Biologically Inspired Cognitive Architectures 2012 Antonio Chella, Roberto Pirrone, Rosario Sorbello, Kamilla Rún Jóhannsdóttir, 2012-09-29 The challenge of creating a real life computational equivalent of the human mind requires that we better understand at a computational level how natural intelligent systems develop their cognitive and learning functions In recent years biologically inspired cognitive architectures have emerged as a powerful new approach toward gaining this kind of understanding here biologically inspired is understood broadly as brain mind inspired Still despite impressive successes and growing interest in BICA wide gaps separate different approaches from each other and from solutions found in biology Modern scientific societies pursue related yet separate goals while the mission of the BICA Society consists in the integration of many efforts in addressing the above challenge Therefore the BICA Society shall bring together researchers from disjointed fields and communities who devote their efforts to solving the same challenge despite that they may speak different languages This will be achieved by promoting and facilitating the transdisciplinary study of cognitive architectures and in the long term perspective creating one unifying widespread framework for the human level cognitive architectures and their implementations This book is a proceedings of the Third Annual Meeting of the BICA Society which was hold in Palermo Italy from October 31 to November 2 2012 The book describes recent advances and new challenges around the theme of understanding how to create general purpose humanlike artificial intelligence using inspirations from studies of the brain and the mind Small Robots Thomas Heasman-Hunt, 2020-02-20 Whether you need a robotic companion to

Quinn,Holly Yanacek,2021-11-08 Sentient animals machines and robots abound in German literature and culture but there has been surprisingly limited scholarship on non human life forms in German studies This volume extends interdisciplinary research in emotion studies to examine non humans and the affective relationships between humans and non humans in modern German cultural history In recent years fascination with emotions developments in robotics and the burgeoning of animal studies in and beyond the academy have given rise to questions about the nature of humanity Using sources from the life sciences literature visual art poetry philosophy and photography this collection interrogates not animal or machine emotions per se but rather uses animals and machines as lenses through which to investigate human emotions and the affective entanglements between humans and non humans The COVID 19 pandemic made us more keenly aware of the importance of both animals and new technologies in our daily lives and this volume ultimately sheds light on the centrality of non humans in the human emotional world and the possibilities that relationships with non humans offer for enriching that world Watch our talk with the editors Erika Quinn and Holly Yanacek here https://youtu.be/RBMwXah_Om8
