relate to the world around us They need to be developed in a manner that both extends human capabilities while ensuring an appropriate cognitive t between organism and instrument The principal theme of the CT 2001 conference and volume is declared in its title Instruments of Mind Cognitive Technology is concerned with the interaction between two worlds that of the mind and that of the machine In science and engineering this teraction is often explored by posing the question how can technology be best tailored to human cognition But as the history of technological developments has consistently shown cognition is also fashioned by technology Technologies as diverse as writing electricity generation and the silicon chip all illustrate the profound and dynamic impact of technology upon ourselves and our conceptions of the world **People's**
