The Perception of People Perry R. Hinton, 2015-09-16 What are other people like? How do we decide if someone is friendly, honest, or clever? What assumptions do we develop about them, and what explanations do we give for their behaviour? *The Perception of People* examines key topics in psychology to explore how we make sense of other people and ourselves. Do our decisions result from careful consideration and a desire to produce an accurate perception? Or do we jump to conclusions in our judgements and rely on expectations and stereotypes? To answer these questions, the book examines models of person perception and provides an up-to-date and detailed account of the central psychological research in this area, focusing in particular on the social cognitive approach. It also considers and reflects on the involvement of culture in cognition and includes coverage of relevant research in culture and language that influence the way we think and speak about others. As well as providing a valuable text in social psychology, *The Perception of People* also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology, anthropology, sociology, philosophy, and social history. Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it. Ideal reading for students of social psychology, this engaging text will also be useful in subject areas such as communication studies and media studies where the perception of people is highly relevant.

Visual Perception and Cognition in infancy Carl Granrud, Carl E. Granrud, 2013-02-01 The chapters in this book are based on papers presented at the 23rd Carnegie Mellon Symposia on Cognition. At this exciting event, speakers after speakers presented new discoveries about infants' visual perception in areas ranging from sensory processes to visual cognition. The field continues to make significant progress in understanding the infant's perceptual world. Several advances have come from the development of new methods for exploring infant perception and cognition that have brought new empirical findings. Advances have also been made in understanding the mechanisms underlying perceptual development. Outstanding examples of this ongoing progress can be seen in the chapters of this volume.
