Perception And Experience:

Perception and Experience H. Pick, 2013-11-11 In recent years significant indeed dramatic advances have occurred in the study of perception These have been made possible by and in fact include methodological advances such as the development of signal detection theory and the application of linear systems analysis to auditory and visual perception They are reflected in an interest in the study of ecologically valid perceptual problems e.g. control of locomotion speech perception reading perceptual motor coordination and perception of events At the same time exciting new insights have been gained to some of the classical problems of perception stereoscopic vision color vision attention position constancy to mention a few A broad comparative approach to perception has also been taken This approach which includes the detailed study of human infant perception as well as cross cultural and cross species investigations has given us a very broad perspective of the perceptual process In this context the present volume inaugurates a new series entitled Perception and Perceptual Development A Critical Review Series The editors are particularly gratified by the enthusiastic support for their ideas by Seymour Weingarten of Plenum Press He and the editorial staff of Plenum Press have been of immense help in initiating the series as well as helping with the details of this first volume

Perception and Its Modalities Dustin Stokes, Mohan Matthen, Stephen Biggs, 2014-08-28 This volume is about the many ways we perceive Contributors explore the nature of the individual senses how and what they tell us about the world and how they interrelate The volume begins to develop better paradigms for understanding the senses and perception

What is the Relationship Between Awareness, Perception & Experience? John King, 2011-03 There are a very diverse range of views concerning the nature of awareness perception and experience In this book John King considers both the nature of the three individual phenomena and the various possible links which could exist between the three phenomena Some of the main themes covered are the idea that awareness and experience are equivalent experience without awareness perception without awareness sleep and dreaming

The Structure of Perceptual Experience James Stazicker, 2015-06-02 This innovative new collection features six original essays exploring the spatial temporal and other structures that shape conscious perception Includes cutting edge research on an increasingly influential topic in the philosophy of the mind Explores structural differences between the senses and between different theories of perceptual experience Offers innovative new arguments on the philosophy of perception written by leading scholars in the field

Towards a Theory of Epistemically Significant Perception Nadja El Kassab, 2015-09-25 How does perceptual experience make us knowledgeable about the world In this book Nadja El Kassab argues that an informed answer requires a novel theory of perception perceptual experience involves conceptual capacities and consists in a relation between a perceiver and the world Contemporary theories of perception disagree about the role of content and conceptual capacities in perceptual experience In her analysis El Kassab scrutinizes the arguments of conceptualist and relationist theories thereby exposing their limitations for explaining the

epistemic role of perceptual experience Against this background she develops her novel theory of epistemically significant perception Her theory improves on current accounts by encompassing both the epistemic role of perceptual experiences and its perceptual character Central claims of her theory receive additional support from work in vision science making this book an original contribution to the philosophy of perception

Perception and its Objects Bill Brewer,2013-03-07 Bill Brewer presents motivates and defends a bold new solution to a fundamental problem in the philosophy of perception What is the correct theoretical conception of perceptual experience and how should we best understand the most fundamental nature of our perceptual relation with the physical objects in the world around us Most theorists today analyse perception in terms of its representational content in large part in order to avoid fatal problems attending the early modern conception of perception as a relation with particular mind dependent objects of experience Having set up the underlying problem and explored the lessons to be learnt from the various difficulties faced by opposing early modern responses to it Bill Brewer argues that this contemporary approach has serious problems of its own Furthermore the early modern insight that perception is most fundamentally to be construed as a relation of conscious acquaintance with certain direct objects of experience is he claims perfectly consistent with the commonsense identification of such direct objects with persisting mind independent physical objects themselves Brewer here provides a critical historical account of the philosophy of perception in order to present a defensible vindication of empirical realism

The Ontology of Perceptual Experience Sebastián Sanhueza Rodríguez,2022-08-23 Contemporary philosophy of perception typically focuses on discussions concerning the content and the phenomenology of perceptual experience In a significant departure from this tradition *The Ontology of Perceptual Experience* explores the very conscious phenomena to which intentional or phenomenal features are thus ascribed Drawing on a new wave of research including the work of maverick philosophers like Helen Steward Brian O Shaughnessy and Matthew Soteriou this book examines two ways of categorizing perceptual experiences in accordance to their dynamic structure on the one hand Experiential Heracliteanism an approach striving to describe perceptual experiences in terms of irreducibly dynamic components and on the other Experiential Non Heracliteanism which conceives perceptual experiences as dynamic phenomena that may nevertheless be described in terms of non dynamic elements Sebastián Sanhueza Rodríguez describes both proposals and makes a modest case on behalf of the Non Heraclitean approach against its increasingly popular Heraclitean counterpart This case crucially turns on the fact that the Heracliteanist engages in a controversial and perhaps unnecessary commitment to irreducibly dynamic processes The ontological framework this book unpacks offers a platform from which traditional issues in the philosophies of mind and perception may be revisited in refreshing and potentially fruitful ways

