Oxidants And Antioxidant Defense Systems:

Oxidants and Antioxidant Defense Systems Tilman Grune, 2005-01-18 Oxidative stress is one of the major symptoms accompanying physiological functions and numerous diseases Oxidants and free radicals are connected with diseases such as cancer diabetes infectious cardiovascular and neurodegenerative diseases and also in the aging process itself Therefore comprehensive knowledge of the underlying mechanisms of oxidant and free radical production and the defence against this permanent threat to cells is important for the understanding of many physiological and pathophysiological processes This book overviews the basic mechanisms of oxidant formation and antioxidant defences In addition the formation of oxidants and their detoxification the damage of macromolecules and the major repair and removal systems will be highlighted

contributors to complete vision loss in the western hemisphere is diabetes precipitated by metabolic syndrome In some developing countries micronutrient deficiencies are major contributory factors to impaired vision However there are a range of ocular defects that have either their origin in nutritional deficiencies or excess or have been shown to respond favorably to nutritional components The eye from the cornea to the retina may be affected by nutritional components Effects may be physiological or molecular This book represents essential reading for nutritionists dietitians optometrists ophthalmologists opticians endocrinologists and other clinicians and researchers interested in eye health and vision in general Saves clinicians and researchers time in quickly accessing the very latest details on a broad range of nutrition ocular health and disease issues Provides a common language for nutritionists nutrition researchers optometrists and ophthalmologists to discuss how dietary and nutritional factors and related diseases and syndromes affect the eye Preclinical clinical and population studies will help nutritionists dietitians and clinicians map out key areas for research and further clinical recommendations

Targeting Cellular Signalling Pathways in Lung Diseases Kamal Dua,Raimar Löbenberg,Ângela Cristina Malheiros Luzo,Shakti Shukla,Saurabh Satija,2021-07-02 The book comprehensively reviews and provides detailed insight into the cellular and molecular signalling mechanisms involved in pathophysiology of various respiratory diseases towards developing effective therapeutic strategies in the management and treatment of lung disease It also covers promising advances in the field of therapeutics that could lead to novel clinical therapies capable of preventing or reversing the disease features including novel strategies for targeting chronic lung diseases using advanced drug delivery systems Importantly the book examines the significance and relevance of the plant extracts and their constituents with therapeutic efficiencies against lung diseases As such the book offers a blend of translational biological chemical and drug delivery aspects relevant to respiratory diseases thus offering a valuable resource for pulmonologists and translational researchers working in the field of pulmonary biology and respiratory medicine [Zinc Signals in Cellular Functions and Disorders](#) Toshiyuki Fukada,Taiho

Kambe,2014-09-25 This book describes the crucial role of zinc signals in biological processes on a molecular and physiological basis discussing future directions and questions underlying this unique phenomenon To accomplish this a group of worldwide leaders in the field who have made outstanding contributions overview zinc signals from a professional standpoint Zinc plays an indispensable role in various cellular processes It regulates a great number of protein functions including transcription factors enzymes adapters and growth factors as a structural or catalytic factor or both Recently another function of zinc has received extensive interest and attention because of its potential importance as a signaling mediator Zinc plays a dynamic role as an intracellular and extracellular signaling factor and thus regulates cellular signaling pathways which enables communication between cells conversion of extracellular stimuli to intracellular signals and control of various intracellular events These functions of zinc have become recognized as zinc signals which play critical roles in physiology and therefore their imbalance can cause a variety of problems with regard to human health Because the notion of

zinc signals is quite new and no integrative review books focusing on them have yet been published we believe this book will provide very timely information on the subject and thus should be of importance and interest to a wide range of readers

Oxidative Stress, Inflammation, and Health Young-Joon Surh, 2005-05-24 Specifically focusing on the redox regulation of cell signaling responsible for oxidative stress and inflammatory tissue damage this reference provides a comprehensive overview of cutting edge research on the intracellular events mediating or preventing oxidative stress and pro inflammatory processes induced by endogenous and xenobiotic factors and Cumulated Index Medicus, 1993

Reactive Oxygen Species (ROS) in Living Cells Filip Cristiana, Albu Elena, 2018-05-23 Oxygen represents only 20% of the Earth's atmosphere yet it is vital for the survival of aerobic organisms There is a dark part of the use of oxygen that consists in generating reactive species that are potentially harmful to living organisms Moreover reactive oxygen species can combine with nitrogen derivatives and generate many other reactive species Thus living organisms are continuously assaulted by reactive species from external or internal sources However the real danger comes in the case of high concentrations and prolonged exposure to these species This book presents an image of the mechanisms of action of reactive species and emphasizes their involvement in diseases Inflammation and cancer are examined to determine when and how reactive species turn the evolution of a benign process to a malignant one Some answers may come from recent studies indicating that reactive species are responsible for epigenetic changes The Respiratory Burst and Its Physiological Significance A.J. Sbarra, R.R. Strauss, 2012-12-06 When phagocytes are exposed to a number of different stimuli they undergo dramatic changes in the way they process oxygen Oxygen uptake increases markedly frequently more than 50 fold the phagocytes begin to produce large quantities of superoxide and hydrogen peroxide and they immediately begin to metabolize large amounts of glucose by way of the hexose monophosphate shunt This series of changes has become known as the respiratory burst It was first believed that the major function of this respiratory burst was to generate powerful antibacterial agents by the partial reduction of oxygen It is becoming apparent that the respiratory burst has much wider application and its physiological function in many different biological areas is clear In this volume we have attempted to bring together the work of experts who have published extensively on the involvement of the respiratory burst in different physiological functions In the first three chapters Dr Borregaard and Dr Berton and co workers and Dr Roos and co workers bring together what is known about the respiratory burst They present up to date versions of the biochemical and metabolic activities associated with the burst In Chapter 4 Dr Styrt and Dr Klempner discuss the respiratory burst as it affects cellular ion homeostasis Dr Cohen and Dr Britigan Chapter 5 present some interesting data on the competition between the respiratory burst and bacteria for oxygen Dr Dobrina and Dr
