Perception And Cognition:

The Perception and Cognition of Visual Space Paul Linton, 2017-08-28 This book explores a central question in the study of depth perception: does the visual system rely upon objective knowledge and subjective meaning to specify visual depth? Linton advances an alternative interpretation to the generally accepted affirmative answer according to which many of the apparent contributions of knowledge and meaning to depth perception are better understood as contributions to our post-perceptual cognition of depth. In order to defend this position, a new account of visual cognition is required, as well as a better understanding of the optical and physiological cues to depth. This book will appeal to students and researchers in psychology, vision science, and philosophy, as well as technologists and content creators working in virtual and augmented reality.

Perception and Cognition at Century's End Julian Hochberg, 1998-09-22 Perception and Cognition at Century's End contains cognitive psychology surveys that are up to date and historically based, as well as references to the development of cognitive psychology over the past century. The book can serve as a central or specialized text for a range of psychology courses. Written by prominent active researchers in the field, it presents broad coverage of perception and cognition. It considers perception and cognition in the context of the thought of the past half century. It contains extensive references, an excellent resource.

Perception, Cognition, and Development T. J. Tighe, B. E. Shepp, 2019-01-22 This volume is based on a conference held at Dartmouth College's Minerva Conference Center in Holderness, New Hampshire, June 4-7, 1981. The conference brought together a number of investigators whose separate lines of inquiry bear in significant ways on the relationships among perception, cognition, and development. The purpose was to consider interactions among these basic processes not only as a critical facet of the research programs of the participants but also as a central conceptual problem for current theoretical psychology. First published in 1983, Routledge is an imprint of Taylor & Francis, an informa company.

Multidimensional Models of Perception and Cognition F. Gregory Ashby, 2014-02-04 The mental representations of perceptual and cognitive stimuli vary on many dimensions. In addition, because of quantal fluctuations in the stimulus, spontaneous neural activity, and fluctuations in arousal and attentiveness, mental events are characterized by an inherent variability. During the last several years, a number of models and theories have been developed that explicitly assume the appropriate mental representation is both multidimensional and probabilistic. This new approach has the potential to revolutionize the study of perception and cognition in the same way that signal detection theory revolutionized the study of psychophysics. This unique volume is the first to critically survey this important new area of research.

Perception and Cognition Gary Carl Hatfield, 2009 How do we see? This question has fascinated and perplexed philosophers and scientists for millennia. In visual perception, mind and world meet when light reflected from objects enters the eyes and stimulates the nerves leading to activity in the brain near the back of the head. This neural activity yields conscious experiences of a world in three dimensions, clothed in colors and immediately recognized as, say, ground, sky, grass, trees, and friends. The visual brain

also produces nonconscious representations that interact with other brain systems for perception and cognition and that help to regulate our visually guided actions But how does all of this really work The answers concern the physiology psychology and philosophy of visual perception and cognition Gary Hatfield s essays address fundamental questions concerning in Part I the psychological processes underlying spatial perception and perception of objects in Part II psychological theories and metaphysical controversies about color perception and qualia and in Part III the history and philosophy of theories of vision including methodological controversies surrounding introspection and involving the relations between psychology and the fields of neuroscience and cognitive science An introductory chapter provides a unified overview an extensive reference list rounds out the volume **Perception, Cognition and Aesthetics** Dena Shottenkirk, Manuel Curado, Steven S.

Gouveia, 2019-04-29 This volume addresses key questions related to how content in thought is derived from perceptual experience It includes chapters that focus on single issues on perception and cognition as well as others that relate these issues to an important social construct that involves both perceptual experience and cognitive activities aesthetics While the volume includes many diverse views several prominent themes unite the individual essays a challenge to the notion of the discreet and non temporal unit of perception a challenge to the traditional divide between perception and cognition and a challenge to the traditional divide between unconscious and conscious intentionality Additionally the chapters discuss the content of perceptual experience the value of traditional notions of content disjunctivism adverbialism and phenomenal experience The final section of essays dealing with perception and cognition in aesthetics features work in experimental aesthetics and unique perspectives from artists and gallerists working outside of philosophy Perception Cognition and Aesthetics is a timely volume that offers a range of unique perspectives on debates in philosophy of mind surrounding perception and cognition It will also appeal to scholars working in aesthetics and art theory who are interested in the ways these debates influence our understanding of art *Spatial Biases in Perception and Cognition* Timothy L.

Hubbard, 2018-08-23 Numerous spatial biases influence navigation interactions and preferences in our environment This volume considers their influences on perception and memory *The Development of Perception, Cognition and Language* Paul van Geert, 2017-03-31 Originally published in 1983 the aim of this book was to discuss some fundamental problems of cognitive developmental psychology at the time The theme which underlies the discussion is that scientific knowledge of the cognitive characteristics of other people starts from the cognitive instruments that we psychologist employ viz our theories models assumptions methods of enquiry etc Thus our scientific cognitive equipment not only provides the format in which cognition in other people is expressed it also exemplifies in some abstract sense this cognition The first part of the book deals with the concept of development in relation to the structure of developmental theories It is argued that theories originate from implicit conceptual analyses of implicit final state definitions Starting from this specific view on the nature of developmental theories the second part of the book discusses perception and perceptual development Perception and

