Peptide Growth Factors and Their Receptors I Michael B. Sporn, Anita B. Roberts, 2012-12-06 This two volume treatise the collected effort of more than 50 authors represents the first comprehensive survey of the chemistry and biology of the set of molecules known as peptide growth factors Although there have been many symposia on this topic and numerous publications of reviews dealing with selected subsets of growth factors the entire field has never been covered in a single treatise It is essential to do this at the present time as the number of journal articles on peptide growth factors now makes it almost impossible for anyone person to stay informed on this subject by reading the primary literature At the same time it is becoming increasingly apparent that these of universal importance in biology and medicine and that the substances are original classification of these molecules based on the laboratory setting of their discovery as growth factors lymphokines cytokines or colony stimulating factors was quite artifactual they are in fact the basis of a common language for intercellular communication As a set they affect essentially every cell in the body and in this regard they provide the basis to develop a unified science of cell biology germane to all of biomedical research This treatise is divided into four main sections After three introductory chapters its principal focus is the detailed description of each of the major peptide growth factors in 26 individual chapters

Growth Factors, Peptides, and Receptors Terry W. Moody, 2012-12-06 The Twelfth Annual Washington Spring Symposium on Health Sciences attracted over 300 scientists from 20 countries It was held at the Lisner Auditorium of the George Washington University in Washington D C during June 1-5 1992 The theme of the meeting was Growth Factors Peptides and Receptors and speakers emphasized both basic and clinical research in these areas The seven plenary sessions emphasized Peptides Growth Factors Peptide Receptors Growth Factor Receptors Second Messengers Proliferation and Clinical Correlations The chapters in this volume are derived from each of these scientific sessions plus the poster and special sessions The Abraham

White Distinguished Scientist Award was presented to Dr Solomon H Snyder for his numerous contributions to the field of neurochemistry He presented the keynote address Nitric Oxide A Novel Neuronal Messenger Dr Snyder discussed the pathway of nitric oxide NO synthesis by the enzyme NO synthase Released NO may be responsible for the neuronal toxicity associated with NMDA an excitatory amino acid analogue Dr Snyder noted that NO may be the first of a new class of transmitters with carbon monoxide being another candidate The Distinguished Public Service Award was presented to Senator Fritz Hollings in of his leadership and outstanding achievements in the United States Senate recognition and for his legislative support for biomedical research and education In the symposium banquet address Senator Hollings stressed the need for continued support of research to combat serious diseases such as cancer *Insulin, Insulin-like Growth Factors, and Their Receptors in the Central Nervous System* Mohan Raizada, 2012-12-06 Traditionally intercellular communication and the regulation of biological functions of the body have been considered the role of two major and distinct systems the nervous system and the endocrine system The classic nervous system transmitted its signal rapidly by using electrical currents whereas the signals used by the endocrine system were hormones produced by endocrine glands which reached the target tissues via the blood stream During the past few decades it has become apparent that these systems of intercellular communication are not distinct and the signal messenger molecules are not unique to one or the other system Many classic endocrine hormones are found in and act on nervous tissues and evidence exists for their de novo synthesis by neural related tissues An exciting development in this area is the possibility that insulin and insulin like growth factors IGF are not only produced by neural tissues but also exert profound physiological and biochemical effects on these tissues The area of investigation of CNS insulin and IGF has been expanding rapidly and the availability of this book complete with up to date reviews on the subject by leaders in the field allows other scientists to utilize the knowledge in planning and adapting the latest ideas for future experiments In addition the book provides a collection of up to date articles for teachers to be used for the latest instructional material The first section of the book covers general aspects of insulin receptors and insulin action

Trends and Future Perspectives in Peptide and Protein Drug Delivery Vincent Lee, 1995-02-01 First published in 1995 Routledge is an imprint of Taylor Francis an informa company **Anti-Idiotypes, Receptors, and Molecular Mimicry** D. Scott Linthicum, Nadir R. Farid, 2012-12-06 Here is an up to date review of important new methods and results in anti idiotypes receptors and molecular mimicry It begins with a discussion of the theoretical background of the anti idiotypic network its role in the regulation of immune response and the physical characteristics of anti idiotypic antibodies It then goes on to explore many exciting applications in such areas as insulin action thyroid cell function the neurosciences cardiology virology pharmacology and reproduction **Cytokines and Cell Homeostasis in the Gastrointestinal Tract** T. Andus, 2000-11-30 The gastrointestinal tract has a number of unique features Its extensive surface is formed by a single layer of rapidly renewing cells the intestinal epithelial cells These cells are in contact with a number of other cell populations

including the largest part of the immune system and with an excessive luminal antigen load including vast numbers of bacteria Furthermore two more organs namely liver and pancreas are part of the system The rapid renewal of the epithelial layer the interactions of different cell types and the balance between cell proliferation and death have been fascinating subjects of studies in recent years Much has been learned and cytokines have emerged as important mediators for all these interactions and homeostatic systems This book the proceedings of the Falk Symposium 113 on Cytokines and Cell Homeostasis in the Gastrointestinal Tract held in Regensburg Germany 16 18 September 1999 provides a forum for basic scientists and interested clinicians to exchange ideas to discuss concepts and to plan further studies

Molecular Mechanisms In Cellular Growth and Differentiation A.R. Bellve, 2012-12-02 Molecular Mechanisms in Cellular Growth and Differentiation describes the cellular differentiation and development It emphasizes the pattern formation specifically the genesis of spatial relationships among the parts of a vertebrate or invertebrate organism embryonic or adult Organized into five parts this book deals with the major steps leading from growth factor receptor interactions through transduction and modulation mechanisms to proliferative response It also discusses the relation of growth factors and their receptors to oncogenes and to protooncogenes It also elucidates the roles of growth factors and receptors in cell differentiation and development particularly in pattern formation The homeotic systems regulated intracellularly and the two differentiation systems thought to involve sequence specific DNA binding proteins in conjunction with small molecules are also explored
