## **People And Predators From Conflict To Coexistence:**

**People and Predators** Defenders of Wildlife, 2012-06-22 Carnivores provide innumerable ecological benefits and play a unique role in preserving and maintaining ecosystem services and function but at the same time they can create serious problems for human populations A key question for conservation biologists and wildlife managers is how to manage the world's carnivore populations to conserve this important natural resource while mitigating harmful impacts on humans In *People and Predators* leading scientists and researchers offer case studies of human carnivore conflicts in a variety of landscapes including rural urban and political The book covers a diverse range of taxa geographic regions and conflict scenarios with each chapter dealing with a specific facet of human carnivore interactions and offering practical concrete approaches to resolving the conflict under consideration Chapters provide background on particular problems and describe how challenges have been met or what research or tools are still needed to resolve the conflicts *People and Predators* will help readers to better understand issues of carnivore conservation in the 21st century and provides practical tools for resolving many of the problems that stand between us and a future in which carnivores fulfill their historic ecological roles *People and Predators* Nina Fascione, Aimee Delach, Martin Edgar Smith, 2004 Human populations carnivores generally have a strained relationship which presents problems for conservationists This book looks at aspects of human carnivore interaction across a range of landscapes environments Ecological Vulnerability Katie Woolaston, 2022-06-23 Humans are responsible for biodiversity loss in many related and sometimes conflicting ways Human wildlife conflict commonly defined as any negative interaction between people and wildlife is a primary contributor to wildlife extinction and a manifestation of the destructive relationship that people have with wildlife The author presents this wicked problem in a social and legal context and demonstrates that legal institutions structurally deny human wildlife conflict while exacerbating conflict promoting values consistent with individual autonomy and ignoring the interconnected vulnerabilities shared by human and non human species alike It is the use of international and state law that sheds light on existing conflicts including dingo conflict on K Gari Fraser Island in Australia elephant conflict in Northern Botswana and the global wildlife trade contributing to COVID 19 This book presents a critical analysis of human wildlife conflict and its governance to guide lawyers scientists and conservations alike in the transformation of the management of human wildlife conflict *Human - Wildlife Conflicts in Europe* Reinhard A. Klenke, Irene Ring, Andreas Kranz, Niels Jepsen, Felix Rauschmayer, Klaus Henle, 2013-03-23 This book is about conflicts between different stakeholder groups triggered by protected species that compete with humans for natural resources It presents key ecological features of typical conflict species and mitigation strategies including technical mitigation policy instruments and the design of participatory decision strategies involving relevant stakeholders The book provides not only case studies from various European countries it also presents a framework for the development of biodiversity conflict reconciliation action plans that can be used globally Ecology and Conservation of the Maned Wolf Adriana G.

Consorte-McCrea, Eliana Ferraz Santos, 2013-10-24 Wolves are controversial figures worldwide and much effort has focused on how to conserve them while addressing public concerns With its solitary habits and fruit eating diet the endangered maned wolf roams the South American grasslands and swamps playing a vital part in maintaining biodiversity hotspots Compared to the grey wolf little is known about its relationship with local people and the environment and the reasons for its decline making research about this unique species an urgent concern Ecology and Conservation of the Maned Wolf Multidisciplinary Perspectives gathers the work of leading researchers from diverse disciplines and countries covering up to date research on the biology ecology and conservation of the maned wolf It presents innovative insights that can benefit conservation strategies and offers perspectives for the future of the species The book is divided into three parts Part I explains the general issues concerning the maned wolf population viability the relationship between maned wolves and people and the management of captive maned wolves It also reviews current aspects of species biology including conservation genetics feeding ecology social structure and reproduction and conservation medicine Part II contains case studies that present knowledge gathered from conservation programs and field research in all countries where the species is currently found Brazil Uruguay Argentina Bolivia and Paraguay Part III offers perspectives from diverse fields of research exploring the challenges and opportunities connecting maned wolf conservation efforts with those of its habitat and of other endangered species This includes education and communication tools the application of human dimensions research to maned wolf conservation ethnoconservation perspectives and the ecological and socioeconomic challenges to the conservation of the cerrado habitat *People and Predators* Defenders of Wildlife, 2004-10-06 Human populations carnivores generally have a strained relationship which presents problems for conservationists This book looks at aspects of human carnivore interaction across a range of landscapes environments **Problematic Wildlife II** Francesco Maria Angelici, Lorenzo Rossi, 2020-05-07 In a world where habitats are constantly changing and the impact of anthropization on the environment is increasingly intense interactions between human and wildlife are becoming more and more complex Some species pose problems for human activities while many others need to be helped in order to continue to exist This book follows the first volume called *Problematic Wildlife* edited by F M Angelici and published by Springer in 2016 which has had considerable success with readers and critics The volume includes 21 chapters divided into 7 parts devoted specific topics which are approached in a multidisciplinary way There are both review chapters and specific cases always bearing in mind the interest for an international audience The book is useful both for scientists wildlife specialists conservationists zoologists ecologists university students nature managers and for those who live in contact with wildlife and its problems such as farmers shepherds hunters urban planners and staff of parks and nature reserves Its ultimate goal is to offer scientific and pragmatic approaches to manage each categories of problematic species **Cheetahs: Biology and Conservation**, 2017-11-28 Cheetahs Biology and Conservation reports on the science and conservation of the cheetah This volume