The Structure of Perceptual Experience James Stazicker,2015-03-19 This innovative new collection features six original essays exploring the spatial temporal and other structures that shape conscious perception Includes cutting edge research on an increasingly influential topic in the philosophy of the mind Explores structural

differences between the senses and between different theories of perceptual experience Offers innovative new arguments on the philosophy of perception written by leading scholars in the field **Perception, Causation, and Objectivity** Johannes Roessler,Hemdat Lerman,Naomi Eilan,2011-07-14 Leading philosophers and psychologists offer a rigorous assessment of the commonsense view that perceptual experience is an immediate awareness of mind independent objects They examine the nature of perception its role in the acquisition of knowledge the role of causation in perception and how perceptual understanding develops in humans **Evaluative Perception** Anna Bergqvist,Robert Cowan,2018 Evaluation is ubiquitous This volume brings together philosophers to investigate whether there is a distinctive kind of perception that is evaluative If so what role does it play in evaluative knowledge and what does its existence tell us about the nature of value Does Perception Have Content? Berit Brogaard,2014-09-05 Within the contemporary philosophical debates over the nature of perception the question of whether perception has content in the first place recently has become a focus of discussion The most common view is that it does but a number of philosophers have questioned this claim The issue immediately raises a number of related questions What does it mean to say that perception has content Does perception have more than one kind of content Does perceptual content derive from the content of beliefs or judgments Should perceptual content be understood in terms of accuracy conditions Is naive realism compatible with holding that perception has content This volume brings together philosophers representing many different perspectives to address these and other central questions in the philosophy of perception **Subjective Experience** Morris N. Eagle,2024-03-07 Morris N Eagle explores the understanding and role of subjective experience in the disciplines of psychology psychoanalysis and philosophy of mind Elaborating how different understandings of subjective experience give rise to very different theories of the nature of the mind Eagle then explains how these shape clinical practices In particular Eagle addresses the strong tendency in the disciplines concerned with the nature of the mind to overlook the centrality of subjective experience in one s life to view it with suspicion and to reduce it to neural processes Describing examples of research in which subjective experience is a central variable Eagle provides an outline of a model in which the dichotomy of conscious and unconscious is supplemented by subjective experience as a continuum This book is essential reading for psychoanalysts psychoanalytic psychotherapists psychologists and anyone wishing to gain a deeper understanding of the importance of theories of the mind to therapeutic practice *The Attentional Shaping of Perceptual Experience* Francesco Marchi,2020-01-23 This monograph presents a clear account of when and how attentional processes can shape perceptual experience This argument is based on the prediction error minimization model of the mind The author believes that the topic of attention should take a more central role in the debate about the influence of cognition on perception Inside he shows how this can be possible The hypothesis that cognition may shape perceptual experience has been traditionally labeled as the cognitive penetrability of perceptual experience Cognitive penetrability is relevant for several debates in philosophy and cognitive science It tackles the possibility

of gathering genuine knowledge on the basis of perceptual information about the world delivered by sensory channels The problem the author notes is that if our previously acquired belief can shape current perceptual experiences such experiences cannot serve as an adequate source of justification in retaining those beliefs or even forming new ones He argues that cognitive penetration may sometimes happen through attentional processes but that its occurrence need not undermine perceptual justification The book provides an overview of the cognitive penetrability debate The author discusses evidence that supports the occurrence of this phenomenon Overall this investigation offers readers a philosophical discussion of attention based on the biased competition theory It argues that attention is a property of mental representations that emerges from a metacognitive competition process

Purpose and Procedure in Philosophy of Perception Heather Logue, Louise Richardson, 2021 This volume presents a collection of chapters examining fundamental assumptions of contemporary debates in the philosophy of perception The chapters cover a wide range of topics from the relation between scientific and philosophical theorizing about perception to lessons we can learn from the history of philosophy of perception

Intuition as Conscious Experience Ole Koksvik, 2020-11-29 Is torturing the innocent OK Just now something happened it seemed to you that torturing the innocent is wrong What kind of mental state were you in What is its nature Perhaps you now believe that torturing the innocent is wrong because it just seemed to you that it is If so that seems appropriate But is it really and if so what could explain this In this book Koksvik argues these mental states form a psychological kind called intuition and that having an intuition indeed justifies you in believing what it says What explains this he argues is how similar intuition is to perception Through a detailed examination he shows that intuition just like perception is a conscious experience and that the two experience types have important properties in common in virtue of which they can both justify belief In sharp contrast to traditional thought Koksvik argues that intuition is completely unrestricted in content we have intuitions about morality and metaphysics but also about all sorts of everyday things like danger or trustworthiness and in all cases they can justify The use of intuition is thus not only a legitimate part of philosophical and scientific practice it also plays a pervasive important and legitimate role in all of our everyday rational lives

Perception, Action, and Consciousness Nivedita Gangopadhyay, Michael Madary, Finn Spicer, 2010-08-19 What is the relationship between perception and action between an organism and its environment in explaining consciousness This book is an interdisciplinary exploration of the relationship between perception and action with a focus on the debate about the dual visual systems hypothesis against action oriented theories of perception

