Quantitative Techniques In Geography An Introduction First Edition:

An Introduction to Statistical Problem Solving in Geography J. Chapman McGrew, Jr., Charles B. Monroe, 2009-04-22

Written for undergraduate geography majors and entry level graduate students with limited backgrounds in statistical analysis and methods McGrew and Monroe provide a comprehensive and understandable introduction to statistical methods in a problem solving framework Engaging examples and problems are drawn from a variety of topical areas in both human and physical geography and are fully integrated into the text Without compromising statistical rigor or oversimplifying the authors stress the importance of written narratives that explain each statistical technique After introducing basic statistical concepts and terminology the authors focus on nonspatial and spatial descriptive statistics They transition to inferential problem solving including probability sampling and estimation before delving deeper into inferential statistics for geographic problem solving The final chapters examine the related techniques of correlation and regression A list of major goals and objectives is included at the end of each chapter allowing students to monitor their own progress and mastery of geographic statistical materials An epilogue offering over 150 geographic situations gives students a chance to figure out which statistical technique should be used for a particular situation

Quantitative Techniques in Geography Robert Hammond, Patrick McCullagh, 1974 *The Geographical Magazine* Michael Huxley, 1978 Vols for 19 include a separate section called GM news and reviews Statistical Methods and the Geographer S Gregory, 2014-09-25 First published in 1978 For the non mathematician however even the simpler introductory books on statistics often raise considerable problems In this second edition First some attention has been given to the problem of the transformation of data in order to reinforce the appreciation of the need for normally distributed data for the use of so many techniques Secondly the use of probability paper at least in simple terms has been introduced to illustrate the ways in which the labour of probability assessments can be circumvented Thirdly radical changes have been made plus considerable expansion added to the theme of non parametric testing to provide a more systematic approach to what is a most important group of possible techniques for geographers Fourthly change and expansion are also reflected in the sections on correlation and regression including some simple consideration of curvilinear relationships and the presentation of computational techniques more geared to the use of desk calculators rather than long hand methods Finally the bibliography has also been expanded to incorporate a wider range of books on techniques and a selection of research papers using such techniques in a geographical or near geographical context

Instant encyclopaedia of geography Shatrughna P. Sinha, 1993

Perspectives on Spatial Data Analysis Luc Anselin, Sergio J. Rey, 2009-12-24 Spatial data analysis has seen explosive growth in recent years Both in mainstream statistics and econometrics as well as in many applied elds the attention to space location and interaction has

become an important feature of scholarly work. The methods developed to deal with problems of spatial pattern recognition, spatial autocorrelation and spatial heterogeneity have seen greatly increased adoption in part due to the availability of user friendly desktop software. Through his theoretical and applied work, Arthur Getis has been a major contributing figure in this development. In this volume we take both a retrospective and a prospective view of the field. We use the occasion of the retirement and move to emeritus status of Arthur Getis to highlight the contributions of his work. In addition we aim to place it into perspective in light of the current state of the art and future directions in spatial data analysis. To this end we elected to combine reprints of selected classic contributions by Getis with chapters written by key spatial scientists. These scholars were specifically invited to react to the earlier work by Getis with an eye toward assessing its impact, tracing out the evolution of related research and to reflect on the future broadening of spatial analysis. The organization of the book follows four main themes in Getis' contributions: Spatial analysis, Pattern analysis, Local statistics, Applications. For each of these themes the chapters provide a historical perspective on early methodological developments and theoretical insights, assessments of these contributions in light of the current state of the art as well as descriptions of new techniques and applications.

The Map Reader Martin Dodge, Rob Kitchin, Chris Perkins, 2011-05-09 WINNER OF THE CANTEMIR PRIZE 2012 awarded by the Berendel Foundation. The Map Reader brings together for the first time classic and hard to find articles on mapping. This book provides a wide ranging and coherent edited compendium of key scholarly writing about the changing nature of cartography over the last half century. The editorial selection of fifty four theoretical and thought provoking texts demonstrates how cartography works as a powerful representational form and explores how different mapping practices have been conceptualised in particular scholarly contexts. Themes covered include paradigms, politics, people, aesthetics and technology. Original interpretative essays set the literature into intellectual context within these themes. Excerpts are drawn from leading scholars and researchers in a range of cognate fields including Cartography, Geography, Anthropology, Architecture, Engineering, Computer Science and Graphic Design. The Map Reader provides a new, unique, single source reference to the essential literature in the cartographic field: more than fifty specially edited excerpts from key classic articles and monographs, critical introductions by experienced experts in the field, focused coverage of key mapping practices, techniques and ideas, a valuable resource suited to a broad spectrum of researchers and students working in cartography and GIScience, geography, the social sciences, media studies and visual arts, full page colour illustrations of significant maps as provocative visual 'think pieces', fully indexed, clearly structured and accessible ways into a fast changing field of cartographic research.
