Global Ageing in the Twenty-First Century Zachary Zimmer, 2016-04-22 Population ageing a growth in the proportion of a population that is in older age is now occurring in every region and nearly every country of the world Indeed the growth of older populations is among the important global phenomena of the twenty first century It poses both opportunities and challenges for societies and policy makers but these are far from uniform worldwide Dynamic factors are at work impacting on how ageing will influence people places and policies and there are large variations in the rate and timing of population ageing across countries owing to differing social health and economic circumstances and a variety of policy options from which to choose Given this variation in the context of global ageing as a backdrop this edited book focuses on three overarching themes that are among the most critical to understand if societies are to age successfully in the twenty first century and beyond Healthy ageing and health care the ageing workforce retirement and the provision of pensions shifting intergenerational relations These three themes are cross cut by other dimensions that are intertwined with the dynamic processes of ageing such as immigration emigration contrasting policy regimes and global and national

Katz,2001 *Readers Reading and Librarians* reaffirms librarians enthusiasm for books and readers in the midst of the evolution of libraries from reading centers to information centers where librarians are now Web masters information scientists and media experts It explores the future of the book as a medium and examines reasons for the decline in pleasure reading and the need for librarians to sponsor book groups With nearly two hundred open ended interviews with readers who read for pleasure this book looks at how and why they choose or reject certain books **A Public Health Perspective on End of Life Care** Joachim Cohen,Luc Deliens,2012-01-19 Worldwide more than 50 million people die each year and it is estimated on the basis of the conditions leading to death that up to 60% of them could benefit from some form of palliative care It is a public health challenge to ensure that these people can access good palliative or end of life care Pursuing good population health essentially also implies striving for a good enough death and a good quality of care at the end of life Safeguarding a good quality of the end of life for patient populations for whom it is appropriate requires a public health approach In most developed countries

ageing populations that increasingly die from chronic diseases after a prolonged often degenerative dying trajectory make up the public health challenges for palliative care. The very large baby boom generation will soon reach old age and can be expected to pose strong demands regarding the circumstances and care at their end of life. Only by applying a public health approach to palliative care instead of individual patient perspectives can societies successfully help to organize and plan end of life care in accordance with these aspirations. A Public Health Perspective on End of Life Care presents a synthesis and overview of relevant research and empirical data on the end of life that can bear a basis for a more systematic public health of the end of life. The book focuses on population health rather than clinical interventions or other aspects of individual health and discusses studies using different methodologies not only epidemiological research. The focus is on the quality of the end of life of populations in particular from social sciences, environmental sciences and humanities perspectives.