Cognition: Interactions in the Aging Brain Harriet A. Allen, Katherine L. Roberts, 2016-09-13 Healthy ageing can lead to declines in both perceptual and cognitive functions Impaired perception such as that resulting from hearing loss or reduced visual or tactile resolution increases demands on higher level cognitive functions to cope or compensate It is possible for example to use focused attention to overcome perceptual limitations Unfortunately cognitive functions also decline in old age This can mean that perceptual impairments are exacerbated by cognitive decline and vice versa but also means that interventions aimed at one type of decline can lead to improvements in the other Just as improved cognition can ameliorate perceptual deficits improving the stimulus can help offset cognitive deficits For example making directions and routes easy to follow can help compensate for declines in navigation abilities In this Topic we bring together papers from both auditory and visual researchers that address the interaction between perception and cognition in the ageing brain Many of the studies demonstrate that a broadening of representations or increased reliance on gist underlie perceptual and cognitive age related declines There is also clear evidence that impaired perception is associated with poor cognition although encouragingly it can also be seen that good perception is associated with better cognition Compensatory cognitive strategies were less successful in improving perception than might be expected We also present papers which highlight important methodological considerations that are required when studying the older brain

Perception And Cognition Of Music

Irene Deliege, John A. Sloboda, 2004-08-02 This text comprises of reviews of work relating to music and mind It presents a range of approaches from the psychological through the computational to the musicological The reviews were selected from papers submitted at the Third International Conference on Music Perception and Cognition Liege 1994 to illustrate the wide range of perspectives now being adopted in studying how humans make and respond to music The book is divided into five sections The first part illustrates the role of analysis and ethnomusicology in understanding cultural determinants of musical behaviour The second part charts what is known about acquisition of musical competence from pre birth through to the expert performer The evidence accumulated about specific areas of the brain which control musical thinking and behaviour is examined in Part Three The fourth part examines how neurological behavioural and artificial intelligence approaches are converging to shed light on processes in auditory perception Finally Part Five highlights the important developments in how we conceptualize the way in which musical structures are represented in the mind

Cognitive Penetrability of Perception Athanassios Raftopoulos, 2005 The issue of the cognitive impenetrability or penetrability of perception lay dormant for a long period of time Though philosophers reacted to the relativism implied by the work of Hanson Kuhn and Feyerabend they concentrated their efforts in dealing with the danger of the incommensurability of theories They tried to show by philosophical and detailed historical analysis that scientists within different paradigms do communicate with each other and put their respective theories to the empirical test Curiously enough the same philosophers did not seek to examine the very foundation of the relativistic trend namely the thesis that perception is cognitively penetrable and theory laden In the last decade there has been a keen interest in studying the cognition perception boundary However the discussion focused mainly on the grounding of conceptual content on perception and on the embodiment of cognition The repercussions of these issues for the problem of the cognitive effects on perception were largely ignored The chapters in this book address directly the issue of the cognitive penetrability of perception The volume consists of eleven chapters each one addressing the issue from a different perspective Eight of the chapters were written by philosophers and cognitive scientists and three by psychologists and neuropsychologists These differences notwithstanding the chapters share many common themes The role of attention in perception the contribution of action to perception the relation between perception and scientific data the examination of the content of perception and its nature and the detailed examination of the ways background knowledge affects perception are among these themes Most chapters combine philosophical analysis with psychological and or neuropsychological evidence which shows that there is consensus as to the kind of approaches that are currently deemed necessary for an adequate examination of the problem **Grounding Cognition** Diane Pecher, Rolf A.

Zwaan,2005-01-10 One of the key questions in cognitive psychology is how people represent knowledge about concepts such as football or love Some researchers have proposed that concepts are represented in human memory by the sensorimotor systems that underlie interaction with the outside world These theories represent developments in cognitive science to view cognition no longer in terms of abstract information processing but in terms of perception and action In other words cognition is grounded in embodied experiences Studies show that sensory perception and motor actions support understanding of words and object concepts Moreover even understanding of abstract and emotion concepts can be shown to rely on more concrete embodied experiences Finally language itself can be shown to be grounded in sensorimotor processes This book brings together theoretical arguments and empirical evidence from several key researchers in this field to support this framework

Cognition and Perception Athanassios Raftopoulos,2009 An argument that there are perceptual mechanisms that retrieve information in cognitively and conceptually unmediated ways and that this sheds light on various philosophical issues

Cognitive Penetrability and the Epistemic Role of Perception Athanassios Raftopoulos,2019-02-07 This book is about the interweaving between cognitive penetrability and the epistemic role of the two stages of perception namely early and late vision in justifying perceptual beliefs It examines the impact of the epistemic role of perception in defining cognitive penetrability and the relation between the epistemic role of perceptual stages and the kinds direct or indirect of cognitive effects on perceptual processing The book presents the argument that early vision is cognitively impenetrable because neither is it affected directly by cognition nor does cognition affect its epistemic role It also argues that late vision even though it is cognitively penetrated and thus affected by concepts is still a perceptual state that does not involve any discursive inferences and does not belong to the space of reasons Finally an account is given as to how cognitive states with symbolic content could affect perceptual states with iconic analog content during late vision
