers who would like to have a basic understanding of the physics and the behaviour of high temperature gases It is a valuable tool for astrophysicists as well The first chapters treat the basic principles of quantum and statistical mechanics and how to derive thermophysical properties from them Special topics are included that are rarely found in other textbooks such as the thermophysical and transport properties of multi temperature gases and a novel method to compute radiative transfer Furthermore collision processes between different particles are discussed Separate chapters deal with the production of high temperature gases and with electrical emission in plasmas as well as related diagnostic techniques
