System Level Design with .Net Technology El Mostapha

Aboulhamid, Frederic Rousseau, 2018-10-03 The first book to harness the power of NET for system design. System Level Design with NET Technology constitutes a software based approach to design modeling, verification, and simulation. World class developers who have been at the forefront of system design for decades explain how to tap into the power of this dynamic programming environment for more effective and efficient management of metadata and introspection and interoperability between tools. Using readily available technology, the text details how to capture constraints and requirements at high levels and describes how to percolate them during the refinement process. Departing from proprietary environments built around System Verilog and VHDL, this cutting edge reference includes an open source environment, ESys NET, that readers can use to experiment with new ideas, algorithms, and design methods and to expand the capabilities of their current tools. It also covers Modeling and simulation including requirements specification, IP reuse, and applications of design patterns to hardware software systems. Simulation and validation including transaction based models, accurate simulation at cycle and transaction levels, cosimulation, and acceleration technique, as well as timing specification and validation. Practical use of the ESys NET environment. Worked examples, end of chapter references, and the ESys NET implementation test bed make this the ideal resource for system engineers and students looking to maximize their embedded system designs.

John Dee's Actions with Spirits (Volumes 1 and 2)

Christopher Whitby, 2013-02-11 This was originally a two volume set which is now bound as one. Here is presented an investigation of the nature of the earliest extant records of the supposed communication with angels and spirits of John Dee 1527-1608 with the assistance of his two mediums or scryers, Barnabas Saul and Edward Kelly. Volume 2 of this work is a transcription of the records in Dee's hand contained in Sloane MS 3188 which has been transcribed only once before by Elias Ashmole in 1672. Volume 1 is an introduction and thorough commentary to the text which is primarily explaining its many obscurities. The author describes the physical state of the manuscript and its history, then continues with a biography of Dee and his scryers and some background to Renaissance occult philosophy. Further chapters address the arguments that the manuscript represents a conscious fraud or a cryptographical exercise and describe the magical system and instruments evolved during the communications or Actions. The last fascinating chapter examines Dee's motives for believing so strongly in the truth of the Actions and suggests that a principal motive was the conviction, not held by Dee alone, that a new age was about to dawn upon earth.

Memory in Oral Traditions

David C. Rubin, 1995 Long studied by anthropologists, historians, and linguists, oral

traditions have provided a wealth of fascinating insights into unique cultural customs that span the history of humankind In this groundbreaking work cognitive psychologist David C Rubin offers for the first time an accessible comprehensive examination of what such traditions can tell us about the complex inner workings of human memory Focusing in particular on their three major forms of organization theme imagery and sound pattern Rubin proposes a model of recall and uses it to uncover the mechanisms of memory that underlie genres such as counting out rhymes ballads and epics The book concludes with an engaging discussion of how conversions from oral to written communication modes can predict how cutting edge computer technologies will affect the conventions of future transmissions Throughout Rubin presents the results of important original research as well as new perspectives on classical subjects Splendidly written and farsighted *Memory in Oral Traditions* will be eagerly read by students and researchers in areas as diverse as cognitive psychology literary studies classics and cultural anthropology

Action Patterns in Business Process Models Sergey Smirnov, Weidlich, Matthias, Mendling, Jan, Weske, Mathias, 2009 Business process management experiences a large uptake by the industry and process models play an important role in the analysis and improvement of processes While an increasing number of staff becomes involved in actual modeling practice it is crucial to assure model quality and homogeneity along with providing suitable aids for creating models In this paper we consider the problem of offering recommendations to the user during the act of modeling Our key contribution is a concept for defining and identifying so called action patterns chunks of actions often appearing together in business processes In particular we specify action patterns and demonstrate how they can be identified from existing process model repositories using association rule mining techniques Action patterns can then be used to suggest additional actions for a process model Our approach is challenged by applying it to the collection of process models from the SAP Reference Model

Approaches to Enhance the Performance of Simheuristic Methods in the Optimisation of Multi-echelon Logistics Distribution Networks Maja Ammouriouva, 2021 Management of logistics distribution networks is a challenging task Decision makers rely on logistics assistance systems that recommend actions to optimise the networks These systems can be based on simheuristics to benefit from metaheuristics in exploring possible solutions and on simulation for modelling the networks This book presents three approaches to recommend promising solutions to optimise the networks with fewer simulation runs The first approach utilises information from the network to guide the search of metaheuristics In this approach domain specific information is defined and assigned to actions The metaheuristic algorithm utilises this domain specific information to find more promising solutions The second approach is reducing the number of possible solutions by grouping actions with respect to their domain specific attributes Here the smaller solution space decreases the number of required simulation runs The last approach looks for equivalent solutions that cause the same changes in the network This approach aims to skip unnecessary evaluations and thus simulation effort *Geopolitical Landscapes of Donald Trump* Carlos