demonstrates the interdisciplinary nature of research and conservation efforts to study and protect the cheetah. The book begins with chapters on the evolution, genetics, physiology, ecology, and behavior of the species, as well as distribution reports from range countries. These introductory chapters lead into discussions of the challenges facing cheetah survival, including habitat loss, declining prey base, human-wildlife conflict, illegal trade, and newly emerging threats, notably climate change. This book also focuses on conservation strategies and solutions, including environmental education and alternative livelihoods. Chapters on the role of captive cheetahs to conservation and the long-term research of the species are included, as are a brief discussion of the methods and analyses used to study the cheetah. The book concludes with the conservation status and future outlook of the species. *Cheetahs: Biology and Conservation* is a valuable resource for the regional and global communities of cheetah conservationists, researchers, and academics. Although cheetah-focused, the book provides information relevant to the study of broader topics such as wildlife conservation, captive breeding, habitat management, conservation biology, and animal behaviour. Cover photograph by Angela Scott. Includes chapters by the world's leading cheetah researchers and practitioners who have focused their efforts on this high-profile species of conservation concern. Provides findings as a combination of scientific detail and basic explanations so that they can be available not only to cheetah researchers and conservationists but also to policy makers, business leaders, zoo managers, academics, students, and people interested in the cheetah and its future. Presents the current knowledge of the species, helping lay the foundations and best practices for cheetah conservation and research worldwide. Additional protocols and forms which were provided by authors can be found at the *Cheetahs: Biology and Conservation* companion site: <https://www.elsevier.com/books-and-journals/book-companion/9780128040881>. **Serengeti IV** Anthony R. E. Sinclair, Kristine L. Metzger, Simon A. R. Mduma, John M. Fryxell, 2015-05-11. The vast savannas and great migrations of the Serengeti conjure impressions of a harmonious and balanced ecosystem. But in reality, the history of the Serengeti is rife with battles between human and non-human nature. In the 1890s and several times since, the cattle virus rinderpest at last vanquished in 2008 devastated both domesticated and wild ungulate populations, as well as the lives of humans and other animals who depended on them. In the 1920s, tourists armed with the world's most expensive hunting gear filled the grasslands. And in recent years, violence in Tanzania has threatened one of the most successful long-term ecological research centers in history. *Serengeti IV*, the latest installment in a long-standing series on the region's ecology and biodiversity, explores the role of our species as a source of both discord and balance in Serengeti ecosystem dynamics. Through chapters charting the complexities of infectious disease transmission across populations, agricultural expansion, and the many challenges of managing this ecosystem today, this book shows how the people and landscapes surrounding crucial protected areas like Serengeti National Park can and must contribute to Serengeti conservation. In order to succeed, conservation efforts must also focus on the welfare of indigenous peoples, allowing them both to sustain their agricultural practices and to benefit from the natural resources provided by protected

areas an undertaking that will require the strengthening of government and education systems and as such will present one of the greatest conservation challenges of the next century

