[The Victorian Palace of Science](#) Edward J. Gillin, 2017-11-09 The Palace of Westminster, home to Britain's Houses of Parliament, is one of the most studied buildings in the world. What is less well known is that while Parliament was primarily a political building when built between 1834 and 1860, it was also a place of scientific activity. The construction of Britain's legislature presents an extraordinary story in which politicians and officials laboured to make their new Parliament the most radical modern building of its time by using the very latest scientific knowledge. Experimentalists employed the House of Commons as a chemistry laboratory; geologists argued over the Palace's stone; natural philosophers hung meat around the building to measure air purity; and mathematicians schemed to make Parliament the first public space where every room would have electrically controlled time. Through such dramatic projects, Edward J. Gillin redefines our understanding of the Palace of Westminster and explores the politically troublesome character of Victorian science.

The Science of Religion: A Defence Donald Wiebe, 2018-10-16 Donald Wiebe, Professor of Philosophy of Religion at Trinity College University of Toronto, has spent much of his academic career arguing for a clear demarcation between Theology and Religious Studies. *The Science of Religion: A Defence* offers a brilliant overview of Professor Wiebe's contributions on methodology in the academic study of religion, the development of his thinking over time, and of his intellectual commitment to a science of religion. The work is divided into three parts. The first part identifies pertinent connections between religion, religious studies, and science, and why reductionism in the academic study of religion, when properly applied, can bridge the explanatory gap between the sceptic and the devotee. The second part treats conceptual debates in the academic study of religion with particular reference to the place of belief, understanding, and meaning in the modern study of religion. The third part addresses the theological resistance to the scientific study of religion and how that resistance can be overcome. Finally, two new essays are included: a critique on *The Preconceptions of a Science of Religion* by Anthony J. Palma and an accompanying reply by Donald Wiebe. *The Science of Religion: A Defence* is an essential resource for both scholarly and non-scholarly audiences alike and will be of particular interest to both defenders and critics of a scientific study of religion.

[Sociology at the London School of Economics and Political Science, 1904-2015](#) Christopher T. Husbans, 2019-03-14 This book provides an original overall account of the history of sociology at the London School of Economics and Political Science, where the first sociology course as part of a conventional university degree programme in the UK was taught. Thus, the book is unique in its contribution to an important part of the history and development of sociology in the UK. The chapters discuss the names that, at least until the post-war period, are identified as central to the early phase of British sociology. Husbans documents the impact and influence of these leading figures through material in numerous previously little-used archives. Also explored are the culture of LSE Sociology students, their attitudes,

political orientations and academic attainments The reputation and influence of LSE Sociology on the general development of the subject in the UK are also assessed The book will be of interest to sociology students and scholars wanting to know about the discipline s history as well as to those with a broader interest in higher education policy *Current Catalog National Library of Medicine (U.S.)*,1985 First multi year cumulation covers six years 1965 70 **Reinventing the Social Scientist and Humanist in the Era of Big Data: A Perspective from South African Scholars** Susan Brokensha,Burgert A. public policy This book charts the development of the academic field of Regional Studies and the application of its concepts in public policy through its learned society the Regional Studies Association In their modern form learned societies often play a complementary role to universities offering networks that operate in the spaces between and beyond universities connecting specialised academics and knowledge and making it possible for them to have impact outside the academy In contrast to the geographically tangible and popularly understood role of the university contemporary learned societies are nebulous networks that transcend barriers and whose contribution is difficult to discern However the production and dissemination of knowledge would be stunted were it not for the learned society connecting scholars through a network of publications and events This book traces the intellectual history of regional studies and regional science from the 1960s into the 2000s and the impact of the regional concept in public policy through the changing priorities of government in the UK and Europe By approaching the history through the Regional Studies Association it interrogates the role and function of the learned society model of organisation in contemporary academia and importance as a knowledge exchange vehicle for public policy influence
