Practical Guide to Infrared Microspectroscopy Howard J. Humecki, 1995-01-23 This work represents a sound introduction to the fundamental principles of infrared microspectroscopy IMS It describes how IMS is used to solve specific microanalytical problems in a variety of disciplines including forensic analysis art conservation and geological pharmaceutical and electronics research The book discusses when and how to use **Long-wave Optics** George William Chantry, 1984 Modern Techniques in Applied Molecular Spectroscopy Francis M. Mirabella, 1998-04-06 A complete guide to choosing and using the best analytical technique for the job at hand Today's new generation of spectroscopic instrumentation allows for more accurate and varied measurements than ever before At the same time increasingly powerful user friendly PC hardware and software make running those instruments relative child's play However although they may have solved many of the problems traditionally associated with conducting molecular spectroscopic analyses these refinements tend to obscure inherent technical challenges which if not taken into consideration can seriously undermine a research initiative Modern Techniques in Applied Molecular Spectroscopy gives scientists and technicians the knowledge they need to address those challenges and to make optimal selection and use of contemporary molecular spectroscopic techniques and technologies While editor Francis Mirabella and contributors provide ample background information about how and why individual techniques work they concentrate on practical considerations of crucial concern to researchers working in industry For each technique covered they provide expert guidance on method selection sample preparation troubleshooting data handling and analysis and more Adhering principally to mid IR molecular spectroscopic techniques they clearly describe the guiding principles behind characteristics of and suitable applications for transmission spectroscopy reflectance spectroscopies photoacoustic spectroscopy infrared and Raman microspectroscopy fiber optic techniques and emission spectroscopy Modern Techniques in Applied Molecular Spectroscopy is an indispensable working resource for analytical scientists and technicians working in an array of industries **Trends in Counterfeit Drugs** Kelly M. Elkins, 2023-07-06 Counterfeit drugs continue to infiltrate the drug market in the United States causing illness and death This book addresses this issue and examines the recent trends in drug counterfeiting over the past 5 10 years The text shows perspectives from crime lab and toxicology lab personnel and academic researchers and includes topics such as a history of cases and issues with counterfeit drugs trends observed in forensic labs instrumental methods and approaches used in detecting counterfeit medicines and policy approaches for controlling counterfeit drugs There is a focus on ways to reduce counterfeit drugs in the market to help improve the health and safety of people all over the world Features Focuses on recent 5 10 year trends in counterfeit drugs and analysis Shows perspectives from crime lab and toxicology lab personnel and academic researchers Focuses on drugs seized by law enforcement and approaches to reducing counterfeit medicine in the

Observational Astrophysics Pierre Lena, 2013-03-09 For the last twenty years astronomy has been developing dramatically Until the nineteen fifties telescopes spectrometers and photographic plates constituted a relatively simple set of tools which had been refined to a high degree of perfection by the joint efforts of physicists and astronomers Indeed these tools helped at the birth of modern astrophysics the discovery of the expansion of the Universe Then came radioastronomy and the advent of electronics the last thirty years have seen the application to astrophysics of a wealth of new experimental techniques based on the most advanced fields of physics and a constant interchange of ideas between physicists and astronomers Last but not least modern computers have sharply reduced the burden of dealing with the information painfully extracted from the skies whether from ever scarce photons or from the gigantic data flows provided by satellites and large telescopes The aim of this book is not to give an extensive overview of all the techniques currently in use in astronomy nor to provide detailed instructions for preparing or carrying out an astronomical project Its purpose is methodological photons are still the main carriers of information between celestial sources and the observer How we are to collect sample measure and store this information is the unifying theme of the book Rather than the diversity of techniques appropriate for each wavelength range we emphasize the physical and mathematical bases which are common to all wavelength regimes

Nano-Optics: Principles Enabling Basic Research and Applications Baldassare Di Bartolo, John Collins, Luciano Silvestri, 2017-02-15 This book provides a comprehensive overview of nano optics including basic theory experiment and applications particularly in nanofabrication and optical characterization The contributions clearly demonstrate how advances in nano optics and photonics have stimulated progress in nanoscience and fabrication and vice versa Their expert authors address topics such as three dimensional optical lithography and microscopy beyond the Abbe diffraction limit optical diagnostics and sensing optical data and telecommunications energy efficient lighting and efficient solar energy conversion Nano optics emerges as a key enabling technology of the 21st century This work will appeal to a wide readership from physics through chemistry to biology and engineering The contributions that appear in this volume were presented at a NATO Advanced Study Institute held in Erice 4 19 July 2015 Re Ch 73 Structure and Luminescence Properties of Nanofluorapatite Activated with Eu³⁺ Ions Synthesized by Hydrothermal Method pp 567 569 The authors would like to acknowledge the National Science Centre NSC for financial support within the Project Preparation and characterization of nanoapatites doped with rare earth ions and their biocomposites UMO 2012 05 E ST5 03904 Photonics Spectra ,1984-07
