**Black Health** Keisha Ray, 2023 Why do American Black people generally have worse health than American White people To answer this question Black Health dispels any notion that Black people have inferior bodies that are inherently susceptible to disease

This is simply false racial science used to justify White supremacy and Black inferiority. A genuine investigation into the status of Black people's health requires us to acknowledge that race has always been a powerful social category that gives access to the resources we need for health and wellbeing to some people while withholding them from other people. Systemic racism, oppression, and White supremacy in American institutions have largely been the perpetrators of differing social power and access to resources for Black people. It is these systemic inequities that create the social conditions needed for poor health outcomes for Black people to persist. An examination of social inequities reveals that it is no accident that Black people have poorer health than White people. Black Health provides a succinct discussion of Black people's health including the social, political, and at times cultural determinants of their health. Using real stories from Black people, Ray examines the ways in which Black people's multiple identities, social, cultural, and political, intersect with American institutions such as housing, education, environmentalism, and health care to facilitate their poor outcomes in pregnancy and birth, pain management, sleep, and cardiovascular disease.
