Redesigning Life? Brian Tokar, 2001-05-04 Genetic engineering technologies are being promoted as keys to a brighter future These writings examine the hidden hazards of the new genetic technologies and reveal the emergence of worldwide resistance to unfettered exploitation

State Agency and the Patenting of Life in International Law Bita Amani, 2016-12-05 How should a state respond to competing international obligations where the patenting of life is concerned Following the institutionalization of Intellectual Property in the world trading system under the Agreement on Trade Related Aspects of Intellectual Property Rights TRIPS states face differing challenges and restraints on their freedom to develop biopatenting programmes Through a comparative review of patenting in two key but diverging jurisdictions Canada and the US this book considers how states might exercise the right of self determination in their domestic law and policy over biopatenting to promote objectives of human welfare and fair competition Departing from existing studies this timely and important volume offers a pragmatic two step approach to state agency to resolve apparent conflicts between the regulatory options afforded by economic globalization and the need to forge domestic laws that reflect community values In this approach rich and poor countries alike are invited to assert the primacy of human rights in their industrial and cultural policies

The Suffering Gene Roy Burdon, 2003-05 Cancer kills one man out of every two and one woman out of three in the industrialized countries today And its incidence despite all efforts to the contrary is increasing at one per cent a year The fact is that some 80 per cent of cancers are likely to be due to environmental factors that could be reduced or even eradicated This book explains how our genes work and how they are adversely affected by the modern environment in which we live whether in the North or the South The factors include toxic industrial and agricultural chemicals excessive sunlight a result of the hole in the ozone layer nuclear radiation from power plants and the military other forms of radiation mobile phones electricity transmission systems food contaminants atmospheric pollutants tobacco smoke car exhaust fumes and the potential impact of genetic engineering It explains how the body defends itself from external attack what happens when these defences are overwhelmed and the need for much more careful development of new technologies industrial processes products and foodstuffs

Resisting Intellectual Property Debora J. Halbert, 2006-02-01 Over the past decade the scope of copyright and patent law has grown significantly strengthening property rights even when such rights seem to infringe upon other more basic priorities This book investigates the ways in which activists scholars and communities are resisting the expansion of copyright and patent law in the information age Debora J Halbert explores how an alternative framework for understanding intellectual property including about how we ought to think about the issues the development of social movements around specific issues and civil disobedience has developed Each chapter in the book discusses how resistance is developing in relation to a particular copyright or patent issue such as access to patented medication access to copyrighted information and music via the Internet the patenting of genetic material This controversial book examines the ways in which

the idea of intellectual property is being re thought by the victims of an over expansive legal system It will appeal to students and researchers from a range of disciplines from law and political science to computer science with an interest in intellectual property

Food Biotechnology in Ethical Perspective Paul B. Thompson, 2007-05-05 Agrifood biotechnology the genetic transformation of plants and animals through recombinant means has created controversy in the food system for more than twenty years This thoroughly revised and amended edition of Paul B Thompson s path breaking study of ethical and philosophical issues raised by this technology up to date The original 1997 edition was the first book length treatment by a philosopher to focus on food and agricultural biotechnology covering ethical issues associated with risk assessment labelling animal transformation patents and the impact of biotechnology on traditional farming communities in both the developed and developing world The new edition reflects lessons from the hotly contested debates over those issues in the intervening decade and includes wholly new discussions on ethical issues associated with livestock cloning the Precautionary Principle and the transatlantic debate between United States and European perspectives on biotechnology Thompson s unique and insightful approach to addressing the risks and questions of public acceptability associated with novel technology stands as a model for anyone interested in technological innovation and social change The book should be of interest to scholars and citizens interested in the Internet or nanotechnology while it remains an essential resource for understanding the twists and turns of debate over the role of molecular genetics in the transformation of the global food system

Biotechnology Steven P. McGiffen, 2005-03-20 Frankenfoods designer babies Dolly the Sheep and Raelian fantasists few subjects generate as much controversy and misinformation as biotechnology This book takes the reader behind the headlines to examine the new laws on genetic based technologies who s making them and why Steven P McGiffen offers a lucid analysis of the real implications of biotechnology legislation in the US and the EU and contrasts it with approaches to agricultural and medical biotech in the rest of the world He argues that the EU and America are removing decision making power from the people and their elected representatives Biotechnology regulation is a local manifestation of a global process of transferring power from the people to corporations from poor countries to rich ones from the public to the private He shows that biotechnology demands effective and democratic international decision making procedures and that we are very far from achieving them This is an indispensable guide for activists and anyone who wants to know more about how to control biotech regulation and how to resist handing control of our future to corporations
