Peptide Transport and Hydrolysis Katherine Elliott, Maeve O'Connor, 2009-09-16 The Novartis Foundation Series is a popular collection of the proceedings from Novartis Foundation Symposia in which groups of leading scientists from a range of topics across biology chemistry and medicine assembled to present papers and discuss results The Novartis Foundation originally known as the Ciba Foundation is well known to scientists and clinicians around the world *Ciba Foundation Symposium 50 - Peptide Transport and Hydrolysis* Ciba Foundation, Peptide Transport and Hydrolysis Symposium on Peptide Transport and Hydrolysis, **Peptide Transport and Hydrolysis** William Edward Fitzgibbon, 1977 **PEPTIDE TRANSPORT AND HYDROLYSIS- PROCEEDINGS OF A CIBA FOUNDATION SYMPOSIUM.** , **Peptide Transport and Hydrolysis in Rat Small Intestine** , 1994 *Pharmacology of Intestinal Permeation II* , 2012-12-06 The intestine particularly the small bowel represents a large surface in the adult 2 human approximately 200 m through which the body is exposed to its environment A vigorous substrate exchange takes place across this large surface nutrients and xenobiotics are absorbed from the lumen into the bloodstream or the lymph and simultaneously the same types of substrate pass back into the lumen The luminal surface of the intestine is lined with a leaky epithelium thus the passage of the substrates in either direction proceeds via both transcellular and intercellular routes Simple and carrier mediated diffusion active transport pinocytosis phagocytosis and persorption are all involved in this passage across the intestinal wall The term intestinal permeation refers to the process of passage of various substances across the gut wall either from the lumen into the blood or lymph or in the opposite direction Permeability is the condition of the gut which governs the rate of this complex two way passage The pharmacologists interest in the problem of intestinal permeation is twofold on the one hand this process determines the bioavailability of drugs and contributes significantly to the pharmacokinetics and toxicokinetics of xenobiotics on the other hand the pharmacodynamic effects of many drugs are manifested in a significant alteration of the physiological process of intestinal permeation **Physiology of the Gastrointestinal Tract** Kim E. Barrett, Faye K. Ghishan, Juanita L. Merchant, Hamid M. Said, Jackie D. Wood, 2006-05-10 FROM THE PREFACE The original purpose of the First Edition of Physiology of the Gastrointestinal Tract to collect in one set of volumes the most current and comprehensive knowledge in our field was also the driving force for the Fourth Edition The explosion of information at the cellular level made possible in part by the continued emergence of powerful molecular and cellular techniques has resulted in a greater degree of revision than that of any other edition The first section now titled Basic Cell Physiology and Growth of the GI Tract contains numerous new chapters on topics such as transcriptional regulation signaling networks in development apoptosis and mechanisms in malignancies Most of the chapters in this section were edited by Juanita L Merchant Section II has been renamed Neural Gastroenterology and Motility and has been expanded from seven chapters with rather classic titles to more than twenty chapters encompassing not only the movement of the various parts of the digestive tract but also cell physiology

neural regulation stress and the regulation of food intake Almost all of the chapters were recruited and edited by Jackie D Wood The third section is entirely new and contains chapters on Immunology and Inflammation which were edited by Kim E Barrett The fourth section on the Physiology of Secretion consists of chapters with familiar titles but with completely updated information to reflect the advances in our understanding of the cellular processes involved in secretion The last section on Digestion and Absorption contains new chapters on the intestinal barrier protein sorting and ion channels along with those focusing on the uptake of specific nutrients These chapters were recruited and edited by Hamid M Said and Fayez K Ghishan Collected in one set the most current and comprehensive coverage of gastrointestinal physiology Information presented in a style that is both readable and understandable Valuable to the specialized researcher the clinical gastroenterologist the teacher and the student Features an entirely new section on Immunology and Inflammation Each section edited by the preeminent scientist in the field

