Modern Uses of Multiple-Valued Logic M. Dunn, G. Epstein, 2012-12-06 This is a collection of invited papers from the 1975 International Symposium on Multiple valued Logic Also included is an extensive bibliography of works in the field of multiple valued logic prior to 1975 this supplements and extends an earlier bibliography of works prior to 1965 by Nicholas Rescher in his book Many Valued Logic McGraw Hill 1969 There are a number of possible reasons for interest in the present volume First the range of various uses covered in this collection of papers may be taken as indicative of a breadth which occurs in the field of multiple valued logic as a whole the papers here can do no more than cover a small sample question answering systems analysis of computer hazards algebraic structures relating to multiple valued logic algebra of computer programs fuzzy sets Second a large part of the interest in such uses and applications has occurred in the last twenty even ten years It would be too much to expect this to be reflected in Rescher's 1969 book Third in the 1970's a series of annual symposia have been held on multiple valued logic which have brought much of this into a sharp focus The 1971 and 1972 symposia were held at the SUNY at Buffalo the 1973 symposium at the University of Toronto and the 1974 symposium at West Virginia University Papers from these symposia are included in the bibliography which may be found in an appendix of this book

Fractional Programming I.M. Stancu-Minasian, 2012-12-06 Mathematical programming has known a spectacular diversification in the last few decades This process has happened both at the level of mathematical research and at the level of the applications generated by the solution methods that were created To write a monograph dedicated to a certain domain of mathematical programming is under such circumstances especially difficult In the present monograph we opt for the domain of fractional programming Interest of this subject was generated by the fact that various optimization problems from engineering and economics consider the minimization of a ratio between physical and/or economical functions for example cost/time cost/volume cost/profit or other quantities that measure the efficiency of a system For example the productivity of industrial systems defined as the ratio between the realized services in a system within a given period of time and the utilized resources is used as one of the best indicators of the quality of their operation Such problems where the objective function appears as a ratio of functions constitute fractional programming problem Due to its importance in modeling various decision processes in management science operational research and economics and also due to its frequent appearance in other problems that are not necessarily economical such as information theory numerical analysis stochastic programming decomposition algorithms for large linear systems etc the fractional programming method has received particular attention in the last three decades

Modern Romania Tom Gallagher, 2008-03 Since the 1989 fall of Communism in Eastern Europe Romania arguably the most regimented of states in the Soviet bloc has struggled with the transition from totalitarian state to democratic nation In this insightful examination of modern Romania Tom Gallagher provides an overview of Romania s unique political and social history focusing on both its national identity as well as the legacy of Soviet rule Gallagher provides an in depth look at Romania since 1989 focusing on the government s attempts at economic reform engagement with democracy problems with corruption among the ruling elite

as well as the weakness of civil society and the resilience of implacable expressions of nationalism Ultimately Gallagher argues that thus far democracy has essentially failed in Romania In fact he warns that Romania is on its way to becoming one of the most unequal states in Europe and quite possibly a future trouble spot unless efforts to resume much needed reforms are undertaken *Revue Roumaine de Géologie, Géophysique Et Géographie* ,1983 Handbook of Global Optimization R. Blind Spots in the Spotlight Raluca Iacob, 2022-06-17 This book brings under a magnifying glass a little explored but significant topic the communications changes of the National Bank of Romania after 2008 Given the similarities and differences between central banks mechanisms and practices adopted its applicability and impact for other actors are incontestable The research incorporates valuable details on how the National Bank of Romania's communication changed during the Great Recession of 2008 as well as insightful data about the way in which different categories of public and media perceived this change The timeliness and significance of this research are noticeable as the central banks already entered a new era of communication challenges triggered by the Covid 19 pandemic and recently by the Russia Ukraine war Lessons from the past can contribute to what researchers name the second revolution in communication focusing on opening the central banks to the public and regaining trust especially in such a difficult period

Military Strategies of the New European Allies Håkan Edström, Jacob Westberg, 2022-12-30 This book analyses how and to what extent ex communist states have adjusted their defence strategies since joining the EU and NATO and how differences and similarities between their strategies can be explained Between 1999 and 2013 four phases of enlargement took place when the European Union EU and NATO allowed 11 new former communist states to enter both organisations These states share some common attributes and experiences related to strategic culture and common experiences during the Cold War era that can potentially explain similarities in behaviour and preferences among them However the strategic adjustments among these states are far from uniform In an effort to explain these differences the book introduces three intervening variables 1 differences in relative power and position in the international system 2 national geographical characteristics and 3 historical experiences related to formative periods of state building processes as well as wars and armed conflicts Empirically the book strives to present and analyse the defence strategies of each of the new allies by conducting a structured focused comparison of official strategic documents from the twenty first century for each of the 11 cases Theoretically and methodologically it introduces an analytical framework enabling us to explain both similarities and differences in the formulation of the strategies of the 11 states and to shed light on their external and internal efforts to promote their strategic interest by operationalising the dependent variable defence strategy The analytical framework combines elements of structural realism with classical realism and constructivist research on unit level characteristics

Periphery Dorothee Bohle, Béla Greskovits, 2012-07-27 With the collapse of the Council for Mutual Economic Assistance in 1991 the Eastern European nations of the former socialist bloc had to figure out their newly capitalist future Capitalism they found was not a single set of political economic relations Rather they each had to decide what sort of capitalist nation to become In Capitalist Diversity on Europe's Periphery Dorothee Bohle and Béla Greskovits trace the form that capitalism took in each country the assets and liabilities left behind by socialism the transformational strategies embraced by political and technocratic elites and the influence of transnational actors and institutions They also evaluate the impact of three regional shocks the recession of the early 1990s the rolling global financial crisis that started in July 1997 and the political shocks that attended EU enlargement in 2004 Bohle and Greskovits show that the postsocialist states have established three basic variants of capitalist political economy neoliberal embedded neoliberal and neocorporatist The Baltic states followed a neoliberal prescription low controls on capital open markets reduced provisions for social welfare The larger states of central and eastern Europe Poland Hungary and the Czech and Slovak republics have used foreign investment to stimulate export industries but retained social welfare regimes and substantial government power to enforce industrial policy Slovenia has proved to be an outlier successfully mixing competitive industries and neocorporatist social inclusion Bohle and Greskovits also describe the political contention over such arrangements in Romania Bulgaria and Croatia A highly original and theoretically sophisticated typology of capitalism in postsocialist Europe this book is unique in the breadth and depth of its conceptually coherent and empirically rich comparative analysis
