Science Periodicals in Nineteenth-Century Britain Gowan Dawson, Bernard Lightman, Sally Shuttleworth, Jonathan R. Topham, 2020-03-02 Periodicals played a vital role in the developments in science and medicine that transformed nineteenth century Britain Proliferating from a mere handful to many hundreds of titles they catered to audiences ranging from gentlemanly members of metropolitan societies to working class participants in local natural history clubs In addition to disseminating authorized scientific discovery they fostered a sense of collective identity among their geographically

dispersed and often socially disparate readers by facilitating the reciprocal interchange of ideas and information As such they offer privileged access into the workings of scientific communities in the period The essays in this volume set the historical exploration of the scientific and medical periodicals of the era on a new footing examining their precise function and role in the making of nineteenth century science and enhancing our vision of the shifting communities and practices of science in the period This radical rethinking of the scientific journal offers a new approach to the reconfiguration of the sciences in nineteenth century Britain and sheds instructive light on contemporary debates about the purpose practices and price of scientific journals Scientific and Technical Aerospace Reports ,1992 **MahaManan: The only scientific way to real**

Towards a Theory of Spacetime Theories Dennis Lehmkuhl, Gregor Schiemann, Erhard Scholz, 2017-01-05 This contributed volume is the result of a July 2010 workshop at the University of Wuppertal Interdisciplinary Centre for Science and Technology Studies which brought together world wide experts from physics philosophy and history in order to address a set of questions first posed in the 1950s How do we compare spacetime theories How do we judge objectively which is the best theory Is there even a unique answer to this question The goal of the workshop and of this book is to contribute to the development of a meta theory of spacetime theories Such a meta theory would reveal insights about specific spacetime theories by distilling their essential similarities and differences deliver a framework for a class of theories that could be helpful as a blueprint to build other meta theories and provide a higher level viewpoint for judging which theory most accurately describes nature But rather than drawing a map in broad strokes the focus is on particularly rich regions in the space of spacetime theories This work will be of interest to physicists as well as philosophers and historians of science working with or interested in General Relativity and or Space Time and Gravitation more generally

Calvino's Combinational Creativity Elizabeth Scheiber, 2016-02-08 Calvino s Combinational Creativity examines the various ways combinatory processes influence the work of the Italian author Italo Calvino Comprising chapters by six literary scholars the volume asserts that the Ligurian

writer's creativity often stems from his contemplation of literature even as it investigates the intersection of his work with poets, writers and literary movements. Each chapter explores a different aspect of Calvino's creativity. Natalie Berkman examines Calvino as a reader of Ariosto and provides an analysis of mathematical combinations inspired by Vladimir Propp in *Il castello dei destini incrociati*. Discussing the poetic and scientific influence of the Argentine writer Julio Cortázar on Calvino, Sara Ceroni then presents *Palomar* as a modernist work of epiphanies. This is followed by two chapters investigating different influences on *Cosmicomics*. Elio Baldi demonstrates how Calvino's collection of stories appropriates various conventions of the science fiction genre while Elizabeth Scheiber provides a close reading of two tales to show how Calvino uses science as a metaphor to comment on the poetics of Italian authors. Gadda, D'Annunzio, Ungaretti and Montale. Cecilia Benaglia then proposes Calvino as a reader of Gadda who served not only as an aesthetic influence but also as an epistemological one. Finally, juxtaposing Calvino with his contemporary Umberto Eco, Sebastiano Bazzichetto examines the two authors' use of figures of speech as ways of constructing labyrinths. Calvino's *Combinatorial Creativity* takes Calvino studies in new directions as it rethinks how the author's work can be classified and delves into the sources of his inspiration. *The Eclectic Magazine of Foreign Literature, Science, and Art*, 1904

Time, Progress, Growth and Technology Filipe Duarte Santos, 2020-09-18 This book addresses the current challenges of sustainable development including its social, economic and environmental components. The author argues that we need to develop a new concept of time based on inter-generational solidarity which focuses both on the long and the short term. The evolution of man's notions of time are analyzed from prehistory to modern times showing how these concepts shape our worldviews, our ecological paradigms and our equilibrium with our planet. Practical approaches to dealing with the major medium and long-term sustainability challenges of the 21st century are presented and discussed. This is a thought-provoking and timely book that addresses the main global socioeconomic and environmental challenges facing the current and future generations using science-based analysis and perspectives. It presents an historical narrative of the advent of progress, economic growth and technology and discusses the structural changes needed to co-create sustainable pathways. It provides hope for our future on Earth, mankind's common home.

António Guterres, Secretary General of the United Nations. This is an amazing, almost mind-boggling book. The author takes a look at the true whole, i.e. the development of the human enterprise since its very beginning. This enterprise is evidently a possibility under the boundary conditions of cosmological dynamics and natural evolution but evidently also a highly improbable one. It is all but a miracle that the Earth system in its present form exists and happens to support a technical civilization. Will this civilization last long? Will it transform itself into something even more exceptional or will it perish in disgrace? Santos dares to address these

grandest of all questions equipped with a unique transdisciplinary wisdom drawing on physics cybernetics geology biology economics anthropology history and philosophy And he dares to dive into the deepest abysses of thinking where categorial monsters like time and progress lurk Thereby he takes us on fascinating journey during which we perceive and grasp things we have never seen and understood before One of the best essays I have ever read John Schellnhuber founding director of the Potsdam Institute for Climate Impact Research PIK and former chair of the German Advisory Council on Global Change
