Michael R. Hamblin,Ying-Ying Huang,2013-10-22 Providing the most comprehensive up to date coverage of this exciting biomedical field Handbook of Photomedicine gathers together a large team of international experts to give you a complete account of the application of light in healthcare and medical science The book progresses logically from the history and fundamentals of photomedicine to diverse therapeutic applications of light known collectively as phototherapies It facilitates your understanding of human diseases caused by light the rationale for photoprotection and major applications of phototherapy in clinical practice The handbook begins with a series of historical vignettes of pioneers from the last two centuries It also presents the fundamentals of physics and biology as applied to photomedicine It next examines conditions and diseases caused by light including skin cancer dermatoses and immunosuppression The remainder of the book focuses on

the most important clinical therapeutic applications of different kinds of light that vary in both wavelength and intensity The book discusses ultraviolet phototherapy for skin diseases and infections and presents the basic science of photodynamic therapy and its use in cancer therapy and other medical specialties It then covers mechanistic studies and clinical applications of low level laser light therapy as well as the use of high power or surgical laser therapy in specialties such as dentistry and dermatology The book concludes with a collection of miscellaneous types of phototherapy

Ostojic, 2022-10-20 Molecular Nutrition and Mitochondria Metabolic Deficits Whole Diet Interventions and Targeted Nutraceuticals provides a comprehensive examination of molecular aspects of mitochondrial nutrition and how dietary compounds might impact the treatment of mitochondrial dysfunction Beginning with an overview of the fundamentals of mitochondria physiology and the methods used to evaluate mitochondrial imbalance in clinical practice the book goes on to outline nutritional shortfalls in mitochondrial dysfunction and highlights the complex intra organelle milieu affecting interactions between food compounds and mitochondrial co factors metabolites and signaling molecules Further sections explore the impact of essential nutrients such as vitamin E fatty acids and complex lipids on mitochondrial biogenesis as well as non essential bioactive compounds originating from food that can be evaluated for their mitochondria modulating potential such as mitochondria targeted small molecule antioxidants plant based pigments and organic compounds nucleotides non proteogenic amino acids and derivatives and mitochondria specific enzyme mimetics from food Molecular Nutrition and Mitochondria covers the key impacts of nutrition on mitochondria and is the ideal reference for researchers students and clinicians looking to develop an in depth understanding of how dietary compounds can prevent and treat disorders associated with mitochondrial dysfunction Describes the fundamentals of mitochondria physiology and considers the methods used to evaluate mitochondrial imbalance in clinical practice Provides broad biochemical and metabolic background on nutritional deficits found in mitochondrial dysfunction Explores the prevention and treatment of various inherited and acquired disorders associated with mitochondrial dysfunction Discusses the link between the dosage for each nutrient nutritional vs pharmacological and the clinical effect Features a dedicated section on whole diet interventions and mitochondrial function

Processing and Turnover of Proteins and Organelles in the Cell S. Rapoport, T. Schewe, 2014-05-09 Processing and Turnover of Proteins and Organelles in the Cell is a collection of papers that tackles the problems of post translational processes along with the dynamics of cell components The materials in the title are organized thematically The text first presents articles dealing with post translational processing such as the mode of anchoring of sucrase isomaltase to the small intestinal brush border membrane and its biosynthetic implications as well as the decay and restoring in succinate dehydrogenase The next papers discuss topics related to the selective degradation of proteins such as selective control of proteinase action in yeast cells and studies of the mechanism and selectivity of intracellular protein breakdown The final set of papers covers the turnover of organelles which includes biogenesis and turnover of peroxisomes

Nutrition and Quality of Life in the Elderly Daniela Caetano Gonçalves ,Gabriela Salim de Castro,2024-06-12 The WHO estimates that by 2050 30% of the world's population will be elderly The increased life expectancy of the population coupled with falling fertility contributes to this scenario in many countries Although the life expectancy of the population has increased the recurring concern is to ensure the quality of life of this group Some diseases are directly associated with the aging process such as sarcopenia and osteoporosis On the other hand chronic degenerative diseases such as diabetes hypertension and cancer are associated with long term inadequate health habits and therefore are more prevalent in the elderly Among the factors that contribute to a lifestyle that influences the onset of these diseases we can highlight sedentarism and poor diet quality