Membrane Transporters and Channels as Targets for Drugs Graça Soveral, Cesare Indiveri, 2020-01-03 Transporters and channels are membrane proteins that mediate the traffic of metabolites water and ions across biological membranes Membrane transport proteins are crucial to maintain homeostasis and assure cell survival upon intracellular or environmental stress A failure of any of these transport systems may have dramatic consequences for cell function There is increasing evidence that membrane transport proteins play important functions in healthy conditions and that their absence or dysfunction may cause diseases In recent years much attention has been paid to diseases resulting from defective transporters carrier diseases and ion channels channelopathies Very interestingly altered expression of transporters has been described in several human pathologies On this basis many transport proteins are well acknowledged targets for drugs Many others are involved in drug delivery and disposition and or are considered potential targets Others are off targets for drugs and then are responsible for side effects Thus membrane protein drug discovery is now an emerging field where the search for physiological mechanisms of regulation and for chemical compounds as modulators of transport activity present new opportunities for drug development and for new therapies This Research Topic addresses the latest research advances in membrane transport proteins stimulating future research on these important protein families

Peptide and Protein Drug Delivery Vincent Lee, 2024-11-01 This reference text covers fundamentals of peptide and protein drug delivery including such considerations as synthesis physical chemistry and biochemistry analysis proteolytic and transport constraints pharmacokinetics and pharmacodynamics bioavailability from routes of administration detail

Organization of Prokaryotic Cell Membranes Bijan K. Ghosh, 2018-01-18 These volumes include a collection of authoritative articles covering the most active areas of prokaryotic biomembrane investigations and will provide a great service not only to those interested in the field but also to microbiologists in general These monographs will also serve to focus attention on prokaryotic membranes that are so often ignored by eukaryotic membraneologists and proved an excellent reference source for many years to come

Pharmacology of Intestinal Permeation I ,2012-12-06 The intestine particularly the small bowel represents a large surface in the adult 2 human approximately 200m through which the body is exposed to its environment A vigorous substrate exchange takes place across this large surface nutrients and xenobiotics are absorbed from the lumen into the bloodstream or the lymph and simultaneously the same types of substrate pass back into the lumen The luminal surface of the intestine is lined with a leaky epithelium thus the passage of the substrates in either direction proceeds via both transcellular and intercellular routes Simple and carrier mediated diffusion active transport pinocytosis phagocytosis and persorption are all involved in this passage across the intestinal wall The term intestinal permeation refers to the process of passage of various substances across the gut wall either from the lumen into the blood or lymph or in the opposite direction Permeability is the condition of the gut which governs the rate of this complex two way passage The pharmacologist s interest in the problem of intestinal permeation is twofold on the one hand this process determines thebioavailability of drugs and contributes

Delivery Systems for Peptide Drugs S.S. Davis, Lisbeth Illum, E. Tomlinson, 2013-11-11 Recent years have seen enormous advances in the field of protein and peptide engineering and a greater understanding in the way in which biological response modifiers function in the body It is now possible through the use of recombinant DNA techniques or by solid phase protein synthesis to produce significant quantities of a wide variety of regulatory agents that are therapeutically applicable The list of these response modifiers expands almost daily to include interferons macrophage activation factors neuropeptides and agents that may have potential in cardiovascular disease inflammation contraception etc Prospects to use some of these materials in medicine have reached the stage where products have either been approved by regulatory authorities or are the subject of applications as investigatory drugs or as new therapeutic agents In some uses the pertinent agent will be administered on an acute basis in the form of a simple injection as for example the use of a tissue plasminogen activator for the treatment of coronary infarct In other cases regulatory proteins and peptides are indicated for chronic therapy and here they will need to be administered by an appropriate delivery system Unfortunately the research on delivery systems for peptides and proteins has not kept pace with the rapid progress in

biotechnology and consequently there are presently few systems that are entirely appropriate for the administration of macromolecular drugs according to complex dosage regimens eg intermittent and pulsed therapy Furthermore essential pharmacokinetic and pharmacodynamic data may be missing
