Insulin-like Growth

Factors Derek LeRoith,2024-12-20 During the past decade the continued interest in insulin related growth factors has been documented by a plethora of research programs and publications focused on these growth factors Both molecular and cellular biological techniques have improved and enabled investigators to study the properties of the growth factors in depth This volume covers the molecular genetic aspects of the growth factors their binding proteins and receptors as well as those factors affecting their gene transcription and translation In addition aspects of the cellular action of these growth factors through their receptors and how this impacts normal cellular function are discussed The book will provide valuable information for researchers in physiology biology endocrinology and metabolism Ectopeptidases Jürgen

Langner,Siegfried Ansorge,2002-02-28 The idea to compile recent results on the ectoenzymes aminopeptidase N CD13 and dipeptidylpeptidase IV CD26 arose from the great interest given by readers world wide to the two proceedings volumes edited by us in 1997 and 2000 Ansorge and Langner 1997 Langner and Ansorge 2000 These volumes contained the presentations at two symposia held in Magdeburg Germany in 1996 and 1999 under the title Cellular peptidases in immune functions and diseases which was also the name of the Sonderforschungsbereich in Magdeburg sponsored by the Deutsche Forschungsgemeinschaft between 1995 and 2001 Our groups in Magdeburg and Halle during the last two decades have provided results on these two enzymes in cells of the hematopoietic system that justify a review in an edited monograph like the present one see the reviews by Kahne et al 1999 Lendeckel et al 1999 Riemann et al 1999 There are however many other groups in Europe US and Japan which made important contributions to this field and particularly in topics improving the understanding of physiological and pathophysiological roles of APN CD13 and DPIV CD26 Therefore we decided to invite some of them to contribute reviews of their results to this book Having worked for about 40 years in the field of proteolysis for both of us to see the development of activities and knowledge from protein chemistry and enzymology to physiology and pathophysiology and even to therapy is very stimulating and fascinating Of course this development also reflects the dramatic improvement and refinement of methods **Protein & Peptide Letters** ,1994-11 **Regulatory Gut Peptides**

Substances Jens H. Henriksen,2024-12-06 Intended primarily for researchers working with bioactive substances such as hormones neurotransmitters growth factors and connective tissue makers this book discusses the principles of degradation in major groups of bioactive materials with respect to physiology location and regulation Peptidases receptor mediated endocytosis organ extraction and clearance and the degradation of specific proteins peptides amines steroids and

polysaccharoides are featured Pathophysiology and its role in diagnostics and disease are considered throughout the book in addition to updates of recent literature and substantial new information on physiology and pathophysiology of degradation of bioactive material No special mathematical or kinetic background is necessary to read this book because the mathematic and kinetic concepts are facilitated through the presentation of fundamental and more advanced principles Furthermore illustrations and tables are provided to facilitate the understanding of the dynamic aspects of degradation processes

Degradation of Bioactive Substances Physiology and Pathophysiology is the first comprehensive work describing the degradation of bioactive material including information not found in biochemical textbooks on internal metabolism or pharmacokinetic textbooks on drug metabolism

Receptors P. Michael Conn, 2013-10-22 Methods in Neurosciences Volume 11 Receptors Model Systems and Specific Receptors is a compilation of papers that describes techniques and information that are important to the neurosciences This volume discusses preferred receptor techniques molecular techniques and methods to determine receptor subclasses and localization in the ligand design The first paper discusses the steroid receptor found in the central nervous system for steroid hormones that affects strongly the structure and function of both developed and immature nervous systems Another paper describes how a glycoprotein of 79 5 kDa transferrin carries iron in the blood stream for delivery to different tissues after the transferrin has bound with a specific receptor on the surface of the cell This book also explains the binding sites of pituitary adenylate cyclase activating polypeptide in the human brain while one paper analyzes the neurotensin receptors during the primary culture of neurons This volume then also analyzes the structure and function of the fast nerve growth factor receptor particularly how a signal on the outside of a cell is transmitted to the cell s interior This collection is helpful for microbiologists cellular researchers students and professors in the discipline of neurosciences
