Regenerating Agriculture Policies And Practice For Sustainability And Self Reliance:

Regenerating Agriculture Jules N. Pretty,1995 The author looks at the challenge facing agriculture today and details the concepts and characteristics of alternative sustainable agricultural practices Empirical evidence from a diverse range of agro ecological and community setting show the impact of more sustainable practices In addition existing policy frameworks and institutional processes are considered and alternatives which are known to work are presented

Regenerating Agriculture Jules N. Pretty,1995-05-17 It is becoming increasingly clear that a more sustainable agriculture can bring economic environmental and social benefits to farmers communities and nations Regenerating Agriculture draws together for the first time new empirical evidence from a diverse range of agroecological and community settings to show the impacts of more sustainable practices Twenty cases involving widespread success from Brazil Burkina Faso Honduras India Indonesia Kenya Lesotho Mali Mexico Peru Philippines and Sri Lanka are presented and are supported by field and community level data from more than 50 projects and programs in 28 countries Despite this emerging evidence many farmers still depend on high levels of external inputs Regenerating Agriculture identifies the common elements of successful programs and shows how those still using modernist approaches to agriculture can successfully turn to sustainable farming The first chapter outlines the scale of the challenge and includes analysis of sustainable agriculture s characteristics and underlying philosophies and values Pretty then presents analyses of the processes of agricultural modernization focusing on both production and conservation oriented programs and policies and the common elements of success Almost all of these successes have been achieved despite existing biased policy environments that strongly favor modern approaches to agricultural development and at the same time discriminate against sustainability Regenerating Agriculture examines policy frameworks and institutional processes then sets out 25 effective policies that are known to work to support the transition to greater sustainability and self reliance in agriculture

Indigenous Environmental Knowledge John Edington,2017-09-05 This book examines comprehensively for the first time the scope and accuracy of indigenous environmental knowledge It shows that in some spheres including agriculture house design fuel and water manipulation the high reputation of local observers is well deserved and often sufficiently insightful to warrant wider imitation However it also reveals that in certain matters notably some aspects of health care and wild species population management local knowledge systems are conspicuously unsound Not all the difficulties are of the communities own making some stem from external factors outside their control However in either case remedial measures can be suggested and this book describes especially for the benefit of practitioners what steps might be taken in rural communities to improve the quality of life The possibility of useful transfers of information from local settings to Western ones is not ignored and forms

the subject of the book's final chapter Ecological Complexity and Agroecology John Vandermeer, Ivette Perfecto, 2017-10-24 This text reflects the immense current growth in interest in agroecology and changing approaches to it. While it is acknowledged that the science of ecology should be the basis of agroecological planning, many analysts have outdated ideas about contemporary ecology. Ecology has come a long way since the old days of the balance of nature and other romantic notions of how ecological systems function. In this context, the new science of complexity has become extremely important in the modern science of ecology. The problem is that it tends to be too mathematical and technical and thus off-putting for the average student of agroecology, especially those new to the subject. Therefore, this book seeks to present ideas about ecological complexity with a minimum of formal mathematics. The book's organization consists of an introductory chapter and a second chapter providing some of the background to basic ecological topics as they are relevant to agroecosystems, e.g., soil biology and pest control. The core of the book consists of seven chapters on key intersecting themes of ecological complexity, including issues such as spatial patterns, network theory, and tipping points, illustrated by examples from agroecology and agricultural systems from around the world. Not only is the agricultural sector expected to produce adequate food, fiber, and feed and contribute to biofuels to meet the needs of a rising global population, it is expected to do so under increasingly scarce natural resources and climate change. Growing awareness of the unintended impacts associated with some agricultural production practices has led to heightened societal expectations for improved environmental, community, labor, and animal welfare standards in agriculture. *Toward Sustainable Agricultural Systems in the 21st Century* assesses the scientific evidence for the strengths and weaknesses of different production, marketing, and policy approaches for improving and reducing the costs and unintended consequences of agricultural production. It discusses the principles underlying farming systems and practices that could improve the sustainability. It also explores how those lessons learned could be applied to agriculture in different regional and international settings, with an emphasis on sub-Saharan Africa. By focusing on a systems approach to improving the
