People and Computers XIV — Usability or Else! Sharon McDonald, Yvonne Waern, Gilbert Cockton, 2012-12-06

Currently we are at the beginnings of widespread wireless connectivity and ubiquitous computing The Web is merging with a variety of technologies cell phones laptop computers hand held organisers information appliances and GPS and other sensors The capability for access anytime and anywhere is here The increasing frequency of cell phone calls at inappropriate times testifies that people no longer can easily control access Devices can determine where they are located and can make a range of information available to users as well as make users available to others or their devices We have proposed a general technique that promises to assist in mediating access It capitalises on advantages afforded by computation Hollan Stometta 1992 We first described the negotiation technique in the context of problems involved in scheduling meetings and then showed that similar issues which at first may seem unrelated but in fact have much in common arise in other contexts One such activity gaining immediate access is currently of growing importance because of expanding connectivity via wireless technology Cell phones and related technologies make it possible to be constantly available for synchronous interaction At times this can be advantageous but the associated costs and benefits result in a complex tradeoff space for designers as well as users Proceedings of the 14th Indian Conference on Human-Computer Interaction Anirudha Joshi, Gavin R.

results from academia Security and Usability Lorrie Faith Cranor, 2005-08-25 Human factors and usability issues have traditionally played a limited role in security research and secure systems development Security experts have largely ignored usability issues both because they often failed to recognize the importance of human factors and because they lacked the expertise to address them But there is a growing recognition that today's security problems can be solved only by addressing issues of usability and human factors Increasingly well publicized security breaches are attributed to human errors that might have been prevented through more usable software Indeed the world's future cyber security depends upon the deployment of security technology that can be broadly used by untrained computer users Still many people believe there is an inherent tradeoff between computer security and usability It's true that a computer without passwords is usable but not very secure A computer that makes you authenticate every five minutes with a password and a fresh drop of blood might be very secure but nobody would use it Clearly people need computers and if they can't use one that's secure they'll use one that isn't Unfortunately unsecured systems aren't usable for long either They get hacked compromised and otherwise rendered useless There is increasing agreement that we need to design secure systems that people can actually use but less agreement about how to reach this goal *Security Usability* is the first book length work describing the current state of the art in this emerging field Edited by security experts Dr Lorrie Faith Cranor and Dr Simson Garfinkel and authored by cutting edge security and human computer interaction HCI researchers world wide this volume is expected to become both a classic reference and an inspiration for future research *Security Usability* groups 34 essays into six parts Realigning Usability and Security with careful attention to user centered design principles security and usability can be synergistic Authentication Mechanisms techniques for identifying and authenticating computer users Secure Systems how system software can deliver or destroy a secure user experience Privacy and Anonymity Systems methods for allowing people to control the release of personal information Commercializing Usability The Vendor Perspective specific experiences of security and software vendors e.g. IBM Microsoft Lotus Firefox and Zone Labs in addressing usability The Classics groundbreaking papers that sparked the field of security and usability This book is expected to start an avalanche of discussion new ideas and further advances in this important field *Enterprise Information Systems VI* Isabel Seruca, José Cordeiro, Slimane Hammoudi, Joaquim Filipe, 2006-07-08 This book contains the best papers of the Sixth International Conference on Enterprise Information Systems ICEIS 2004 held in Porto Portugal and organized by INSTICC Institute for Systems and Technologies of Information Communication and Control in collaboration with PORTUCALENSE UNIVERSITY who hosted the event

Ivory,2013-06-29 Among all information systems that are nowadays available

web sites are definitely the ones having the widest potential audience and the most significant impact on the everyday life of

people Web sites contribute largely to the information society they provide visitors with a large array of services and information and allow them to perform various tasks without prior assumptions about their computer literacy Web sites are assumed to be accessible and usable to the widest possible audience Consequently usability has been recognized as a critical success factor for web sites of every kind Beyond this universal recognition usability still remains a notion that is hard to grasp Summative evaluation methods have been introduced to identify potential usability problems to assess the quality of web sites However summative evaluation remains limited in impact as it does not necessarily deliver constructive comments to web site designers and developers on how to solve the usability problems Formative evaluation methods have been introduced to address this issue Evaluation remains a process that is hard to drive and perform while its potential impact is probably maximal for the benefit of the final user This complexity is exacerbated when web sites are very large potentially up to several hundreds of thousands of pages thus leading to a situation where evaluating the web site is almost impossible to conduct manually Therefore many attempts have been made to support evaluation with Models that capture some characteristics of the web site of interest *Information Retrieval in Digital Environments* Jerome Dinet, 2014-08-08

Information retrieval is a central and essential activity It is indeed difficult to find a human activity that does not need to retrieve information in an environment which is often increasingly digital moving and navigating learning having fun communicating informing making a decision etc Most human activities are intimately linked to our ability to search quickly and effectively for relevant information the stakes are sometimes extremely important passing an exam voting finding a job remaining autonomous being socially connected developing a critical spirit or simply surviving The author of this book presents a summary of work undertaken over several years relative to the behaviors and cognitive processes involved in information retrieval in digital environments He presents several examples of theoretical models and studies to better understand the difficulties behaviors and strategies of individuals searching for information in digital environments

Leu, 2014-04-04 Situated at the intersection of two of the most important areas in educational research today literacy and technology this handbook draws on the potential of each while carving out important new territory It

provides leadership for this newly emerging field directing scholars to the major issues theoretical perspectives and interdisciplinary research pertaining to new literacies Reviews of research are organized into six sections Methodologies Knowledge and Inquiry Communication Popular Culture Community and Citizenship Everyday Literacies Instructional Practices and Assessment Multiple Perspectives on New Literacies Research FEATURES Brings together a diverse international team of editors and chapter authors Provides an extensive collection of research reviews in a critical area of educational research Makes visible the multiple perspectives and theoretical frames that currently drive work in new literacies Establishes important space for the emerging field of new literacies research Includes a unique Commentary section The final section of the Handbook reprints five central research studies Each is reviewed by two prominent researchers from their individual and different theoretical position This provides the field with a sense of how diverse lenses can be brought to bear on research as well as the benefits that accrue from doing so It also provides models of critical review for new scholars and demonstrates how one might bring multiple perspectives to the study of an area as complex as new literacies research The Handbook of Research on New Literacies is intended for the literacy research community broadly conceived including scholars and students from the traditional reading and writing research communities in education and educational psychology as well as those from information science cognitive science psychology sociolinguistics computer mediated communication and other related areas that find literacy to be an important area of investigation
