Regenerating British Columbias Forests:

Regenerating British Columbia's Forests R. Parish, C. M. Johnson, G. Montgomery, A. Vyse, R. A. Willis, D. Winston, D.P. Lavender, 2011-11-01 Reforestation is a subject vital to the economy of British Columbia which depends heavily on its forests a valuable but expendable resource This book provides silviculturalists with a broad reference to the science and technology of reforestation in the Canadian province that forms the single most diverse forest region in North America The work combines for the first time both experiences recorded from practical reforestation projects and the results of scientific investigations The chapters of *Regenerating British Columbia's Forests* were compiled and reviewed by experts in each field of discussion Topics include the physiological bases for seedling vigour and the interaction of reforestation with seedling physiology the ecology of British Columbia's bioclimatic zones and the role of ecological site classification the application of financial analyses to reforestation decisions current technology in manual mechanical and chemical site preparation and in the use of fire to prepare planting sites recent progress in tree genetics and breeding and its relevance to the production of tree propagules nursery technology methodology in planting evaluation techniques of plantation release and the role of insects disease and small mammals and birds in the reforestation process *Regenerating British Columbia's Forests* will assist those responsible for planning reforestation projects to reach informed decisions and will challenge them to consider primarily the biological factors basic to reforestation success rather than short term costs and production technology Although its main audience is practising foresters and forestry students of British Columbia the text will be of considerable interest to foresters in other parts of Canada the United States and Europe who manage reforestation

Regenerating British Columbia's Forests Denis P. Lavender, 1990-01-01 *Regenerating British Columbia's Forests* will assist those responsible for planning reforestation projects to reach informed decisions and will challenge them to consider primarily the biological factors basic to reforestation success rather than short term costs and production technology Although its main audience is practising foresters and forestry students of British Columbia the text will be of considerable interest to foresters in other parts of Canada the United States and Europe who manage reforestation

Regenerating British Columbia's Forests Denis Peter Lavender, 1989

British Columbia's Inland Rainforest Susan K. Stevenson, Harold M. Armleder, André Arsenault, Darwyn Coxson, S. Craig DeLong, Michael Jull, 2011-07-01 The vast temperate rainforests of coastal British Columbia are world renowned but much less is known about the other rainforest located 500 kilometres inland along the western slopes of the interior mountains The unique integration of continentality and humidity in this region favours the development of lush rainforest communities that incorporate both coastal and boreal elements This book brings together for the first time a broad spectrum of information about the ecology management and conservation of this distinctive ecosystem Accessibly written and generously illustrated the chapters examine the physical social economic and ecological dimensions of the rainforest They also look at how the delicate balance of this ecosystem has been threatened by human use and climate

change In the past governments encouraged the forest industry to clearcut the decadent old stands and replace them with rapidly growing young trees of other species More recently out of concern for the ecological consequences of such practices researchers have begun to examine alternative management strategies This book offers a vision that combines various strategies in order to balance the conservation of the inland rainforest as a fully functioning ecosystem with human use of its diverse resources *Proceedings of the International Workshop on Large-Scale Reforestation* Jack K. Winjum,Paul E. Schroeder,Mary J. Kenady,1991 **Climate Change and Forest Management in the Western Hemisphere** Mohammed Dore,2001-01-25 Conserve biodiversity with effective forest management practices This valuable book examines integrated forest management in the Americas Climate Change and Forest Management in the Western Hemisphere takes a close look at such important international issues as global warming and the destruction of the Amazon rainforest It offers tested suggestions for combining productive economic use of forest products with sustainable ecologically sound management practices Here you will find case studies from representative forests in North Central and South America This solidly researched book explores the barriers to integrating environmental and economic approaches to forest management It also offers practical suggestions for overcoming those barriers including economic incentives for sustainable use and the conservation of biodiversity Climate Change and Forest Management in the Western Hemisphere also explores the role of the Brazilian rainforest in the global carbon cycle sustainable use of rainforests the valuation of forests for carbon sequestration plant biodiversity in managed timber forests issues of deforestation and reforestation and much more Climate Change and Forest Management in the Western Hemisphere offers a comprehensive overview of a vital subject It is an essential resource for forestry specialists environmental economists and anyone interested in climate change or sustainable agriculture

Tree Planters' Notes ,2011 Some no include reports compiled from information furnished by State Foresters and others Seed Ecophysiology of Temperate and Boreal Zone Forest Trees RobertE. Farmer,2017-11-01 This is the first truly modern book solely devoted to seed reproduction of forest trees from flowering to establishment with emphasis on the interaction of environment with physiological processes Focus is on seed function in natural settings and the application of information to natural regeneration of forests This easy to read text addresses important principles and provides in depth coverage of existing literature Presentation of the information is organized to allow for a natural development of the main theme with full explanations of such important components as seed production dispersal and germination as well as the integral parts played by water temperature light chemicals animals pathogens and aging A highly useful book for investigators practitioners or students **Ecology and Management of Larix Forests** ,1995 Ecology and Management of Sitka Spruce N. Merle Peterson,Patrick Martin,2011-11-01 Sitka spruce the largest of the world s spruces is an important component of British Columbia s coastal forests Its ecology gives it a special place in the sustainable management of the province s forests However in west coast forestry it is poorly known in comparison with its main coniferous companions

Douglas fir western redcedar and western hemlock As an important international forestry resource it is crucial that Sitka spruce its ecology and the ecosystems in which it occurs be clearly understood by those who are involved with its management This book is the most recent major work on the ecology and management of Sitka spruce The authors describe how this fascinating tree reproduces grows and functions in its natural geographic range They discuss both the ecology of Sitka spruce and silvicultural questions such as original plantation spacing juvenile spacing and fertilization to accelerate the harvestability of second growth coastal spruce stands Sitka spruce derives its importance not only from its prominence as an international transportable genetic resource but also from its role in riparian systems and its biodiversity values Here in North America s west coast rainforest this magnificent tree illustrates the ecology of complex forest ecosystems and their cultural wilderness historic and economic values
