Romanovsky,2002-05-31 Concurrency in Dependable Computing focuses on concurrency related issues in the area of dependable computing Failures of system components be hardware units or software modules can be viewed as undesirable events occurring concurrently with a set of normal system events Achieving dependability therefore is closely related to and also benefits from concurrency theory and formalisms This beneficial relationship appears to manifest into three strands of work Application level structuring of concurrent activities Concepts such as atomic actions conversations exception handling view synchrony etc are useful in structuring concurrent activities so as to facilitate attempts at coping with the effects of component failures Replication induced concurrency management Replication is a widely used technique for achieving reliability Replica management essentially involves ensuring that replicas perceive concurrent events identically Application of concurrency formalisms for dependability assurance Fault tolerant algorithms are harder to verify than their fault free counterparts due to the fact that the impact of component faults at each state need to be considered in addition to valid state transitions CSP Petri nets CCS are useful tools to specify and verify fault tolerant designs and protocols Concurrency in Dependable Computing explores many significant issues in all three strands To this end it is composed as a collection of papers written by authors well known in their respective areas of research To ensure quality the papers are reviewed by a panel of at least three experts in the relevant area

ECOOP 2011--Object-Oriented

Programming Mira Mezini,2011-07-18 This book constitutes the refereed proceedings of the 25th European Conference on Object Oriented Programming ECOOP 2011 held in Lancaster UK in July 2011 The 26 revised full papers presented together with three keynote lectures were carefully reviewed and selected from a total of 100 submissions The papers cover topics such as empirical studies mining understanding recommending modularity modelling and refactoring aliasing and ownership

as well as memory optimizations

ECOOP 2004 - Object-Oriented Programming Martin Odersky, 2004-11-24 ECOOP is the premier forum in Europe for bringing together practitioners, researchers and students to share their ideas and experiences in a broad range of disciplines woven with the common thread of object technology. It is a collage of events including outstanding invited speakers, carefully refereed technical papers, practitioner reports reflecting real world experience, panels, topic focused workshops, demonstrations and an interactive posters session. The 18th ECOOP 2004 conference held during June 14-18 2004 in Oslo, Norway represented another year of continued success in object oriented programming both as a topic of academic study and as a vehicle for industrial software development. Object oriented technology has come of age; it is now the commonly established method for most software projects. However, an expanding field of applications and new technological challenges provide a strong demand for research in foundations, design and programming methods as well as implementation techniques. There is also an increasing interest in the integration of object orientation with other software development techniques. We anticipate therefore that object oriented programming will be a fruitful subject of research for many years to come. This year the program committee received 132 submissions of which 25 were accepted for publication after a thorough reviewing process. Every paper received at least 4 reviews. Papers were evaluated based on relevance, significance, clarity, originality and correctness. The topics covered include programming concepts, program analysis, software engineering aspects and components, middleware, verification systems and implementation techniques. These were complemented by two invited talks from Matthias Felleisen and Tom Henzinger. Their titles and abstracts are also included in these proceedings.

Social Computing and Social Media: Experience Design and Social Network Analysis Gabriele Meiselwitz, 2021-07-03 This two volume set LNCS 12774 and 12775 constitutes the refereed proceedings of the 13th International Conference on Social Computing and Social Media SCSM 2021 held as part of the 23rd International Conference HCI International 2021 which took place in July 2021. Due to COVID-19 pandemic the conference was held virtually. The total of 1276 papers and 241 posters included in the 39 HCII 2021 proceedings volumes was carefully reviewed and selected from 5222 submissions. The papers of SCSM 2021 Part I are organized in topical sections named Computer Mediated Communication, Social Network Analysis, Experience Design in Social Computing.

Mastering the Java Virtual Machine Otavio Santana, 2024-02-29 Delve into the inner workings of JVM and explore internals, memory management and performance optimization. Key Features: Uncover the intricacies of JVM from class loading to garbage collection and more. Master JVM memory management for efficient resource use and reduced overhead. Apply JVM knowledge through case studies reinforcing your understanding of internals. Purchase of the print or Kindle book includes a free PDF eBook. Book Description: Mastering the Java Virtual Machine is a comprehensive guide that will take you into the heart of the Java programming language, guiding you through the intricate workings of the Java Virtual Machine (JVM) and equipping you with essential skills to become a proficient Java developer. You'll start by understanding the JVM, exploring its architecture

