Educational Innovation in Economics and Business VI Tor A. Johannessen, Ansgar Pedersen, Kurt Petersen, 2013-04-17

Business education and business research has often been criticized by the business community which claims that much of it is mainly directed at the establishment of teachers and researchers themselves instead of distributing their knowledge to the business community. It may seem that many universities and other research institutions have turned into mere knowledge manufacturers where the emphasis is more on the output volume than on quality of relevance with little or no consideration for the end users. As universities and corporations attempt to prepare management to be alert to future changes, improved and even brand new teaching methodologies are required. The main focus of the present volume is on the distribution and selection of new knowledge. How can business educators deliver new knowledge to students and the business community more rapidly than before? How should we define the core business curriculum when new knowledge becomes old knowledge?

**ANCOC Common Core**, 1985      **Structural Self-Organization in Multi-Agents and Multi-Robotic Systems** Serge

Kernbach, 2008. This work is about creating desired artificial self organization in multi agent and multi robotic systems. It is demonstrated that emergent phenomena can artificially be designed when to treat collective systems on a new structural level. Examples of desired self organization implemented in manufacturing environment and in a large scale swarm of micro robots allow deeper understanding of collective artificial intelligence. The work wins the infos faculty award as the best dissertation of 2008.      *Attention in Vision* A.H.C. van der Heijden, 2004-03-01. Attention in Vision is an important work which aims to identify, address and solve some major problems and issues in the psychology of visual perception, attention and intentional control. The central aim is to investigate how people use their visual perception in the performance of tasks and to explore how the intentional control of action is achieved. Through an extensive review of the philosophy of psychology, the history of ideas and theories of intentional control and an analysis of various tasks, a new theory is developed which argues that there is an important difference between report tasks and act tasks. The first section of the book introduces the issues of visual perception in a historical context and outlines van der Heijden's theory. The theory is developed in the second and third sections by analysing the findings from some of the main experimental paradigms of cognitive psychology and applying the theory to act tasks. Finally, the epilogue skilfully draws together the theory into an explanation of different historical and theoretical perspectives in psychology. This book will be invaluable to researchers and high level undergraduates in the field of visual perception and attention.

**An Ecological and Societal Approach to Biological Control** J. Eilenberg, Heikki M. T. Hokkanen, 2007-01-29. Biological control is among the most promising methods for control of pests, diseases and weeds and this book treats ecological and societal aspects together for the first time. The aim is to evaluate the significance of certain biological properties like biodiversity and natural habitats. In a societal approach, terms like consumer's attitude, risk perception, learning and education and value triangle are recognized as significant for biological production and human welfare.      *Science, Order and Creativity second edition* David Bohm, F.
