Amino Acids, Peptides and Proteins J S Davies,2007-10-31 In an ever increasing domain of activity Amino Acids Peptides and Proteins provides an annual compilation of the world s research effort into this important area of biological chemistry Volume 30 provides a review of literature published during 1997 Comprising a comprehensive review of significant developments at this biology chemistry interface each volume opens with an overview of amino acids and their applications Work on peptides is reviewed over several chapters ranging from current trends in their synthesis and conformational and structural analysis to peptidomimetics and the discovery of peptide related molecules in nature The application of advanced techniques in structural elucidation is incorporated into all chapters whilst periodic chapters on metal complexes of amino acids peptides

and beta lactams extend the scope of coverage Efficient searching of specialist topics is facilitated by the sub division of chapters into discrete subject areas allowing annual trends to be monitored All researchers in the pharmaceutical and allied industries and at the biology chemistry interface in academia will find this an indispensable reference source *Carnosine and Oxidative Stress in Cells and Tissues* Alexander A. Boldyrev,2007 The main aim of this new book is to summarise the knowledge on the metabolic transformation of carnosine in excitable tissues of animals and human beings and to analyse the nature of its biological activity At the beginning of monograph the short history of the problem is stated Distribution of carnosine in tissues its appearance in ontogeny of vertebrates and correlation between carnosine content and functional activity of tissues are discussed Chemical properties of carnosine and its natural derivatives and their ability to bind heavy metals and protons in water solution are documented Special attention is paid to free radical quenching ability and to anti glycating action Biological activity of carnosine and carnosine containing compounds was tested using biological models of several levels of complexity starting from individual enzymes and acellular mixtures and finishing to living cells and survival animals Effects of carnosine on the whole animals under ischemic hypoxic and other extreme conditions are described In conclusion the ability of carnosine to protect brain and muscular tissues from oxidative injury during exhausting exercise extreme loading or neurodegenerative diseases is demonstrated Based on these properties carnosine is postulated to be a potent protector of human beings from oxidative stress
