Middleware 2007 Renato Cerqueira, Roy H. Campbell, 2007-11-01 This book constitutes the refereed proceedings of the ACM IFIP USENIX 8th International Middleware Conference 2007 held in Newport Beach CA USA in November 2007 The 22 revised full papers presented were carefully reviewed and selected from 108 submissions The papers are organized in topical sections on component based middleware mobile and ubiquitous computing grid and cluster computing enhancing communication resource management reliability and fault tolerance Delay Tolerant Networks Athanasios V. Vasilakos, Yan Zhang, Thrasyvoulos Spyropoulos, 2016-04-19 A class of Delay Tolerant Networks DTN which may violate one or more of the assumptions regarding the overall performance characteristics of the underlying links in order to achieve smooth operation is rapidly growing in importance but may not be well served by the current end to end TCP IP model Delay Tolerant Networks Protocols and Applicat *RFID Technologies for Internet of Things* Min Chen, Shigang Chen, 2016-11-02 This book introduces applications of RFID on the Internet of things under the emerging technologies for tag search anonymous RFID authentication and identification of networked tags A new technique called filtering vector a compact data structure that encodes tag IDs is proposed to enable tag filtration meeting the stringent delay requirements for real world applications Based on filtering vectors a novel iterative tag search protocol is designed which progressively improves the accuracy of search result and reduces the time of each iteration by using the information learned from the previous iterations Moreover the protocol is extended to work under noisy channel The authors also make a fundamental shift from the traditional design paradigm for anonymous RFID authentication by following an asymmetry design principle that pushes most complexity to the readers while leaving the tags as simple as possible A novel technique is developed to dynamically generate random tokens on demand for authentication The token based authentication protocol only requires O 1 communication overhead and online computation overhead per authentication for both readers and tags Finally the authors investigate the problem of networked tag identification The traditional contention based protocol design will incur too much energy overhead in multihop tag systems and a reader coordinated design that significantly serializes tag transmissions performs much better In addition a solution based on serial numbers is proposed to achieve load balancing thereby reducing

the worst case energy cost among the tags Designed for researchers and professionals this SpringerBrief will interest individuals who work in efficiency security and privacy Advanced level students focused on network design will also benefit from the content

Encyclopedia on Ad Hoc and Ubiquitous Computing Dharma P. Agrawal, Dr. Bin Xie, 2010 Ad hoc and ubiquitous computing technologies have received extensive attention in both the academia and industry with the explosive growth of wireless communication devices These technologies are beneficial for many applications such as offering futuristic high bandwidth access for users and are expected to offer more exciting and efficient services anytime and anywhere In order to satisfy these diverse applications the design issues of various wireless networks such as ad hoc sensor and mesh networks are extremely complicated and there are a number of technique challenges that need to be explored involving every layer of the OSI protocol stack This book aims to provide a complete understanding of these networks by investigating the evolution of ad hoc sensor and mesh networking technologies from theoretic concept to implementation protocols from fundamentals to real applications It provides the necessary background material needed to go deeper into the subject and explore the research literature The explanation in the book is therefore sufficiently detailed to serve as a comprehensive reference for students instructors researchers engineers and other professionals building their understanding of these networks

When we were elected to chair WG 11.4 we asked ourselves whether the security and also the computer science community at large benefit from this workshop. In particular as there are many too many security conferences it has become difficult to keep up with the field. After having talked to many colleagues far too many to list all of them here we decided to try a different kind of workshop one where people would attend to discuss open research topics in our field as typically only happens during the coffee breaks of ordinary conferences. To enable this we called for abstracts of 2 pages where the authors outline the open problems that they would like to discuss at the workshop the intent being that the author would be given 15 minutes to present the topic and another 15 minutes for discussion. These abstracts were then read by all members of the Program Committee and ranked by them according to whether they thought this would lead to an interesting talk and discussion. We then simply selected the abstracts that got the best rankings. We were happy to see this result in many really interesting talks and discussions in the course of the workshop. Of course these lively and direct discussions are almost impossible to achieve in a printed text. Still we asked the authors to distill the essence of these discussions into full papers. The results are in your hands *Embedded Systems Handbook 2-Volume Set* Richard Zurawski, 2018-10-08 During the past few years there has been an dramatic upsurge in research and development implementations of new technologies and deployments of actual solutions and technologies in the diverse
