Systems William Wolfgang Arrasmith, 2025-06-30 There has been a lot of innovation in systems engineering and some

fundamental advances in the field of optics imaging lasers and photonics that warrant attention This volume focuses on

applications tools and techniques of systems engineering related topics from government industrial and academic settings

such as development and operations DevOps agile methods and the concept of the digital twin Handbook of Systems

Engineering and Analysis of Electro Optical and Infrared Systems Applications Tools and Techniques offers more information

on the application of decision and risk analysis and statistical methods in systems engineering such as design of experiments

DOX methods including statistical process control hypothesis testing analysis of variance blocking 2k factorial analysis and

regression analysis It includes new material using model based systems engineering and systems architecture methods in a

system level design application The integration of recent high speed atmospheric turbulence research results in the optical

technical examples and case studies to illustrate the new developments is also included A presentation of new optical

technical materials for adaptive optics AO and atmospheric turbulence compensation ATC systems that are based on

illumination from passive sources natural light or active sources coherent light like from lasers provides the technical focus

for the systems engineering methods and techniques Chapter 13 focuses on the technical aspects of the design process and

uses the systems level design as an illustration In addition to covering lifecycle cost estimation methods and applying them to

an integrated case study that is used to illustrate important concepts and techniques throughout this work the final section

brings everything together in terms of technical cost and schedule performance Because this volume blends modern day systems engineering methods with detailed optical systems analysis and applies these methodologies to EO IR systems this new edition is an excellent text for professionals in STEM disciplines that work with optical or infrared systems It s also a great practical reference text for the practicing engineer and a solid educational text for graduate level systems engineering engineering science and technology students
