*Cell Death in Reproductive Physiology* Jonathan L. Tilly, Jerome F. Strauss, Martin Tenniswood, 2012-12-06 The regulation of cell death in various reproductive tissues as in other major organ systems of the body has become a focal point of research activity in many laboratories over the past few years As such the need for a formal meeting to highlight recent work in this field as well as to integrate knowledge from other sources such as investigators working on cell death in cancer and immune function in the broad context of identifying conserved pathways that coordinate life and death decisions in diverse cell types became apparent Therefore the goals of the Scientific

Committee of the International Symposium on Cell Death in Reproductive Physiology sponsored by Sero Symposia USA were already predetermined by this need Simply stated we sought to bring together for the first time a select cohort of reproductive biologists and cell death researchers many but not all chosen based on their pioneering efforts in elucidating the fundamental aspects of apoptosis in reproductive and nonreproductive tissues as a means to review the current status of the field foster new ideas and promote scientific collaborations In the ensuing chapters of this book summaries of work discussed at the meeting are presented to emphasize both the diversity and the similarities in the occurrence and regulation of apoptosis in tissues of the male and female reproductive systems

### **Computer Vision for Microscopy Image Analysis**

Mei Chen, 2020-12-01 Are you a computer scientist working on image analysis Are you a biologist seeking tools to process the microscopy data from image based experiments Computer Vision for Microscopy Image Analysis provides a comprehensive and in depth discussion of modern computer vision techniques in particular deep learning for microscopy image analysis that will advance your efforts Progress in imaging techniques has enabled the acquisition of large volumes of microscopy data and made it possible to conduct large scale image based experiments for biomedical discovery The main challenge and bottleneck in such experiments is the conversion of big visual data into interpretable information Visual analysis of large scale microscopy data is a daunting task Computer vision has the potential to automate this task One key advantage is that computers perform analysis more reproducibly and less subjectively than human annotators Moreover high throughput microscopy calls for effective and efficient techniques as there are not enough human resources to advance science by manual annotation This book articulates the strong need for biologists and computer vision experts to collaborate to overcome the limits of human visual perception and devotes a chapter each to the major steps in analyzing microscopy images such as detection and segmentation classification tracking and event detection Discover how computer vision can automate and enhance the human assessment of microscopy images for discovery Grasp the state of the art approaches especially deep neural networks Learn where to obtain open source datasets and software to jumpstart his or her own investigation