The Nature of Consciousness Ned Block, Owen Flanagan, Guven Guzeldere, 1997-09-10 Intended for anyone attempting to find their way through the large and confusingly interwoven philosophical literature on consciousness this reader brings together most of the principal texts in philosophy and a small set of related key works in neuropsychology on consciousness through 1997 and includes some forthcoming articles Its extensive coverage strikes a balance between seminal works of the past few decades and the leading edge of philosophical research on

consciousness As no other anthology currently does *The Nature of Consciousness* provides a substantial introduction to the field and imposes structure on a vast and complicated literature with sections covering stream of consciousness theoretical issues consciousness and representation the function of consciousness subjectivity and the explanatory gap the knowledge argument qualia and monitoring conceptions of consciousness Of the 49 contributions 18 are either new or have been adapted from a previous publication

Pre-cueing Effects on Perception, Attention, and Cognitive Penetrability Athanassios Raftopoulos, Gary Lupyan, 2018-04-12 Attention has often been likened to spotlights and filters devices that illuminate or screen out some inputs in favor of others This largely passive conception of attention has been gradually replaced by a more dynamic and far reaching process We know that attentional processes augment neural processing at all levels and in some cases augmenting processing within the sense organs themselves For example cueing object features e g instructing a subject to look at a screen for a red object modulates prestimulus activity in the visual cortex Far from being limited to space or basic features such attention cueing can function in surprisingly flexible and complex ways people can be cued to attend to various objects properties and semantic categories and such attention appears to directly involve perceptual mechanisms Studies of spatial attention cues presented before stimulus presentation show early modulation of perceptual processing This phenomenon refers to the enhancement of the baseline activity of neurons at all levels in the visual cortex that are tuned to the cued location which is called attentional modulation of spontaneous activity The spontaneous firing rates of neurons are increased when attention is shifted toward the location of an upcoming stimulus before its presentation Evidence also suggests that through pre cueing of object features feature based attention modulates prestimulus activity in the visual cortex The effects of pre stimulus feature attention act either as a preparatory activity to enhance the stimulus evoked potentials within feature sensitive areas or they act so as to modulate stimulus locked transients Both effects of pre cueing reflect a change in background neural activity They are called anticipatory effects established prior to the presentation of the stimulus Thus they do not modulate processing during stimulus viewing but bias the process before it starts via the increase in the base line firing rates they rig up perceptual processing without affecting it on line Moreover recent work on perceptual processing emphasizes the role of brain as a predictive tool To perceive is to use what you know to explain away the sensory signal across multiple spatial and temporal scales Perception aims to enable perceivers to interact with their environment successfully Success relies on inferring or predicting correctly or nearly so the nature of the source of the incoming signal from the signal itself an inference that may well be Bayesian Current research sheds light on the role of attention in inferring the identities of the distal objects Attention within late vision contributes to testing hypotheses concerning the putative distal causes of the sensory data encoded in the lower neuronal assemblies in the visual processing hierarchy This testing assumes the form of matching predictions made on the basis of an hypothesis about the sensory information that the lower levels should encode assuming that the hypothesis is correct with the current actual sensory information encoded at the lower

levels To this aim attention enhances the activity of neurons in the cortical regions that encode the stimuli that most likely contain information relevant to the testing of the hypothesis In this Research Topic we aim to answer two related questions First what are the differences between this sort of pre cueing effects and top down cognitive influences on perception and in general how do such attentional cuing effects relate to the broader literature on top down influences on perception Second given that attention appears to change perceptual processing and that a form of attention namely cognitively driven or endogenous or sustained attention is a cognitive process does attentional modulation through pre cueing constitute cognitive penetrability of perception Addressing these two questions will shed light on the theoretical underpinnings of cognitive penetrability and the nature of perceptual processing Perceptual Experience Tamar Szabo Gendler, John

Hawthorne, 2006-01-19 In the last few years there has been an explosion of philosophical interest in perception after decades of neglect it is now one of the most fertile areas for new work Perceptual Experience presents new work by fifteen of the world's leading philosophers All papers are written specially for this volume and they cover a broad range of topics to do with sensation and representation consciousness and awareness and the connections between perception and knowledge and between perception and action This will be the book on the philosophy of perception a fascinating resource for philosophers and psychologists **Disjunctivism** Marcus Willaschek, 2013-09-13 Does perception provide us with direct and unmediated

access to the world around us The so called argument from illusion has traditionally been supposed to show otherwise from the subject's point of view perceptual illusions are often indistinguishable from veridical perceptions hence perceptual experience as such cannot provide us with knowledge of the world but only with knowledge of how things appear to us Disjunctive accounts of perceptual experience first proposed by John McDowell and Paul Snowdon in the early 1980s and at the centre of current debates in the philosophy of perception have been proposed to block this argument According to the traditional view a case of perception and a subjectively indistinguishable illusion or hallucination can exemplify what is fundamentally the same kind of mental state even though they differ in how they relate to the non mental environment In contrast according to the disjunctive account the concept of perceptual experience should be seen as essentially disjunctive encompassing at least two distinct kinds of mental states namely genuinely world involving perceptions and mere appearances This book presents seven recent essays on disjunctivism first published in two special issues of *Philosophical Explorations* An International Journal for the Philosophy of Mind and Action