and how it executes Java code Through detailed explanations and real world examples you ll gain a deep understanding of JVM internals enabling you to write efficient and optimized Java applications As you progress you ll delve into memory management and execution unraveling the complexities of heap and stack management garbage collection and memory profiling You ll learn how memory is allocated and reclaimed in the JVM as well as how to optimize memory usage and identify performance bottlenecks in your applications With this knowledge you ll be able to create Java programs that are not only robust but also highly performant By the end of this Java book you ll have the skills needed to excel in Java programming writing efficient and maintainable code What you will learn Understand JVM architecture and bytecode execution Explore memory management and optimize memory usage Compare and evaluate alternative JVMs like GraalVM Master reflection for dynamic behavior in Java applications Use Java annotation processors for code generation Get to grips with reactive programming principles for scalable applications Who this book is for This book is for Java developers looking to deepen their expertise in the Java Virtual Machine JVM and optimize Java applications for peak performance It is ideal for both intermediate level and seasoned professionals who want to explore specific aspects such as JVM internals memory management threading security and performance tuning **Java: Data Structures and Programming** Liwu Li,2012-12-06

This book is written for practitioners of software development and for students of computer science who are interested in using the Java language to construct data structures The book assumes general knowledge of computer programming but no experience of Java programming or object modeling for the readers It introduces the Java language and object model by going through examples of data modeling The book emphasizes programming skills for developing various types of data structure and fundamental techniques for complexity analysis The programming skills are necessary for software development The analysis techniques are needed to ensure performance of programs The author has been responsible for teaching a data structure course for years The book carries out his expectations for proficiency in both programming and complexity analysis from students Several features of the book distinguish it from other books on data structures A challenge for the book is relating the complexity analysis to the Java Virtual Machine which isolates Java programmers from platform issues The book devotes a chapter to discuss the structure of Java class files and the Java Virtual Machine The book presents the problem of maximum flow and implements algorithms in Java to evaluate maximum flow for networks It introduces persistent data structures which may be included by some practitioners in their projects [The Principles of Pleading and Practice in Civil Actions in the High Court of Justice](#) William Blake Odgers,1918 *Tools and Algorithms for the Construction and Analysis of Systems* Nicolas Halbwachs,Lenore Zuck,2005-02-26 ETAPS 2005 was the eighth instance of the European Joint Conferences on Theory and Practice of Software ETAPS is an annual federated conference that was established in 1998 by combining a number of existing and new conferences This year it comprised ve conferences CC ESOP FASE FOSSACS TACAS 17 satellite workshops AVIS BYTECODE CEES CLASE CMSB COCV FAC FESCA FINCO GCW DSE

GLPL LDTA QAPL SC SLAP TGC UITP seven invited lectures not including those that were specific to the satellite events and several tutorials We received over 550 submissions to the five conferences this year giving acceptance rates below 30% for each one Congratulations to all the authors who made it to the final program I hope that most of the other authors still found a way of participating in this exciting event and I hope you will continue submitting The events that comprise ETAPS address various aspects of the system development process including specification design implementation analysis and improvement The languages methodologies and tools which support these activities are all well within its scope Different blends of theory and practice are represented with an inclination towards theory with a practical motivation on the one hand and soundly based practice on the other Many of the issues involved in software design apply to systems in general including hardware systems and the emphasis on software is not intended to be exclusive

Parallel Programming and Applications Peter Fritzson, Leif Finmo, 1995 ZEUS Centres of European Supercomputing is a network for information exchange and co-operation between European Supercomputer Centres During the fall of 1994 the idea was put forward to start an annual workshop to stimulate the exchange of ideas and experience in parallel programming and computing between researchers and users from industry and academia The first workshop in this series the ZEUS 95 Workshop on Parallel Programming and Computation is organized at Linköping University where the Swedish ZEUS centre NSC National Supercomputer Centre is located This is open for all researchers and users in the field of parallel computing

Introduction to Corrections Robert D. Hanser, 2023-05-12 Introduction to Corrections provides students with a comprehensive foundation of corrections that is practitioner driven and grounded in modern research and theoretical origins Experienced correctional practitioner scholar and author Robert D Hanser shows students how the corrections system works from classification security and treatment to demonstrating how and why correctional practices are implemented The Fourth Edition includes a special emphasis on the role of technology in each chapter new topics on medical care in jail female drug offenders and controversies around the death penalty and the impact of the COVID 19 pandemic on correctional practices Data and examples drawn from federal government documents along with exercises that reinforce concepts in the text further aid student learning