### **Key Topics in Conservation Biology 2** David W.

Macdonald, Katherine J. Willis, 2013-02-06 Following the much acclaimed success of the first volume of Key Topics in Conservation Biology this entirely new second volume addresses an innovative array of key topics in contemporary conservation biology Written by an internationally renowned team of authors Key Topics in Conservation Biology 2 adds to the still topical foundations laid in the first volume published in 2007 by exploring a further 25 cutting edge issues in modern biodiversity conservation including controversial subjects such as setting conservation priorities balancing the focus on species and ecosystems and financial mechanisms to value biodiversity and pay for its conservation Other chapters setting the framework for conservation address the sociology and philosophy of peoples relation with Nature and its impact on health and such challenging practical issues as wildlife trade and conflict between people and carnivores As a new development this second volume of Key Topics includes chapters on major ecosystems such as forests islands and both fresh and marine waters along with case studies of the conservation of major taxa plants butterflies birds and mammals A further selection of topics consider how to safeguard the future through monitoring reserve planning corridors and connectivity together with approaches to reintroduction and re wilding along with managing wildlife disease A final chapter by the editors synthesises thinking on the relationship between biodiversity conservation and human development Each topic is explored by a team of top international experts assembled to bring their own cross cutting knowledge to a penetrating synthesis of the issues from both theoretical and practical perspectives The interdisciplinary nature of biodiversity conservation is reflected throughout the book Each essay examines the fundamental principles of the topic the methodologies involved and crucially the human dimension In this way Key Topics in Conservation Biology 2 like its sister volume Key Topics in Conservation Biology embraces issues from cutting edge ecological science to policy environmental economics governance ethics and the practical issues of implementation Key Topics in Conservation Biology 2 will like its sister volume be a valuable resource in universities and colleges government departments and conservation agencies It is aimed particularly at senior undergraduate and graduate students in conservation biology and wildlife management and wider ecological and environmental subjects and those taking Masters degrees in any field relevant to conservation and the environment Conservation practitioners policy makers and the wider general public eager to understand more about important environmental issues will also find this book invaluable

*Wildlife Politics* Bruce Rocheleau, 2017-03-30 Attitudes towards charismatic animals such as tigers lions bears and wolves vary greatly and change over time resulting in bitter political debates This comprehensive book identifies and analyses the factors that influence policies across the globe highlighting how this impacts conservation as a whole Issues such as overexploitation hunting ecotourism and the struggle to prevent illegal wildlife trafficking are examined and science s role in policymaking is assessed The conflicting forces behind legislation including institutions interest groups and the

media are analysed with particular focus on the significance of the Endangered Species Act covering over forty five species that have become matters of political debate in sixty seven different countries Case studies and conceptual frameworks provide a clear understanding of the key topics shedding light on this important yet often overlooked area of environmental politics

**Wild Rangelands** Johan T. du Toit, Richard Kock, James Deutsch, 2012-11-06 Rangeland ecosystems which include unimproved grasslands shrublands savannas and semi deserts support half of the world's livestock while also providing habitats for some of the most charismatic of wildlife species This book examines the pressures on rangeland ecosystems worldwide from human land use over hunting and subsistence and commercial farming of livestock and crops Leading experts have pooled their experiences from all continents to cover the ecological sociological political veterinary and economic aspects of rangeland management today This book provides practitioners and students of rangeland management and wildland conservation with a diversity of perspectives on a central question can rangelands be wildlands The first book to examine rangelands from a conservation perspective Emphasizes the balance between the needs of people and livestock and wildlife Written by an international team of experts covering all geographical regions Examines ecological sociological political veterinary and economic aspects of rangeland management and wildland conservation providing a diversity of perspectives not seen before in a single volume

**Large Carnivore Conservation** Susan G. Clark, David J. Mattson, Rebecca Watters, Avery C. Anderson, Douglas Clark, Linaya Workman, D. Scott Slocumbe, William M. Pym, Micheal L. Gibeau, Seth M. Wilson, Gregory A. Neudecker, James J. Jonkel, J. Daniel Oppenheimer, Lauren Richie, David N. Cherney, Christina Milloy, 2014-05-27 Strategies for protecting wolves mountain lions and more by taking the human species into account as well Very valuable Journal of Wildlife Management Drawing on six case studies of wolf grizzly bear and mountain lion conservation in habitats stretching from the Yukon to Arizona Large Carnivore Conservation argues that conserving and coexisting with large carnivores is as much a problem of people and governance of reconciling diverse and sometimes conflicting values perspectives and organizations and of effective decision making in the public sphere as it is a problem of animal ecology and behavior By adopting an integrative approach editors Susan G Clark and Murray B Rutherford seek to examine and understand the interrelated development of conservation science law and policy as well as how these forces play out in courts other public institutions and the field In combining real world examples with discussions of conservation and policy theory Large Carnivore Conservation not only explains how traditional management approaches have failed to meet the needs of all parties but also highlights examples of innovative successful strategies and provides practical recommendations for improving future conservation efforts Building on decades of work this book integrates biological knowledge with human dimensions study and charts a course for coexistence with large carnivores Douglas W Smith Senior Wildlife Biologist Yellowstone National Park

