

The book cover features a high-contrast aerial photograph. The top half is dominated by a dark, almost black, sky or water surface. Below this, a wide, light-colored river or body of water flows horizontally across the frame. In the center, a cluster of dark, dense trees stands out against the lighter background. The bottom half of the cover shows a continuation of the river or a similar light-colored surface. The overall composition is minimalist and evocative.

Look At The Land Aerial Reflections On America:

Look at the Land Alex S. MacLean, Bill McKibben, 1993 Photographer and aviator MacLean has spent 20 years traveling the length and breadth of America by air With one hand navigating his plane and the other steadying his camera he has captured stunning views of the continent recording in spectacular images what can only be seen from above 125 color photos

Taking Measures Across the American Landscape James Corner, James M. Corner, Alex S. MacLean, 1996-01-01 Photographs and essays express the way the American landscape has been forged by various cultures in the past and what the possibilities are for its future design Jacket *Aereality* William Fox, 2009-05-01 William Fox's writing for the last several years has been focused on how we construct aerial views either physically by flying or in our imaginations In *Aereality* he flies over earthworks in Nevada and Utah soars through the world's largest open pit mine and surveys Los Angeles circumnavigating large swaths of true American urban sprawl On the East Coast he examines the elevated art of the Hudson River Valley and New York City And finally in Australia Fox examines the history and current practice of both Euro Australian and Aboriginal aerial views and searches for the cognitive roots of our aerial imagination Accompanying Fox throughout his travels is a rolling cast of enlightened fliers geographers museum curators landscape photographers anthropologists and artists He traverses the sky in prop planes helicopters and hot air balloons all with the ultimate goal of knowing and experiencing the earth from the air Photography and Flight Denis Cosgrove, William L. Fox, 2010-04-01 Used for everything from geographic evaluation to secret spy missions aerial photography has a rich and storied history ably recounted here in *Photography and Flight* Aerial photography is marked by its dependency on technological developments in both photography and aerospace and the authors chart the history of this photography as it tracked the evolution of these technologies Beginning with early images taken from hot air balloons fixed platforms and subsequent handheld camera technology Denis Cosgrove and William Fox then explain how military reconnaissance and governmental projects were instrumental in catalyzing these and other innovations in the field They examine pivotal historical moments in which aerial photography began to establish itself as essential tool such as in World War II military strategies high altitude photography taken from postwar rockets and aircraft and the use of aerial photography during the cold war and the Cuban Missile Crisis The book also explores the advancement of geographic scholarship through aerial photography ranging from military excursions into Antarctica to the images of the curvature of the earth taken during the Apollo space missions While digital technology and remote sensing have changed the landscape of photography *Photography and Flight* argues that they have not diminished the significance of aerial photography in providing images of the earth Rather new technologies and resulting innovations such as Google Earth have enabled the mass democratization of access to such information *Photography and Flight* ultimately reveals how the camera lens from far away continues to unearth telling details about the land and those who live upon it E40° Jack Williams, 2006 The Appalachian mountain chain once contained the highest and most dramatic

mountains on earth Worn down over time these mountains still hold some of the most diverse climactic zones and singular geological formations in existence In *East 40 Degrees An Interpretive Atlas* Jack Williams examines a succession of beautiful but little known towns along this cordillera a term descended from the Latin *chorda* meaning braided rope revealing in their layers of history and geography how both their diverse cultural and social circumstances and their geological history were instrumental in forming each town's distinctive character Referring to the spatial orientation of the Appalachian mountain chain the east 40 degrees of the title runs from Alabama through fifteen states to the coast of Maine Each town Williams examines sits within the folds of these mountains or beside a river nourished in their moist uplands Beginning his record with the continental collisions that shaped each town's history more than 300 million years ago Williams allows us to see the tenuous web of connections between ourselves and the natural processes that shape this earth Featuring a wealth of beautiful and significant illustrations and maps this unique work brings into focus the critical issues of environmental and cultural sustainability confronting us today Elegant poetic and erudite *East 40 Degrees* will appeal to architects and landscape architects planners environmental historians ecologists geographers and anyone interested in the history and origins of our modern landscapes and towns Publication of this volume was assisted by a grant from Furthermore a program of the J M Kaplan Fund

American Photo - ND ,1993-09 Impact ,2020-11-23 The rise in sea level is a visible and remorseless indicator of global warming the consequences of which can be experienced worldwide in contrast to other effects of climate change that are not yet noticeable at a larger scale The book illustrates in an impressive way the ecological commercial and social impact associated with the rise in sea levels taking the examples of the American East Coast and the Gulf of Mexico the author has documented this region from his Cessna between 2005 and 2018 using large format aerial photography The pictures illustrate the different conditions of the areas documented at different times of the year before and after major weather events and thereby provide evidence of how dramatically the geography and landscape are altered due to climate change

Harvard Magazine ,1993 Architecture Minnesota ,1994 **The New York Times Book Review** ,1993-10 Presents extended reviews of noteworthy books short reviews essays and articles on topics and trends in publishing literature culture and the arts Includes lists of best sellers hardcover and paperback

Air & Space Smithsonian ,1998 American Studies International ,2001 *Decker's Patterns of Exposition 15* Robert A. Schwegler,1997 *Decker's Patterns of Exposition* is a modern classic an accessible collection of quality essays which aptly illustrate the rhetorical modes and reflect the diversity of our culture and the changes and challenges of our times Practical concise writing apparatus includes chapter openers that introduce each rhetorical mode An emphasis on critical reading and writing is demonstrated through the *Ways of Writing* section and an all new section *Becoming a Critical Reader* Within chapters some essays have been grouped into thematic clusters on provocative topics to show how writers use multiple patterns to address the same theme

Elle ,1993 *Landscape Architecture* ,2004 Library Journal ,1993-07 **The Library Journal** ,1993 Includes

beginning Sept 15 1954 and on the 15th of each month Sept May a special section School library journal ISSN 0000 0035 called Junior libraries 1954 May 1961 Also issued separately **American Photo** ,1993 **Over** Alex MacLean,2008-10 A collection of 250 full color aerial photographs of the American landscape captures the complex interrelationship between the natural and constructed environments the impact of the American lifestyle on the environment and the consequences of both natural processes and human intervention **Dictionary of Today's Landscape Designers** Pierluigi Nicolini,Francesco Repishti,2003 The aim of the book is to illustrate the different ways of understanding landscape creating a dictionary that can convey not just the scope of the designing processes and their related actors but to provide a first key for interpreting the various approaches to this discipline that has given rise to an entirely new dimension in designing the cityscape turning the open space of the city into a space for art and sculpture for garden and architecture and into a new field for cultural activity It documents the surprising extent of the planning experience and profiles world renowned architects engineers landscape architects artists and photographers It also provides the reader with a key interpretation of the different approaches to an experience that has introduced a new dimension in the physical transformation of our environment The dictionary features leading figures from the international scene including Tadao Ando Emilio Ambasz Daniel Buren Tony Cragg Walter de Maria Michael Heizer Nancy Holt Toyo Ito Anish Kapoor Rem Koolhaas Maya Lin Richard Long and James Turrell to name a few Over the last decade the concept of landscape has dramatically changed References to the discipline of landscape architecture can be found in urban planning in projects that reconstruct large disused areas in the design of public spaces parks and private gardens in Land Art and in photography This field has come to greater prominence with the increase in public projects and by keeping pace with new theoretical approaches and design practices This volume will be an invaluable reference for anyone involved in urban planning public art landscape architecture and landscape design
