Pacheco-Torgal, Jamal Khatib, Francesco Colangelo, Rabin Tuladhar, 2024-04-27 Plastic pollution is a complex environmental problem. The use of recycled plastics in the modification of concrete materials has a dominant role to play in the move towards sustainable construction. *Reuse of Plastic Waste in Eco efficient Concrete* presents the latest research findings on the application and use of recycled plastic waste in sustainable construction. Divided over four parts, the chapters cover various techniques for processing and separation of plastic wastes, use of recycled plastics as aggregates in modified concrete as well as lightweight reinforced concrete applications too. There is also an entire section dedicated to asphalt mixtures. The book provides technological solutions on how recycled plastic wastes can be applied in concrete manufacturing. It will be a valuable reference source for academic and industrial researchers who are working with waste materials and the use of recycled plastics in concrete as well as for civil and structural engineers, polymer production technologists and concrete manufacturers. Describes the main types of recycled plastics that can be applied in concrete manufacturing. Presents state of the art knowledge on the properties of conventional concrete with recycled plastics. Discusses the technological challenges for concrete manufacturers for mass production of recycled concrete from plastic waste. Covers lifecycle cost analysis, production challenges and long term performance analysis. **3rd fib Congress Washington USA** FIB - International Federation for Structural Concrete, 2010-06-01 *Concrete Technology (Theory and Practice)*, 8e Shetty M.S. & Jain A.K., 2019 *Concrete Technology Theory and Practice* gives students of Civil Engineering a thorough understanding of all aspects of concrete technology from first principles. Performance Assessment of Construction Chemical in Building Construction Dr. Ashad Ullah Qureshi, 2022-06-01 Today there is practically no concrete without admixtures or construction chemicals They are used in concrete at the time of construction or during maintenance repairs to produce several desirable properties Twenty years ago construction chemicals were rarely adopted in India but today there is a great awareness among practicing Engineers contractors and public about the use of construction chemicals To suit the demand in India a number of companies are emerging in the field of construction chemicals Plenty of such products are available in the market But there are no specifications and standards about their usage In the absence of these norms the companies advertise their products as Hi tech and Super stuff The only literature available is the manufacturers brochures Therefore the user finds it very difficult to choose a particular product A comprehensive study about these chemicals was made in this work to evaluate their performance by conducting a series of laboratory tests

Recent Advances on Green Concrete for Structural Purposes Joaquim A.O. Barros, Liberto Ferrara, Enzo Martinelli, 2017-05-29 This book is mainly based on the results of the EU funded UE FP7 Project EnCoRe which aimed to characterize the key physical and mechanical properties of a novel class of advanced cement based materials incorporating recycled powders and aggregates and or natural ingredients in order to allow partial or even total replacement of conventional constituents More specifically the project objectives were to predict the physical and mechanical performance of concrete with recycled aggregates to understand the potential contribution of recycled fibers as a dispersed reinforcement in concrete matrices and to demonstrate the feasibility and possible applications of natural fibers as a reinforcement in cementitious composites All of these aspects are fully covered in the book The opening chapters explain the material concept and design and discuss the experimental characterization of the physical chemical and mechanical properties of the recycled raw constituents as well as of the cementitious composite incorporating them The numerical models with potentialities for describing the behavior at material and structural level of constructions systems made by these composites are presented Finally engineering applications and guidelines for production and design are proposed