**Psychology and Rural Contexts** Jäder Ferreira Leite, Magda Dimenstein, Candida Dantas, Joao Paulo Macedo, 2022-02-01 This book brings together a selection of theoretical reflections

empirical researches and professional experiences to showcase the increasing production of psychological studies in rural contexts developed in Latin America in recent years Psychology's tradition of science and eminently urban profession has produced a void of reflections and approaches on important actors of the societies that constitute their existence in rural contexts and in relation whether of integration conflicts and contradictions with urban agents But a new generation of psychologists are turning their attention to rural contexts especially in Latin America This volume aims to present a selection of these psychological studies and interventions developed in rural contexts from a psychosocial and interdisciplinary perspective developed together with various social actors who live and work in rural spaces that have an important relationship with land and nature both in terms of the elaboration of their history the production of their subjectivities and identity ties with the territory and the engagement in struggles for the right to land and for public policies that guarantee access to education and health services technical assistance and infrastructure for its working activities The book is divided in five parts each one dedicated to a dimension of psychosocial studies and interventions in rural contexts theoretical approaches mental health and rural populations social movements communities and resistance practices gender relations and subjectivation processes and environment and sustainability Chapters in each axis prioritize reports of experiences and research conducted with participatory approaches producing new perspectives and reflections that contribute to the advancement of knowledge in the field of psychology both regionally and globally

*Conservation and Management of Large Carnivores - Local Insights for Global Challenges* Tasos Hovardas, Stephen Redpath, José Vicente López-Bao, Vincenzo Penteriani, Arie Trouwborst, 2021-06-29

**People and Wildlife, Conflict or Co-existence?** Rosie Woodroffe, Simon Thirgood, Alan Rabinowitz, 2005-08-25 Human wildlife conflict is a major issue in conservation As people encroach into natural habitats and as conservation efforts restore wildlife to areas where they may have been absent for generations contact between people and wild animals is growing Some species even the beautiful and endangered can have serious impacts on human lives and livelihoods Tigers kill people elephants destroy crops and African wild dogs devastate sheep herds left unattended Historically people have responded to these threats by killing wildlife wherever possible and this has led to the endangerment of many species that are difficult neighbours The urgent need to conserve such species however demands coexistence of people and endangered wildlife This book presents a variety of solutions to human wildlife conflicts including novel and traditional farming practices offsetting the costs of wildlife damage through hunting and tourism and the development of local and national policies

*Human-wildlife Conflicts*, 2009

**Conflicts in Conservation** Stephen M. Redpath, R. J. Gutiérrez, Kevin A. Wood, Juliette C. Young, 2015-05-07 Conflicts over the conservation of biodiversity are increasing and are serious obstacles to wildlife conservation efforts worldwide Changing patterns in land use over exploitation pollution climate change and the threat posed by invasive species all challenge the way we currently maintain and protect biodiversity from the local management of single species to the international management of resources

Integrating approaches from different academic disciplines policy makers and practitioners this volume offers a radically new cross disciplinary multi scale approach to deal with conflicts Groundbreaking strategies for conservation are analysed and a large section of the book is devoted to exploring case studies of conflict from around the world Aimed primarily at academics researchers and students from disciplines relating to conservation ecology natural resources management and environmental governance this book will be equally valuable to conservation NGOs and practitioners and the policy community at national and international levels

**People, Parks, and Power** Maria Sapignoli, Robert K. Hitchcock, 2023-11-08 This book presents a critical review of the ethics of conservation related resettlement We examine what has become known as the parks versus people debate also known as the new conservation debate which has pitted indigenous and other local people against nation states and social scientists against ecologists and conservationists for the past several decades Aiming to promote biodiversity conservation and habitat preservation some biologists park planners and conservation organizations have recommended that indigenous and other people should be removed from protected areas Local people for their part have argued that residents of the areas that were turned into protected areas national parks game reserves and monuments had managed them in productive ways for generations and that they should have the right to remain there and to use natural resources as long as they do so sustainably This position is often supported by indigenous rights organizations and social scientists especially anthropologists There are also some conservation oriented NGOs that have policies involving a more human rights oriented approach aimed at poverty alleviation sustainable development and social justice The book discusses biodiversity conservation indigenous peoples those who are ethnic minorities and who are often marginalized politically and protected areas those categories of land set aside by nation states that have various kinds of rules about land use and residence The focus initially is on case studies from protected areas in the United States including Yellowstone National Park Yosemite National Park and Glacier National Park and on national monuments and historical parks where resettlement took place We then consider issues of coercive conservation in southern Africa including Hwange National Park Zimbabwe the Central Kalahari Game Reserve Botswana Etosha National Park and Bwabwata National Park Namibia and Kgalagadi Transfrontier Park South Africa and Botswana All of these cases involved involuntary resettlement at the hands of the governments In the book we consider some of the social impacts of conservation forced resettlement Cfr many of which tend to be negative After that we assess some of the strategies employed by indigenous peoples in their efforts to recover rights of access to protected areas and the cultural and natural resources that they contain Examples are drawn from cases in Asia Africa and South America Conclusions are provided regarding the ethics of conservation related resettlement and some of the best practices that could be followed particularly with regard to indigenous peoples
